OVERVIEW

This *Responsiveness Summary* for Wolf Five, LLC (Wolf Five), is organized to summarize the comments received by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) regarding the Corrective Measures Implementation and Construction Work Plan (CMI Work Plan) for the corrective measures and redevelopment at the site of the former Wyckoff Steel facility. The CMI Work Plan consists of plans to remove and dispose of contaminated soils at the site and redevelop the currently vacant property for residential housing. The comments were received as a result of an EGLE public comment period held from May 17, 2023, through June 16, 2023. During this comment period, EGLE offered to hold a public hearing, if requested by June 1, 2023, but no request was made.

The former Wyckoff Steel facility was used to manage hazardous waste in the process of its cold drawn steel operations, and the currently vacant site is located at 1000 General Drive, Plymouth, Michigan.

Below are responses from EGLE, to comments received during the public comment period.

COMMENT 1:
A commenter questioned the applicability of investigating for per- and polyfluorinated substances (PFAS) at the site, and if any past investigations had been done.

RESPONSE:
The EGLE project team reviewed past investigations and site activities, and determined that no past investigations for PFAS contamination were done at the site given the absence of evidence that PFAS was used in the processes associated with cold drawing steel.

COMMENT 2:
A recommendation was made by EGLE's Remediation Advisory Team to address off-site migration of contaminated groundwater/ provide documentation that the contamination is not migrating off site.

RESPONSE:
Wolf Five updated the CMI Work Plan to address this recommendation.

COMMENT 3:
A recommendation was made by EGLE's Remedial Advisory Team to include or reference a Health and Safety Plan in the CMI Work Plan.

RESPONSE:
Wolf Five updated the CMI Work Plan to address this recommendation.
