

Wage Report File Validation Tool

Quick Reference Guide

November 2025

Wage Report File Validation Tool

When MiUI launches, **all past due and future Quarterly Wage Reports will be submitted in MiUI**. Employers and third-party administrators (TPAs) can NOW test that their new wage report files meet the file format specifications for Delimited, EFW2, ICESA, or XML formats. When using the tool, **do not** use actual employer information or personally identifiable employee data.

Key Information for Testing

Before Submitting your Test Wage Report

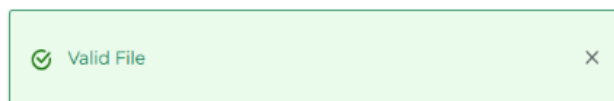

- Verify that the file is one of four acceptable file formats: Delimited, EFW2, ICESA, XML
- For testing purposes, files should contain no more than 100 records when uploaded to the tool. If the file is too large, the tool displays the following message “The uploaded file is larger than the online file upload limit.”

Note: When MiUI goes-live, files up to 50MB can be uploaded. MiUI can process files with up to 1,000 records.

How do I verify that my test file is valid?

- If the test file is valid after submission, the tool displays a confirmation message “Valid File.”

- If the file is valid after submission, but contains errors, the tool displays a table with the record number and associated error message.

Record Number ▲	Error Message ▲
27	Invalid Line Identifier
28	Invalid Line Identifier
29	Invalid Line Identifier
30	Invalid Line Identifier
3	Duplicate Social Security Number
12	Invalid Employee OutOfState Wages
12	Cannot submit out of state wages, incorrect reason code.
18	Missing Visa Wageindicator
22	Missing Visa Wageindicator

How do I know if my test file is invalid?

- If the test file format is invalid, the tool displays the following message, “Invalid file format/extension or file size limit exceeded.”
