

**PRELIMINARY DISTRIBUTION SYSTEM MATERIALS
INVENTORY (PDSMI) INTERIM UPDATE**

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended; specifically, R 325.11604(c)(i) of the 1979 Administrative Code, which requires community water supplies to submit a PDSMI. This form serves as an optional submission for water supplies that wish to update their previously submitted PDSMI prior to the submission of their Complete Distribution System Materials Inventory, which is due by January 1, 2025.

Water Supply: _____ **WSSN:** _____ **County:** _____

1. Estimated Number of Service Connections by Service Line Material.

A service line includes any section of pipe from the water main to the building plumbing at the first shut-off valve inside the building, or 18 inches inside the building, whichever is shorter. For Manufactured Housing Community water supplies, connections to units (risers) are considered service lines for the purpose of this inventory.

Service Line Material (see page 3 for explanation of each category below)	Estimated Number of Service Lines
a) Any Portion Contains Lead	
b) Contains Galvanized Previously Connected to Lead*	
c) Unknown - Likely Contains Lead	
d) Unknown - Likely Does <u>not</u> Contain Lead	
e) Unknown - Material(s) Unknown (no information on likelihood of lead)	
f) Contains neither Lead nor Galvanized Previously Connected to Lead	
Total Number of Potable Service Lines This is the sum of rows a) through f) above and should equal the total number of potable water service lines in your water supply (residential, commercial, industrial, other).	

*If a galvanized line is still connected to lead, it is a lead service line and must be counted in row a).

2. Describe your inventory updates and provide any other comments.

Certification of Preliminary Distribution System Materials Inventory Interim Update

I certify that the information herein is accurate and complete to the best of my knowledge and information.

PDSMI INTERIM UPDATE FORM INFORMATION

The purpose of this “Interim Update” form is to provide a format for water supplies to submit an **optional** update to the information provided in their PDSMI submittal. For a copy of the original Preliminary Distribution System Materials Inventory Reporting Form and instructions, visit Michigan.gov/LCR.

Service Line Materials Table

The service line materials table summarizes potable water service connections by broad material categories. A service line includes any section of pipe from the water main to the first shut-off valve inside the building or up to 18 inches inside the building, whichever is shorter. Report the number of service lines in each of the following categories:

- **Any Portion Contains Lead:** Any portion of a service line that is made of lead or any lead pigtail, lead gooseneck, or other lead fitting that is connected to the service line, or both. In short, any service line that contains any lead.
- **Galvanized Previously Connected to Lead:** A galvanized service line that WAS previously connected to a lead service line, gooseneck, or pigtail. If a galvanized line is still connected to lead, it is considered a lead service line and must be counted in the category above.
- **Unknown:** While a water supply may not be certain of the materials content of some service lines, they may have information that indicates the likelihood of a service line containing lead. For planning purposes, it is helpful to record this information. Therefore, three categories of unknown service lines are provided.
 - **Unknown - Likely Contains Lead:** While not known for certain, service lines the water supply believes are likely to contain lead.
 - **Unknown - Likely Does NOT Contain Lead:** While not known for certain, service lines the water supply believes are NOT likely to contain lead.
 - **Unknown – Material(s) Unknown:** Service line materials are fully unknown. Supply has no information regarding the likelihood of lead being present in the service line.
- **Contains neither Lead nor Galvanized Previously Connected to Lead:** Service lines that are known to contain NO lead in any portion. These typically include copper, plastic, cast iron, ductile iron, or galvanized that was NEVER connected to lead. If a galvanized service line was previously connected to lead, it should not be included in this category, but rather included with the second bullet above.
- **Total Number of Potable Service Lines:** Total number (sum) of service lines in all categories above. This should equal the total number of potable water service lines in your water supply (residential, commercial, industrial, other).

All physically connected potable water services must be included in the table even if there is no current active account. Complete the table to the best of your ability based on your available records and/or knowledge of the system. If you do not know the answer, use the unknown category. **You will not be penalized for acknowledging you do not know.** The purpose of the PDSMI and interim PDSMI updates is to understand current knowledge about service line materials.
