Guidance for Combo Pack Registration

Historically, Michigan has required a separate registration for pesticides being packaged together and distributed as a multi/combo/bonus pack. For example, if a manufacturer packaged a container of lemon scented disinfecting wipes together with a can of lavender scented disinfectant wipes, we required each of the scents to be registered individually and required another registration for the combo product that included both scents. This was true for each scent, size and quantity of products packaged together.

Effective July 1, 2013, Michigan will no longer require a separate registration for combo products like the one described above. Instead, we will only require a separate registration if different *types* of products are being packaged together. For example, if a manufacturer packages a spray disinfectant together with a toilet bowl cleaner, both the disinfectant spray and the toilet bowl cleaner will need to be registered, as will the combo product. Different scent and size combinations of the two products however, will *NOT* require separate registrations. A list of product combinations that may or may not require a separate registration is attached for your reference.

Examples of Combo Products that Require a Separate Registration

- A product that contains pool chlorine tabs and an algaecide.
- A product that contains a disinfectant spray, a container of disinfectant wipes, and a bottle of hand sanitizer.
- A product that contains a toilet bowel cleaner and a container of disinfectant wipes.
- A product that contains an herbicide and a fungicide.
- A lice treatment kit that contains a shampoo, comb and bedding spray.

Examples of Combo Products that DO NOT Require a Separate Registration

- A product that contains 3 containers of disinfecting wipes.
- A product that contains 2 different scents of toilet bowl cleaner.
- Buy 1 Get 1 Free type products if all the included products are of the same type.
