

State of Michigan Employee Telemedicine Benefit Chart

Telemedicine visits allow you to meet with a US board-certified doctor online using a video-chat tool. It can help treat minor illnesses such as colds, sinus or respiratory infections, sprains, or rashes, making it perfect for times when your primary care physician is unavailable or leaving the house is difficult. Online doctors can even send prescriptions directly to your pharmacy.

Note: Telemedicine and online healthcare does not replace your relationship with your primary care physician.
