Michigan Department of Environment, Great Lakes and Energy (EGLE)

RE: Copperwood Project: Upcoming Site Activity Plans

Dear Ms. Humphrey,

This letter serves to keep you advised and notify you on our upcoming preliminary site preparation activities, anticipated to commence on or around July 15, 2023. These activities include logging the site and begin implementing wetland and stream activities authorized in the Part 301/Part 303 Wetland and Streams Permit WRP013721. By starting after July 15, we should avoid affecting the Northern Long-eared bat in accordance with the Wetland Permit. These activities will not involve accessing or excavation of any mineral deposits on the site. Accordingly, we understand that these activities do not implicate the notice provisions of General Permit Condition F.1 of the mining permit for the project.

Should you have any questions or require additional information, please contact Charline Miville-Deschenes at [charline.miville-deschenes@highlandcopper.com](mailto:charline.miville-deschenes@highlandcopper.com) or 581-988-8436.

We appreciate your support and look forward to successfully executing this project together.

Sincerely,

Denis Miville-Deschênes  
President and CEO,  
Highland Copper Company

Cc: Kayla Knoll, EGLE Water Resources Division
