

Blood Lead Level Test Results for Selected Flint Zip Codes, Genesee County, and the State of Michigan

Executive Summary for Quarter 3, Calendar Year 2022

Data as of February 06, 2023

This report is generated by MDHHS to track blood lead level test results in Flint, Michigan.

Background

- Blood lead level testing is an important part of efforts to identify people who have been harmed by lead in drinking water and other sources of lead exposure in the home. MDHHS recognizes that the full community of Flint must be the focus of the public health response.
- The CDC announced a change in the blood lead reference value (BLRV) from 5 µg/dL (micrograms lead per deciliter of blood) to 3.5 µg/dL in October 2021. MDHHS adopted the new reference value on May 1, 2022 (for more information see <https://www.michigan.gov/mdhhs/inside-mdhhs/newsroom/2022/04/29/mdhhs-updating-definition-of-elevated-blood-lead-levels>).
- The chart in this report shows the percent of children <6 with blood lead levels (BLL) above the BLRV of 3.5 µg/dL (Figure 1).
- This report includes counts of BLLs above the BLRV of 3.5 µg/dL (Tables 1, 2, 3, 4 and 5) and 5 µg/dL (Tables 1a, 6, 7, 8 and 9).

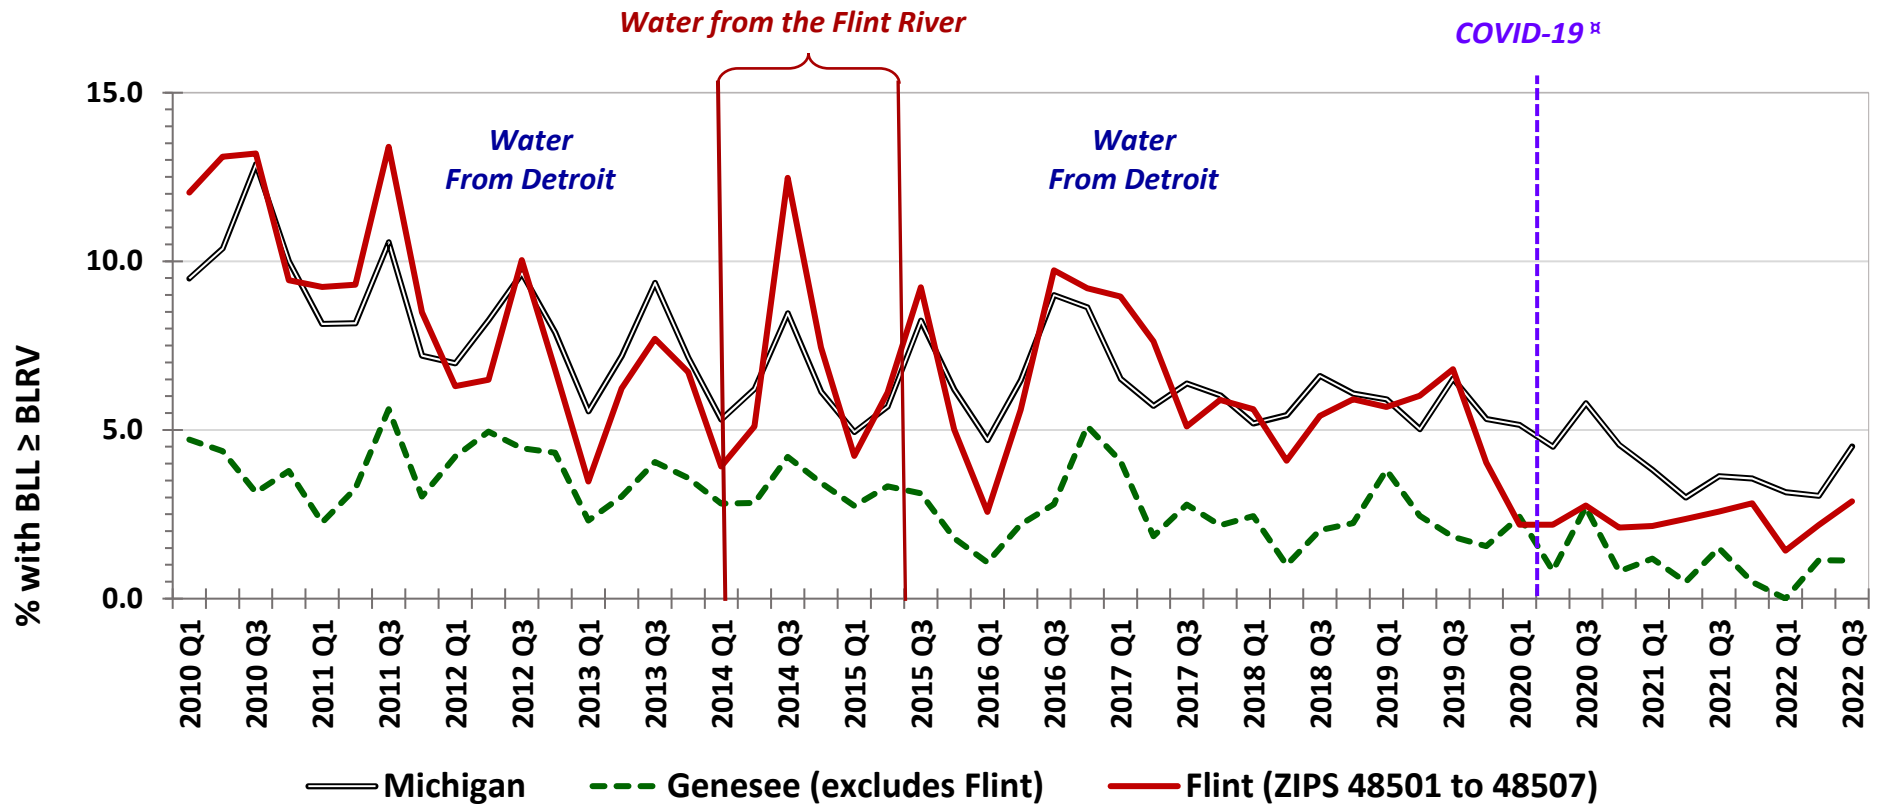

Data Presentation

- Each person is included only once per time period in this table.
 - If a person had multiple tests in the time period, the highest blood lead level from a venous test was counted.
 - If no venous test was performed, the highest blood lead level from a capillary test was counted.
 - If the type of test was unknown, the highest blood lead level obtained from an unknown sample type was counted.

Summary of Findings

- Between 10/1/2015 and 09/30/2022, 47,518 people had a blood lead test in the City of Flint in zip codes 48501-48507.
- Since 10/1/2015, 867 children under age 18 in Flint in zip codes 48501-48507 had BLLs greater than or equal to 3.5 µg/dL (409 had BLLs greater than or equal to 5 µg/dL).
- Of the 14,699 children under age 6 tested for lead in Flint since 10/1/2015, 5.1% had BLLs greater than or equal to the BLRV of 3.5 µg/dL (2.4% had BLLs greater than or equal to 5 µg/dL).

* Data source: MDHHS Data Warehouse, Data current as of February 06, 2023

^A Counts on this chart include both capillary and venous blood tests.

^B People who have had multiple tests are counted only once per year; if they are tested in more than one year, they will be counted once in each year they were tested.
