Today's Speakers

- Danny Falk, Program Manager, IREC
- John Freeman, Executive Director, GLREA
- Patrick Pitman, Pima County, Arizona/Chief Building Inspector

Streamlining Solar Permitting and Benefits of SolSmart for Michigan's Local Governments – SolSmart & SolarAPP+

Danny Falk, Interstate Renewable Energy Council, 10/17/23

Local Government Action is Important

- 65% of the cost of a solar PV system is not related to hardware. These “soft costs” can be reduced action at the local level, including:
 - Streamlining permitting and inspection;
 - Supporting consumer education;
 - Leading by example;
 - Facilitating group purchasing;
 - Filling gaps in financing; and more!

Introduction to SolSmart

What is it?

SolSmart is a national designation and technical assistance program that has helped over 450 local governments make it faster, easier, and more affordable for residents and businesses to go solar.

A SolSmart designation:

- Recognizes communities that have taken key steps to address local barriers to solar energy and foster the growth of mature local solar markets.
- Demonstrates that a community is “open for solar business,” making it attractive to solar companies and other business development.

Michigan SolSmart Communities

5 communities in Michigan have been designated under SolSmart

- 3 Silver: Grand Rapids, Ann Arbor, Lansing
- 2 Gold: Ypsilanti, East Lansing

What is SolSmart's Role in Solar Development?

- SolSmart helps local governments take action to remove barriers to solar energy growth and make it easier for residents and businesses to go solar
- The program offers **no-cost technical assistance and resources** that help communities become national solar energy leaders
- SolSmart is committed to meeting the goals of the federal **Justice40** program to provide equitable opportunities for underserved communities
- SolSmart helps communities reduce “soft costs” — the costs of solar development that are unrelated to hardware

Criteria and Designation

- Criteria Categories Include:
 - Permitting and Inspection
 - Planning and Zoning
 - Community Engagement
 - Market Development
 - And More!

"The SolSmart program created a national benchmark for communities to reach and provided the guidance and resources to support adoption of best practices in solar policy."– Maurice Jones, City Manager, Charlottesville, Virginia

Designation Structure

There are four levels of designation: Bronze, Silver, Gold, and (new in 2023) Platinum. Communities achieve designation by meeting prerequisites (listed below for each level) as well as meeting other elective criteria.

Permitting Best Practices

Best Practices

1. Post an online checklist detailing the required permit(s), submittals, and steps of your community's permitting process for residential rooftop solar PV. (PI-1)
2. Post an online statement confirming a three-business day turnaround time for residential rooftop solar PV. (Required for Gold) (PI-4)
3. Demonstrate pathway for instant/automatic approval of residential rooftop solar PV systems (e.g., using SolarAPP+) (PI-5)

Permitting Best Practices

Best Practices

1. Post an online checklist detailing the required permit(s), submittals, and steps of your community's permitting process for residential rooftop solar PV. (PI-1)
2. Post an online statement confirming a three-business day turnaround time for residential rooftop solar PV. (Required for Gold) (PI-4)
3. Demonstrate pathway for instant/automatic approval of residential rooftop solar PV systems (e.g., using SolarAPP+) (PI-5)

Community Spotlight: Ypsilanti

- Designated SolSmart Gold in 2017
- Low-income housing, fire station, and other solar installations
- City expectations were \$6,000 annually in savings for solar fire station installation and a 5-year payback period

Introduction to SolarApp+

What is it?

SolarApp+ is a standardized plan review software that can run compliance checks and process building permit approvals for eligible rooftop solar systems

SolarApp+ was developed to..

- Accelerate rooftop solar adoption
- Make it easier for local governments to quickly and safely approve rooftop PV projects for installation

Summary Performance in 2022

- 31 jurisdictions in Arizona, California, Texas, and Virginia had implemented SolarApp+
- These jurisdictions issued a total of 11,092 permits

Shorter project timelines

A typical SolarAPP+ project is permitted, installed, and inspected around 13 business days sooner than traditional projects
Based on differences in median durations

Staff time savings

NREL estimates SolarAPP+ saved around 9,900 hours of jurisdiction staff time through automated permit reviews in 2022

Potential inspection benefits (further research required)

SolarAPP+ projects have been about 29% less likely to fail inspections than traditional projects
Based on data from 12 jurisdictions

SolarAPP+ Flow

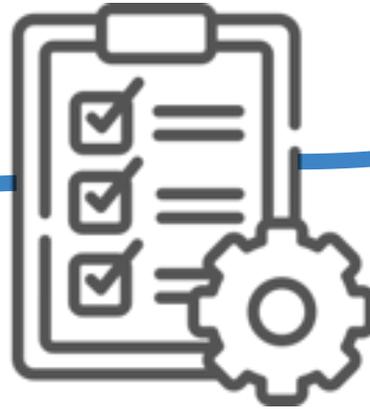

Installer submits an application with design specifications through SolarAPP

1

2

SolarAPP checks the application to ensure the system design is code compliant

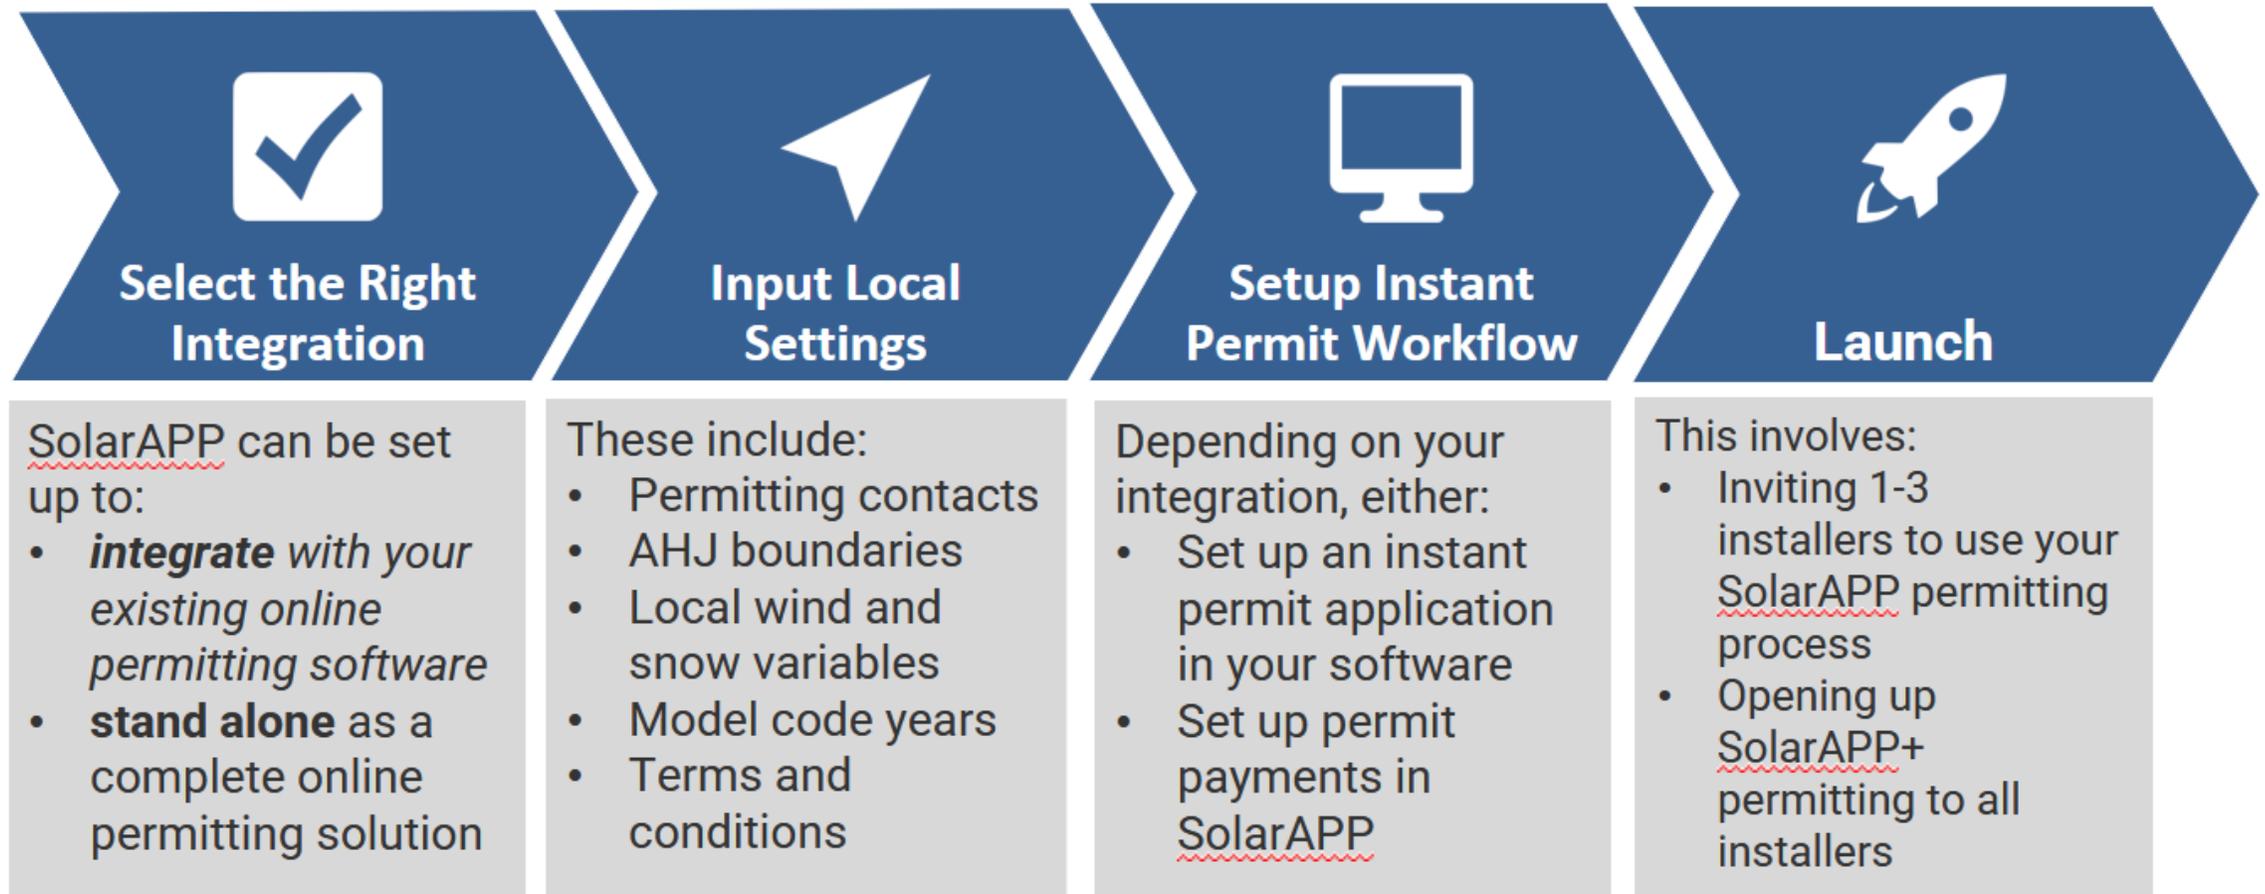

3

Code compliant applications are issued a permit instantly after fee payment

Four Steps to Adopting SolarAPP=

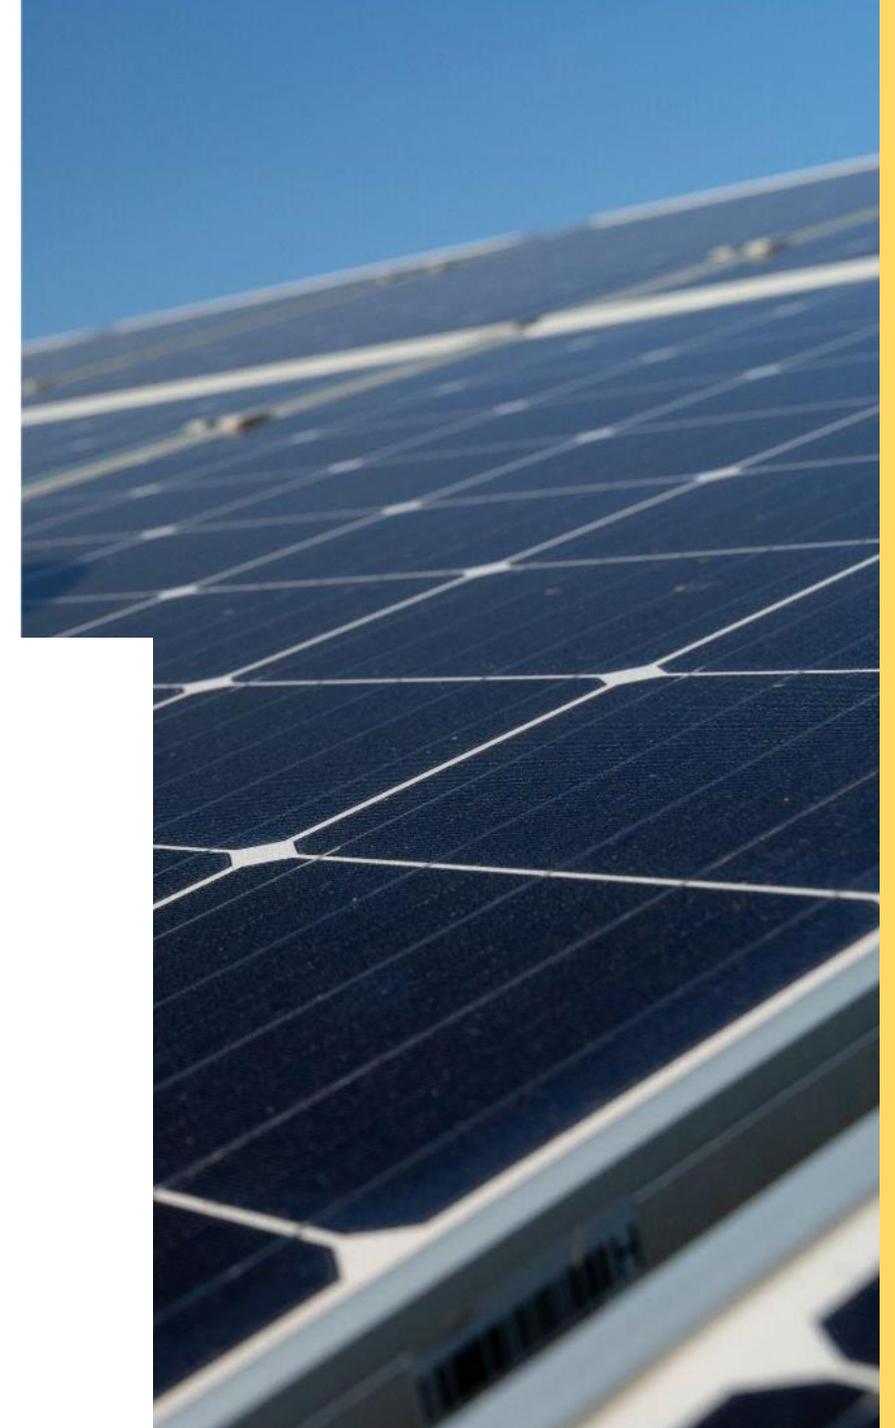

How Can Communities Enroll?

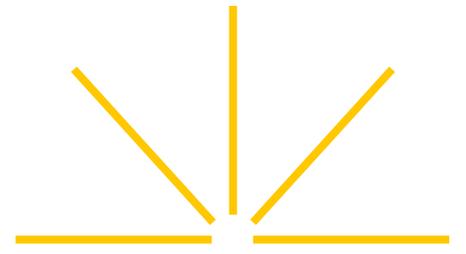

This screenshot shows the top navigation bar of the SOLSMART website. On the left is the SOLSMART logo with the tagline "NATIONALLY DISTINGUISHED. LOCALLY POWERED." Below the logo is a dark grey bar containing the text "Enter your email to receive monthly updates in" followed by a right-pointing arrow. To the right of this bar is a "LOGIN" link. The main navigation menu includes "ABOUT SOLSMART", "OUR COMMUNITIES", "RESOURCES", and a prominent yellow "JOIN SOLSMART" button. A red arrow points from the "OUR COMMUNITIES" link towards the "JOIN SOLSMART" button. A search icon is located on the far right of the navigation bar.

This screenshot shows the top navigation bar of the SolarAPP+ website. On the left are the SolarAPP+ logo and the NREL logo with the tagline "transforming ENERGY". The navigation menu includes "For Jurisdictions", "For Installers", "About SolarAPP+", "Solar TRACE", and a blue "Register" button. A red arrow points from the "Solar TRACE" link towards the "Register" button.

GLREA Solarize, SolSmart, SolarApp+ and Guidebook

John Freeman, Executive Director
October 17, 2023

GLREA

The Great Lakes Renewable Energy Association (GLREA) is a non-profit organization of solar energy advocates who support the expansion and adoption of renewable energy in Michigan.

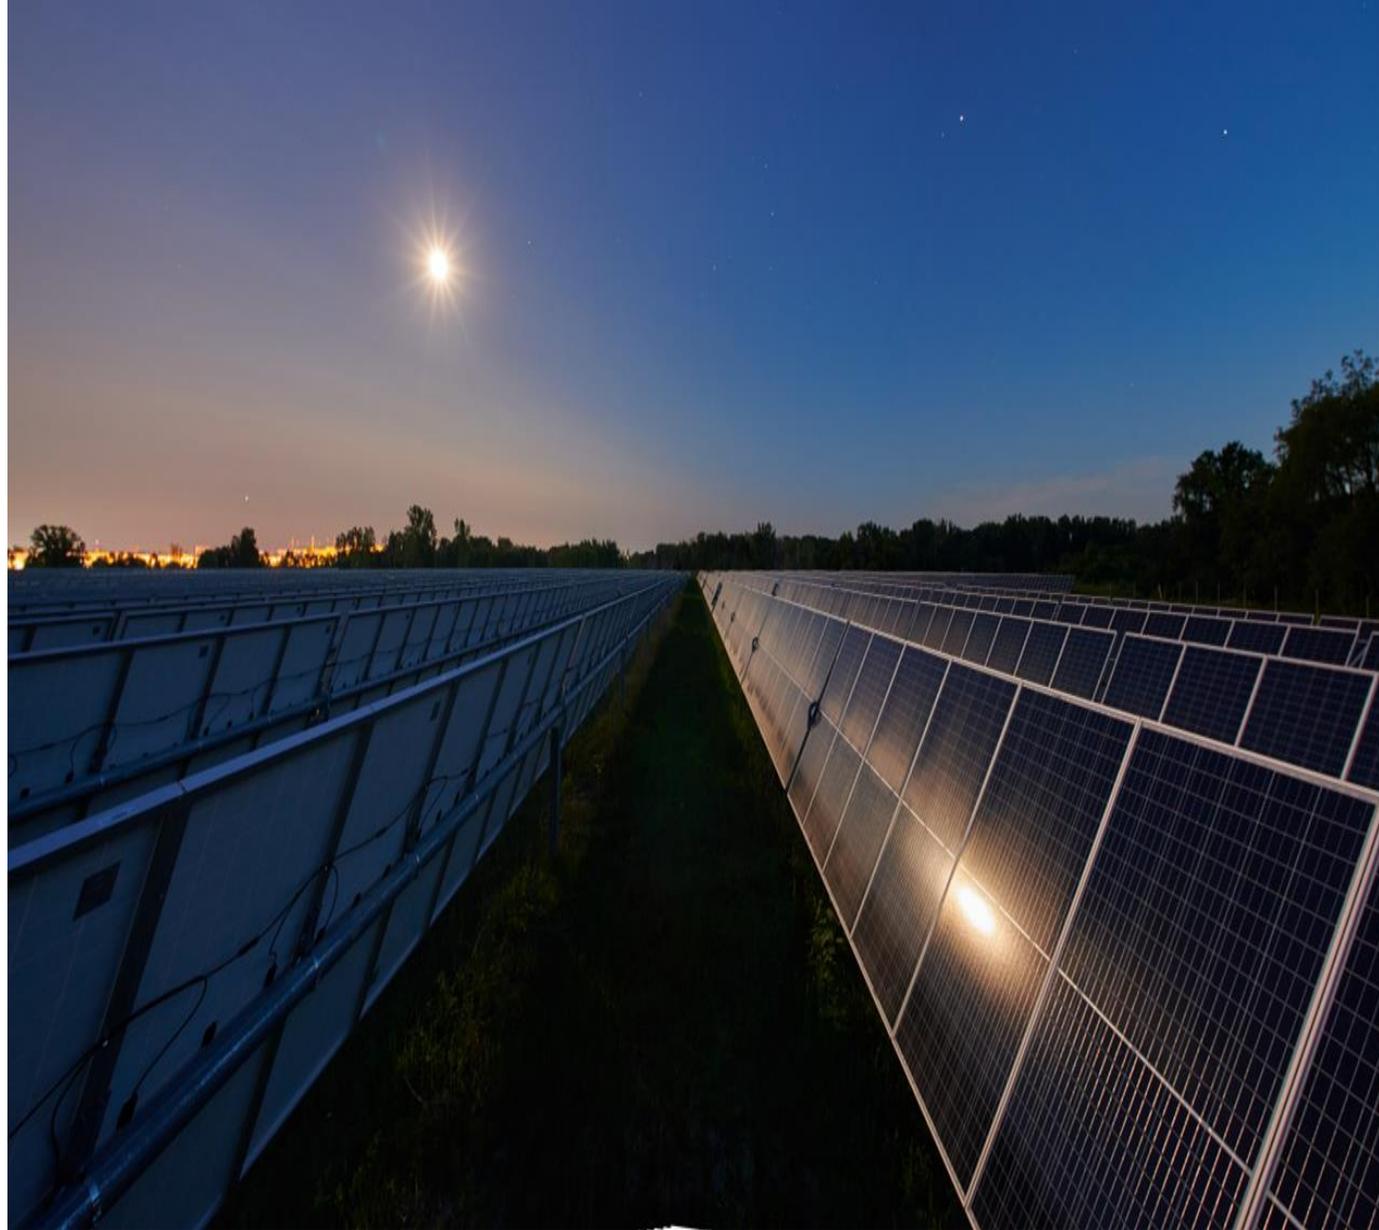

- GLREA's mission is to educate and enable homeowners, farmers, and businesses to save money and protect our environment by installing a renewable energy system and to establish policies that support the expansion of renewable energy in Michigan.
- Become a member or learn more by visiting [GLREA.org](https://www.GLREA.org)

What is Solarize?

How It Works:

- Community based group-buy program that reduces the cost of buying solar.
- Host/Organizer brings together interested people for a meeting
- At the Meeting, GLREA works with installer/s to educate about the program and the benefits of solar

Interested people can get a free estimate!

Group Buy Example

Group Buy discounts are based on numbers:

- 5% discount if 3+ new arrays
- 10% discount if 7+ new arrays
- 15% discount if 10+ new arrays

Group Buy reduces Price per Watt Average:
PPW:\$2.50-\$2.70/watt with some outliers
above and below

- Individuals are free to get other bids!
- Vetting Installers

GLREA Solarize Locations

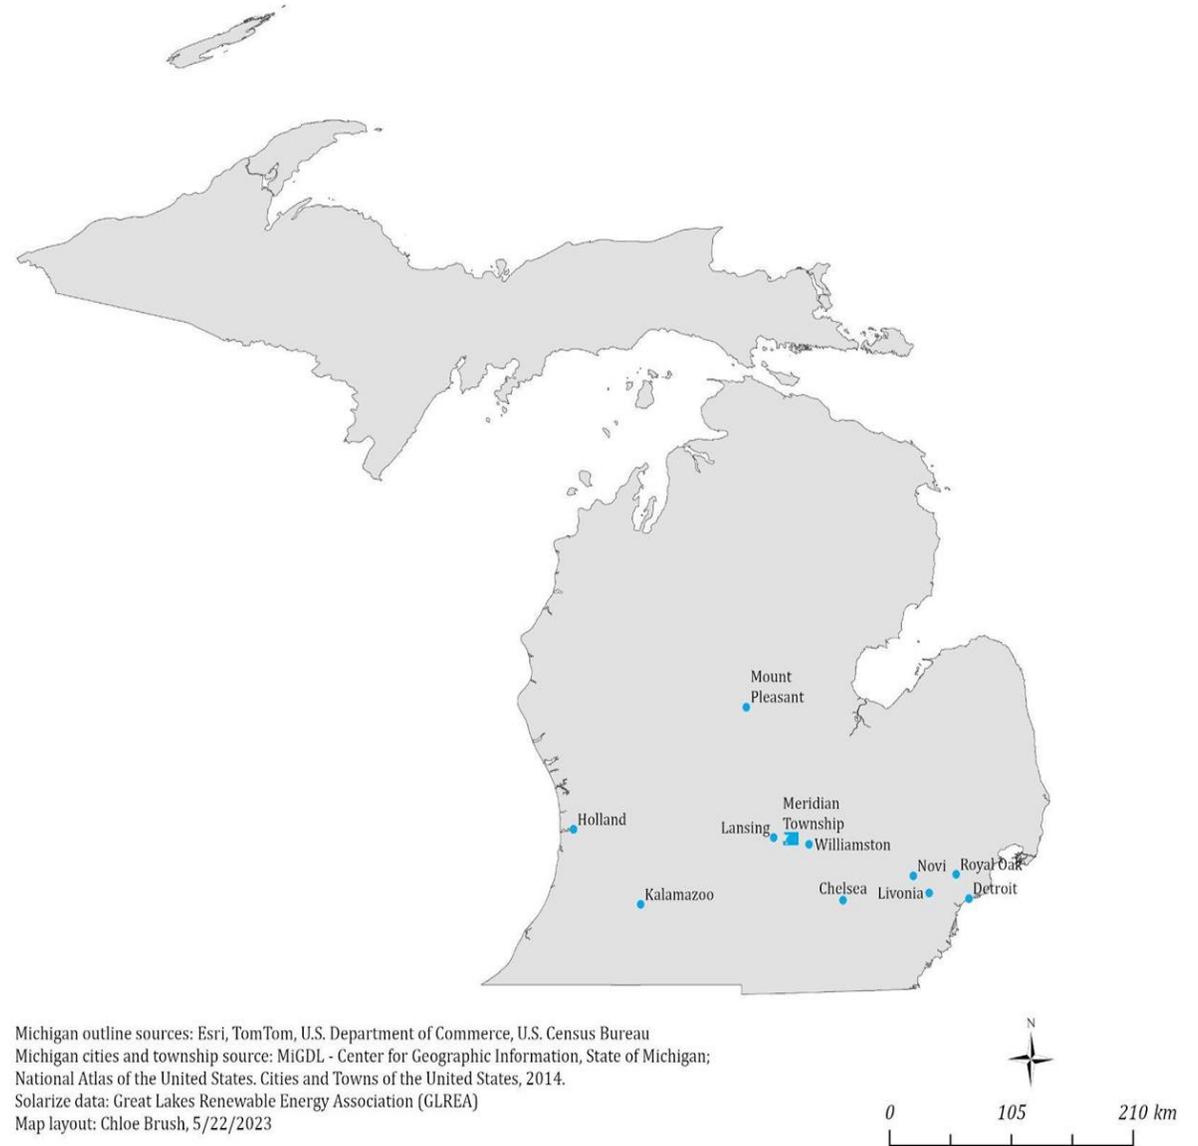

As of March 2022

29 Solarize Meetings

410 Participants

50+ Sales

370+ Kw's of New Sola

SolSmart and SolarAPP+

SolSmart

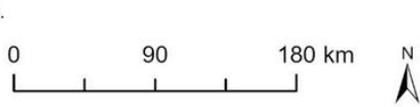

- Program that:
 - Provides jurisdictions free technical assistance on implementing solar infrastructure
 - Speeds up the approval process to build new solar projects
 - Gives communities a nationally recognized designation (Bronze, Silver, Gold, Platinum)

SolSmart Cities in Michigan

Base layer: GTC Equalization/GIS, Esri, HERE, Garmin, FAO, NOAA, USGS, EPA, NPS
Cities layer: National Atlas of the United States. (2013). Cities and Towns of the United States, 2014.

Source: <https://www.energy.gov/eere/articles/eere-success-story-solarapp-rips-red-tape-approval-process-rooftop-solar-panels>

2022 Statistics

- Eliminated **134,000 days** of delays for solar adoption
- 2021-2022: communities utilizing SolarAPP+ grew from **13 to 31**
 - 90 communities testing the app
- Shortens project timelines by **13 business days**
- Projects were **29% less likely to fail inspections** than traditionally permitted projects
- Processed **11,000 permits** in 2022
 - 300% increase from 2021
 - **10,000 hours** of staff time saved

How SolSmart and SolarAPP+ Work Together

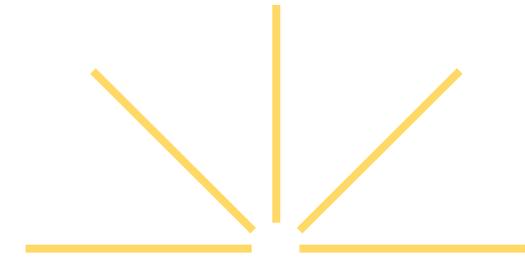

- SolarAPP+ streamlines and accelerates a jurisdiction's SolSmart designation process
- SolarAPP+ gives jurisdictions a significant number of required credits for SolSmart
 - Platinum designation requires a system for instant approval of residential rooftop solar
 - Governments receive 5 SolSmart credit points for simply receiving a SolarAPP+ demonstration

Michigan Solar Communities Guidebook

- A Practical Guide for Solar Energy Advocates and Local Units of Government
 - Purpose: To help Local Units of Government, Organizations and Individuals learn about solar and geothermal energy, and be able to support the deployment of it.
- Made original graphics and maps
- Examples of Chapters:
 - The Deployment of Renewable Energy in Michigan
 - Community Solar in Michigan
 - Community Solar Case Studies
 - GLREA Solarize Michigan
 - Solar Energy – Return on Investment

 Date/Time: 2023-10-13 11:47:00
 Permit Address: 8873 PANTANO BLUFF DR, TUCSON AZ 85730
 Actual Location: 8868 E Pantano Bluff Dr, Tucson, AZ 85730, USA
 Coordinates: 32.17162351948922 -110.8029092295808
 Comments: DC conduit run
 Full resolution image: <https://photos.comcast.net/116701662716ec5a3b0d4663>

Inspection Checklist

Address: 8873 E Pantano Bluff Dr
Tucson, AZ 85730
Approval ID: SA20230927-9-1048-573-A
AHJ: City of Tucson, AZ / Pima County, AZ

Scope of work: Installation of a roof-mounted 8.2 DC kW photovoltaic system.

General Guidelines

The installer shall follow the manufacturer's instructions for all installed equipment and shall have them available at the time of inspection.
 All wire sizes shown are a minimum, unless indicated otherwise, and the installer may upsize them at their discretion.
 All OCPD ratings shown must match the inspection checklist and be installed per the equipment manufacturer's instructions, any ratings that do not match the inspection checklist are valid reasons for inspection failure.
 Conduit sizing to be confirmed at time of inspection. Contractor to provide conduit fill calculations where requested by inspector.
 Where distribution equipment, such as the main service panel or subpanel buses, are fed simultaneously by a primary source(s) of electricity and one or more other power sources, interconnection shall have a method of compliance at each panel board with both a primary source and other power source(s).

Main Service Panel Equipment	Pass
If grounding electrode is rod, pipe or plate, then supplemental electrode is properly installed. Exception: If a single rod, pipe, or plate grounding electrode has a resistance to earth of 25 ohms or less, the supplemental electrode shall not be required.	<input type="checkbox"/>
EGC is installed ensuring continuity to all system components and finally to grounding electrode.	<input type="checkbox"/>
Single Phase Grid Voltage	240 V <input type="checkbox"/>

Busbar 1	Pass
Existing Main Service Panel	<input type="checkbox"/>
Generation sources are connected directly to the Existing Main Service Panel	<input type="checkbox"/>
Existing Main Service Panel busbar ampere rating	225 A <input type="checkbox"/>
Rating of the OCPD protecting the Existing Main Service Panel	200 A <input type="checkbox"/>
Backfeed breakers are at opposite load ends of the panel.	<input type="checkbox"/>
For center fed panels, backfeed breakers are on one side of main breaker and not both in the panel.	<input type="checkbox"/>

Equipment: Point of Connection	Pass
Utility Service Rating	225 A <input type="checkbox"/>

Equipment Point of Interconnection	Pass
	<input type="checkbox"/>

Approval ID: SA20230927-9-1048-573-A

Pima County / City of Tucson

Automated PV Permits

For Residential Rooftop Solar Only

Start

- Prepare your submittal and ensure it meets the automated review requirements
- Go to the SOLAR One Stop web page
- Select the link for the SolarAPP Website

SolarAPP

- Fill out the application, submit documents and plans, and verify contractors license
- SolarAPP reviews design requirements
- SolarAPP will collect a small processing fee
- Approval ID number issued
- Stamped approved plans can then be downloaded

Permitting

- Apply for a electrical/mechanical building permit using Accela ACA
- Fill out application with Approval ID number
- Upload stamped approved plans and documents

Issuance

- Upon payment of the automated permit fee, the permit is issued
- Remote inspections are required for automated solar permits

Inspection

- Contractor will schedule a remote inspection of completed installation
- Upon completion of the inspection, Results will be posted for your retrieval.
