📖 EPA 1992. *RCRA Groundwater Monitoring Draft Technical Guidance Document.* Document Number 530-R-93-001. November.

The original Hydrogeological Report was submitted in support of Petro-Chem's original RCRA Part B Permit Application with MDEQ, dated September 24, 1996. Additional information is provided in the 2007 Part 201 exposure pathways determination related to the 2006 fire and the 2016 Corrective Measures Study, prepared by Bureau Veritas North America, Inc and submitted to EGEL. Petro-Chem continually monitors groundwater and the most recent 2021 Petro-Chem Processing Group of Nortru, LLC Annual Groundwater Report was submitted to EGLE on February 28, 2022. Petro-Chem will provide an electronic copy of the 463-page 2021 annual groundwater monitoring report, other historic groundwater monitoring reports, the 201exposure pathway evaluation or the 2019 upon request.

B3.A HYDROGEOLOGIC REPORT WAIVER REQUEST
[R 299.9508(2)]

Historically, transfer areas into the tank systems and some container management activities occur outside. Therefore, the facility is not requesting a waiver from the hydrogeologic reporting requirements.

With the new proposed container management building and enclosure of the QAQC area, the container storage areas will be located inside a building that provides protection from precipitation and run-on/runoff and is designed and operated in accordance with R 299.9604. Tanks used to store hazardous waste are located outside in secondary containment areas. These tanks are designed and operated in accordance with R 299.9604. Precipitation which falls on the tanks is collected in the secondary treatment system and inspected/tested before being discharged under the facilities indirect NPDES discharge permit. If the water is impacted, it is managed as a hazardous waste. The facility does not operate any landfills, surface impoundments, waste piles or land treatment units.

☒ The facility does not operate a landfill, surface impoundment, waste pile, or land treatment unit, all hazardous waste management activities take place inside or under a structure that provides protection from precipitation and run-on/run-off, and the unit is in compliance with the facility design and operating standards found in R 299.9604.
