Introduction to These Standards

Development of the Proposed Standards

Since 2015, the Michigan Department of Education (MDE), in collaboration with Michigan's stakeholders, has been working to revise Michigan's teacher certification structure and improve the preparation of the educator workforce in Michigan. This is in direct alignment with Michigan's Top 10 Strategic Education Plan.

This collaboration has led to the design of a structure that places students at the heart of the system. A key goal of this structure is deeper preparation of teachers to meet the unique learning, developmental, and social-emotional needs of children at each grade level. This structure includes focused grade bands to provide new teachers with specialized knowledge about the students and content they will teach and defined clinical experiences and foundational coursework for each grade band.

The purpose of the Standards for the Preparation of Middle Grades (5-9) and High School (7-12) Science Teachers is to establish a shared vision for the core knowledge, skills, and dispositions that well-prepared beginning science teachers of middle level and high school students in Michigan should possess and demonstrate in their teaching. The standards reflect a vision of a well-prepared beginning teacher who is prepared to enact high-quality science instruction; address the needs of the whole child; use relevant, research-based criteria to establish a supportive, engaging environment that fosters learning; and use practices that meet the individual adolescent's needs. These standards are intended to support the preparation of classroom educators who will have a deeper understanding of science content for teaching, enact best instructional practices, and be ethically guided and prepared to address the state standards for student science learning.

Building on the work of the certification restructuring and the revision and adoption of teacher preparation standards for the Early Elementary (PK-3) and Upper Elementary (3-6) grade bands, as well as English Language Arts, Mathematics, and Professional Knowledge and Skills for the Middle Grades (5-9) and High School (7-12) grade bands, a stakeholder committee was convened to develop preparation standards in science for the 5-9 and 7-12 grade bands. This group, representing PK-12 science teachers, science curriculum and instruction experts, college and university teacher educators, and college and university science educators began meeting to revise Michigan's teacher preparation standards in science, which included standards for integrated science, biology, chemistry, earth and space science, physical science, and physics. Stakeholders included experts in adolescent learning and development and professional teacher preparation, and science instruction and content, including the above-named sub-disciplines of science.

The stakeholder committee began its work by reviewing Michigan's current [Standards for the Preparation of Teachers of Integrated Science–Secondary](#), adopted by the State Board of Education (SBE) in 2002, to determine whether they provided adequate guidance to prepare teachers to support students in the 5-9 and 7-12 grade bands in achieving the Michigan K-12 Science Standards. The committee considered whether to reaffirm existing Michigan teacher preparation standards, compose new standards, or adopt a national set of standards as

Michigan's standards. They unanimously recommended that new science preparation standards be composed for two reasons: 1) to integrate science and engineering practices and crosscutting concepts with science knowledge, and 2) to align with both the National Science Teachers Association's (NSTA) Teacher Preparation Standards and Michigan's K-12 Science Standards. The following were used as source material and guidance:

- [NSTA Teacher Preparation Standards](#) and NSTA Middle School Content Analysis ([All Disciplines](#)) and NSTA Secondary Content Analysis ([Chemistry](#), [Earth/Space Science](#), [Life Science](#), and [Physics](#))
- [MDE Core Teaching Practices](#)
- [MDE Clinical Experiences Requirements](#)
- [Upper Elementary \(Grades 3-6\) Teacher Preparation Standards for Science](#)
- [Michigan K-12 Science Standards](#)
- [A Vision for NSF Earth Sciences 2020-2030: Earth in Time](#)
- [MDE Equity and Family Engagement: Family Engagement Principles](#)
- [MDE Focus on Whole Child](#)
- [Michigan's Top 10 Strategic Education Plan](#)

At the start, the committee determined that because of the three-dimensional nature of the Michigan K-12 Science Standards, a similar framework would be required to guide the writing of the new preparation standards to ensure they align well with the K-12 standards. The stakeholders determined that this framework should both mirror the Michigan K-12 Science Standards' three-dimensional framework and allow for integration of and alignment with all the key MDE initiatives and essential aspects identified by these source documents for science teacher preparation.

The three components of the framework stakeholders developed to draft these proposed standards are termed facets. The first facet, core knowledge, defines the knowledge needed to teach science, including both science content and knowledge of learners and learning, planning and instruction, and safety in science instruction. The second facet, science teaching practices, contains the skills and craft of science teaching and describes what well-prepared beginning teachers of science need to be able to do with the core knowledge to teach students. Finally, the third facet, guiding principles for teaching science, are intellectual tools and critical dispositions that serve as a mindful lens for decision-making in a variety of situations to promote science learning for all students. These three facets were then braided together to draft these proposed standards in such a way that each standard has an element of each facet. Further explanation of the stakeholders' rationale in developing a framework with three facets can be found in the Science Teacher Preparation Standards Framework in Attachment E.

The stakeholder committee met twice monthly beginning in September 2019 through July 2021. The framework was developed by January 2021, and the standards for all science endorsements were drafted by June 2021. The committee solicited feedback from additional stakeholders with expertise in science content, instruction, and teacher preparation for middle grades and high school. In July 2021 the committee met several times to refine the draft standards in response to

stakeholder feedback and to ensure alignment between the standards and research on effective science instruction.

Public Comment

These standards were presented to the SBE on October 12, 2021, followed by a period of public comment through December 1, 2021. Public comment was solicited through an online survey, and professional organizations representing science educators and school administrators were invited to submit letters of support. A total of 60 individuals (school administrators, teachers, educator preparation faculty, parents, citizens, educational organization members) participated in the public comment survey, and letters of support were received from 18 professional organizations. All public comment feedback was reviewed by the original stakeholder committee, which made slight adjustments to the proposed standards as a result.

Three main themes were noted in the public comment on these standards:

1. **Support:** A clear majority of the respondents and letter-writers expressed overwhelming support for these draft standards. Reviewers expressed appreciation particularly for the focus on equity, identity, sense-making, and the needs of the whole child. The shift away from memorization and toward alignment with the K-12 Michigan Content Standards was also appreciated. It was also noted by many that these standards would be expected to result in very well-prepared science teachers, as so needed in our state.
2. **Revision suggestions:** Each suggestion was carefully reviewed and considered by the stakeholders. This resulted in a few areas of change to the original draft including some slight adjustments to the physics standards for the middle grades optional endorsement to align more closely with the K-12 Michigan Science Standards for that grade band. Some adjustments and consolidation of the chemistry standards to ensure the scope of the content is achievable in a typical teacher preparation program were also made.
3. **Comments not related to the standards:** There were five responses in the public comment survey that the stakeholder committee determined were not related to the content of the science standards but rather to their implementation. These will be saved to inform future work on appropriate placement guidance for teachers earning endorsements in science under these standards and support for preparation providers as they build programs aligned to these standards.

Resulting Shifts

These proposed standards represent several shifts from the current science teacher preparation standards:

1. *Multi-faceted* – The proposed standards shift to a clear focus on the multi-faceted understandings well-prepared beginning teachers need to teach science and include an essential balance between core knowledge aspects of pedagogy and content knowledge, direct alignment with K-12 science standards, and contextualized knowledge within principled practice.

2. *Equity* – The proposed standards have a deep focus on equity, shifting the vision of a well-prepared beginning teacher at the secondary level from an emphasis on possessing decontextualized content knowledge and toward an emphasis on classroom practices and contextualized understandings of science instruction that address the diverse social, emotional, developmental, and learning needs of the whole child.
3. *Performance-based* – The proposed standards are written in such a way as to enable the shift toward practice-based teacher preparation programs to ensure candidates have had multiple opportunities to practice the craft of teaching and strengthen it based on specific feedback about their enactment of science teaching practices.

Structure of the Endorsements

The stakeholders recommended that all teacher candidates pursuing certification with an endorsement to teach science earn a broad Science endorsement as their baseline credential. Candidates then have the option, either as part of initial preparation or as an additional endorsement, to stack an endorsement in a specialized science discipline onto the broad endorsement. As a result of this endorsement structure, these standards were intentionally developed in such a way that the broad Science endorsement contains all of the necessary knowledge and skills that well-prepared beginning middle grade or high school science teachers need to teach coursework addressing Michigan K-12 Science Standards for the respective grade band. This allows for the specialized disciplinary endorsements to tightly focus on additional content knowledge needed to teach that sub-discipline in areas that are beyond the Michigan K-12 Science Standards for that grade band. The proposed standards encompass the following areas:

Table 1: Science Endorsement Structure

	Middle Grades (5-9)	High School (7-12)
ALL Science Teachers will earn one of these.	Middle Grades Science Endorsement	High School Science Endorsement
<i>Optional Disciplinary Specializations may be added.</i>	<ul style="list-style-type: none"> • Biology • Earth and Space Science • Physical Science 	<ul style="list-style-type: none"> • Biology • Chemistry • Earth and Space Science • Physics

Only teacher candidates earning or possessing a middle grades Science (5-9) endorsement may add a middle grades biology, earth and space science, or physical science specialized disciplinary endorsement.

Only teacher candidates earning or possessing a high school Science (7-12) endorsement may add a high school biology, chemistry, earth and space science, or physics specialized disciplinary endorsement.

Placement Considerations

A middle grades science teacher will be well-prepared to teach science courses targeting grades 5 and middle school level Michigan Science Standards.

A middle grades science teacher with an optional disciplinary specialized endorsement will be well-prepared to teach science courses targeting grades 5 and middle school level Michigan science standards and science courses **in that discipline at the introductory high school level.**

A high school science teacher will be well-prepared to teach science courses targeting high school level Michigan Science Standards.

A high school science teacher with an optional disciplinary specialized endorsement will be well-prepared to teach science courses targeting high school level Michigan Science Standards and science courses **in that discipline at the advanced high school level,** just beyond the Michigan Science Standards and Michigan Merit Curriculum.

Table 2: The following chart is intended to clarify the placement considerations:

Endorsement or Combination	This teacher is well-prepared to teach:
Middle Grades (MG) Science only	Courses with grades 5-9 students that target grade 5 or Middle School Michigan Science Standards.
Middle Grades Science + <i>MG Biology</i>	Courses with grades 5-9 students that target grade 5 or Middle School Michigan Science Standards AND courses that target beginning level life science standards in the High School Michigan Science Standards.
Middle Grades Science + <i>MG Earth and Space Science</i>	Courses with grades 5-9 students that target grade 5 or Middle School Michigan Science Standards AND courses that target beginning level earth and space standards in the High School Michigan Science Standards.
Middle Grades Science + <i>MG Physical Science</i>	Courses with grades 5-9 students that target grade 5 or Middle School Michigan Science Standards AND courses that target beginning level physical science standards in the High School Michigan Science Standards.
High School (HS) Science only	Courses with grades 7-12 students that target High School Michigan Science Standards.
High School Science + <i>HS Biology</i>	Courses with grades 7-12 students that target High School Michigan Science Standards AND courses that target advanced-level life science standards beyond the High School Michigan Science Standards.
High School Science + <i>HS Chemistry</i>	Courses with grades 7-12 students that target High School Michigan Science Standards AND courses that target advanced level chemistry area physical science standards beyond the High School Michigan Science Standards.
High School Science + <i>HS Earth and Space Science</i>	Courses with grades 7-12 students that target High School Michigan Science Standards AND courses that target advanced level earth and space science standards beyond the High School Michigan Science Standards.
High School Science + <i>HS Physics</i>	Courses with grades 7-12 students that target High School Michigan Science Standards AND courses that target advanced level physics area physical science standards beyond the High School Michigan Science Standards.

Participants in Science Teacher Preparation Standards Development

Joseph Austin, Virtual Academy Teacher and K-12 Science Curriculum Consultant,
Waterford School District

Richard Bacolor, Science Consultant, Wayne Regional Educational Service Agency

Rachel Badinowski, Adjunct Professor, School of Education, Wayne State University

Rebecca Brewer, High School Biology Teacher, Troy School District; Textbook
Author, Biology Now; Teacher Ambassador, National Center for Science
Education

Dr. Diane S. Brown, Immaculate Heart of Mary, Associate Professor of Education,
Siena Heights University

Wanda Bryant, Middle School Science Teacher, Detroit Public Schools Community
District

Mary Burke, Science Instructional Consultant, Kalamazoo Regional Educational
Service Agency

Kristy Butler, High School Science Teacher, Forest Hills Public Schools; Michigan
Science Teachers Association Board Member

Sarah Cartwright, Science Teacher, Berkley Public Schools

Betty Crowder, Teacher Educator, Oakland University; Executive Director, Michigan
Science Teachers Association

Amy Deller, Science Curriculum Leader, Ann Arbor Public Schools

Melanie Dever, Science Teacher, Dexter Schools

James Emmerling, Science Consultant, Oakland Schools

Dr. Marcia Fetters, Associate Dean and Director of Teacher Education, Western
Michigan University

Jacob Foster, Founder, STEM (Science, Technology, Engineering, and Mathematics)
Learning Designs

Michael Gallagher, MiSTEM Regional Director, Oakland Schools and MiSTEM Network

Linnea Gibson, K-12 Science Consultant, Northern Michigan Learning Consortium,
Charlevoix-Emmet Intermediate School District

Mark Granger, Science Teacher, Jackson Public Schools

Mark Hackbarth, Science Teacher, Midland Public Schools; President, Midland City
Education Association

Dr. Brian Hancock, Assistant Professor of Education, Alma College

Tamara Heck, Science Education Research Consultant, Michigan Department of Education

Dr. Charles Henderson, Professor of Physics, Western Michigan University

Holly Hereau, Science Educator, BSCS (Biological Sciences Curriculum Study); Adjunct Faculty College of Education, Grand Valley State University; Adjunct Faculty Biology, Macomb Community College

Dr. Deborah Herrington, Professor of Chemistry and Integrated Science Program, Grand Valley State University

Kelly Hodges, Associate Director of Teacher Preparation and Accreditation, Michigan State University

Dr. James Holly, Jr., Assistant Professor, Mechanical Engineering, University of Michigan College of Engineering, University of Michigan

Dr. Jennifer Hicks, Director of K-12 STEM (Science, Technology, Engineering, and Mathematics) Engagement, Purdue University

Dr. Jacqueline E. Huntoon, Provost and Senior Vice President, Michigan Technological University

Brian Hugo, 9-12 Science Department Chair and Physics Instructor, Grand Blanc Community Schools

Dr. Thomas E. Keller, Former State Science Supervisor; Co-Leader of Framework for K-12 Science Education; Founder and Director STEM Education Strategies LLC

Dr. Sarah Keenan-Lechel, Regional Director, MiSTEM Network

Dr. Mitchell Klett, Professor, School of Education, Northern Michigan University

Angela Kolonich, Research, Create 4 STEM, Michigan State University

Dr. Sean Kottke, Educator Preparation Unit Manager, Michigan Department of Education

Dr. Beth Kubitskey, Associate Dean of Students and Curriculum, College of Education, Eastern Michigan University

Nancy Karre, Outreach Science Education Consultant, Battle Creek Math and Science Center

Tina M. Larson, Science Education Consultant

Dr. Debra Linton, Professor, Biology; Chair, Interdisciplinary Science Education Council, Central Michigan University

Dr. Stephen Mattox, Professor of Geology, Grand Valley State University

Rae McEntyre, Science Consultant, Kentucky Department of Education

Darcy McMahon, Higher Education Consultant, Michigan Department of Education

Julie Milewski, Curriculum Director, Central Montcalm Public Schools

Russ Miller, Science Teacher and Assistant Principal, Lakewood Public Schools

Lisa Ogiemwonyi, Science Education Consultant, Wayne Regional Educational Service Agency

Dr. Mark Olson, Associate Professor, School of Education, Oakland University;
Faculty Associate, School of Education, University of Wisconsin-Madison

Keith Piccard, Science Teacher, Allendale Public Schools; Biology Lecturer, Grand Valley State University

Michael Pillay, MiSTEM/Science Coordinator, Genesee Intermediate School District

Emily Pohlonski, Science Teacher/Content Area Leader, National Board Certified Teacher, Novi Community School District

Dr. Gail Richmond, Associate Dean for Students and Curriculum, Associate Professor of Physics and Astronomy, Michigan State University

Ed Roeber, Assessment Director, Michigan Assessment Consortium

Hillary Rose, Science Teacher, New Tech School High

Ricky Scott, Secondary Science Education Specialist, Utah State Board of Education

Katrina Schneider, Science Teacher, Michigan Great Lakes Virtual Academy

Dr. Hakim Shahid, Science Director, New Paradigm for Education

Nathan Spencer, Science Consultant, Wayne Regional Education Service Agency

Chris Standerford, Director, Central Upper Peninsula MiSTEM Region, MiSTEM Network; The Glenn T. Seaborg Mathematics and Science Center, Northern Michigan University

Dr. Mary Starr, Executive Director, Michigan Mathematics and Science Learning Network

Dr. Robert L. Stephenson, Science, Technology, Engineering, and Mathematics Consultant, Ingham Intermediate School District

Dr. David Stroupe, Associate Professor, Michigan State University

Amanda Sturm, Agriscience Teacher, Montcalm Area Intermediate School District

Susan Tate, Middle School Science Teacher, Whitehall Middle School; Michigan Science Teachers Association Board Member

Dr. Marshall Thomsen, Professor, Department of Physics and Astronomy, Eastern Michigan University

Michelle Tindall, Lecturer, Teacher Education, Oakland University

Michelle VandyBogurt, Science Teacher, Northwest Community Schools

Jennifer VanWagnen, Science Teacher, Columbia Schools

Wendi Vogel, Science Consultant, Kent Intermediate School District; Region B
Director, National Science Educational Leadership Association

Cheryl Wilson, Computer Science Consultant, Michigan Department of Education

J. Louise Wilson, Science Teacher, Grand Rapids Public Schools

Richard Wright, Science Teacher, Andrews Academy

Dr. Sandra Yarema, Science Teacher Educator, Wayne State University; Michigan
Science Teachers Association Board Member

MIDDLE GRADES (MG) SCIENCE TEACHER PREPARATION STANDARDS

MG.S1. LEARNERS AND LEARNING ENVIRONMENTS

Well-prepared beginning teachers of science:

- S1.1 Learn about, consider, and incorporate students' backgrounds to plan and adapt instruction that leverages the iterative nature of sense-making and promotes positive student identities.
- S1.2 Monitor and maintain relationships with students while engaging them in productive struggle and discourse to challenge science ideas and construct science meaning together, keeping in mind the importance of supporting each student's development through scaffolded sense-making.
- S1.3 Encourage students to share their thinking about phenomena or problems with intentional use of talk moves in science to foster an inclusive, equitable, and anti-bias environment that respects students' cultures.
- S1.4 Ensure that group tasks and structures allow all students to build understanding, identities, and perceptions as science learners, in a variety of environments (e.g., the laboratory, field, and community) while respecting culturally different ways of knowing and reinforcing their rightful presence in science.
- S1.5 Engage students in learning activities using science and engineering practices and crosscutting concepts to socially construct explanations of a phenomenon or solutions to a problem.

MG.S2. CONTENT PEDAGOGY

Well-prepared beginning teachers of science:

- S2.1 Elicit and interpret student ideas about anchoring scientific phenomena and problems in three-dimensional teaching and learning situations to make instructional decisions that engage students in collaborative, evidence-based sense-making, while valuing all students' ways of knowing and doing science.
- S2.2 Design three-dimensional learning experiences to connect to and build upon the lives of learners by leveraging learners' prior experiences and knowledge, using varying research-based pedagogies such as talk and group work in ways that are culturally sustaining and enhance scientific ways of thinking.
- S2.3 Uncover and consider students' verbal and visible thinking to plan and implement appropriate differentiation and research-based pedagogical strategies to support and prioritize student needs, perspectives, questions, and problems so that all students develop conceptual scientific knowledge.

- S2.4 Support students to construct arguments to develop and defend explanations of scientific phenomena or solutions to engineering problems through the applications of appropriate scientific practices and crosscutting concepts so that students may be empowered to contribute to scientific problem-solving in their community and the world.
- S2.5 Create opportunities for students to value diverse ways of thinking that build on their histories and experiences, while mobilizing social capital to engage all students in solving problems and using engineering practices.
- S2.6 Build mutual trust with students through caring support and alignment of instruction and assessment strategies that address students' prior knowledge and partial understandings while navigating tensions between alternative and canonical ideas or ways of knowing.
- S2.7 Select and integrate science-specific technological tools which engage learners in three-dimensional learning to explore, describe, and explain phenomena and support students' conceptual understanding.
- S2.8 Uncover and consider students' thinking to select appropriate instructional strategies that illustrate the interdisciplinary nature of science and engineering and that allow students to demonstrate sense-making and understanding in different, valid, and informative ways.
- S2.9 Support students to persevere in making sense of new observations, information, or data and to develop arguments supported by credible evidence and valid reasoning using connections to other core disciplines (mathematics, social studies, and English language arts).

MG.S3. IMPACT ON LEARNING

Well-prepared beginning teachers of science:

- S3.1 Give specific and timely verbal feedback to support student sense-making via formative assessment used to recognize and assess learners' ideas, life experiences and understanding, while engaging students in high-level challenges that build toward citizenship, stewardship, and lifelong community engagement.
- S3.2 Prepare constructive written feedback for students from assessments that are designed to show learning and application of three-dimensional understanding to move them toward productive sense-making situated within their lived experiences, building on existing ideas, assets, resources, and ways of knowing.
- S3.3 Reflect on, interpret, and purposefully disaggregate summative assessment data to inform future planning and teaching, with particular attention to student demographics and learning progress, being thoughtful about how assessment information is used, and the potential impact on students' identities as scientists.

MG.S4. SAFETY

Well-prepared beginning teachers of science:

- S4.1 Select and modify instructional materials and activities to apprentice students and build their agency in safety techniques for the purpose of exploring phenomena or solving problems using knowledge about procurement, preparation, use, storage, dispensing, supervision, and disposal of chemicals/materials/equipment.
- S4.2 Establish shared ownership within the entire classroom community of roles, routines, and safety protocols to minimize hazardous situations, implement emergency procedures, maintain safety equipment, and follow policies and procedures that comply with established state and national guidelines and standards, and best professional practices while monitoring, coaching, and providing feedback to collaboratively create a physically safe environment.
- S4.3 Plan intentionally for discourse around ethical and legal decision-making adhering strictly to science safety protocols with respect to the safe and humane treatment of all living organisms including their collection, care and use in and out of the classroom, and creating an environment that is safe for students who have varying perspectives on the treatment of living organisms.

MG.S5. PROFESSIONAL KNOWLEDGE AND SKILLS

Well-prepared beginning teachers of science:

- S5.1 Use and reflect on assessment evidence of the three-dimensional aspects of student science understanding while honoring students' multiple ways of knowing, doing, and communicating their thinking to continually improve instructional effectiveness and professional growth that ensures a rightful presence in science for all students.
- S5.2 Examine and manage professional growth while engaging in professional learning to remain current and open to learning from students and colleagues to deepen and grow in teaching knowledge, skills and dispositions, including the ability to employ science-specific technology and be culturally responsive.

MG.S6. SPECIALIZED CONTENT KNOWLEDGE FOR ALL SCIENCE TEACHERS

Well-prepared beginning teachers of science:

- S6.1 Use tools and strategies to ensure all students have equitable opportunities to understand the nature of science and the cultural norms and values inherent in the current and historical development of scientific knowledge, empowering students toward action that contributes to scientific problem-solving in their community and the world.
- S6.2 As part of planning, unpack big ideas within a learning sequence to identify crosscutting concepts, disciplinary core ideas, science and engineering practices,

and ensure the incorporation of science-specific technologies and contributions of diverse populations to science.

S6.3 Reflect and interpret student thinking and understanding while considering science standards, learning progressions, and sequencing of science content to scaffold and support student sense-making.

S6.4 Select and modify instructional materials that engage students in using grade-appropriate elements of the disciplinary core ideas, science and engineering practices and crosscutting concepts to explore, describe, and explain phenomena or design solutions within a classroom environment where all students participate in the co-construction of knowledge.

S6.5 Engage students in sense-making cycles of activity to develop an understanding of the major scientific concepts, principles, theories, laws, and interrelationships to explain phenomena and solve problems together as a classroom community of learners.

A Note about the Expansion of Standard S6.5:

The following Specialized Content Knowledge Questions are representative of the specialized understanding of content that well-prepared beginning teachers must have to teach the Michigan K-12 Science Standards. They are directly aligned with the disciplinary core ideas identified in that document. It is expected that candidates will engage in three-dimensional learning experiences around these content areas to develop an integrated, deep, and flexible understanding of the content needed to teach students at this grade band.

S6.5 Expansion Life Science for High School

(Some courses/requirements may be substituted if taking the Biology Specialized Endorsement. See Specialized Biology Standards for Middle Grades)

LS1: From Molecules to Organisms: Structures and Processes

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following life science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:LS.1a: Structure and Function

1. What role do cells play in living organisms? What evidence can you provide that living things are made of cells?
2. How do cells function similarly and differently in unicellular and multicellular organisms?
3. How do major organelles impact cell function?
4. What evidence supports the argument that the body is a system of interacting sub-systems composed of cells, tissues, organs, and systems?
5. How have humans determined that living things are made of cells and who has contributed to this work?
6. What evidence supports the argument that multicellular organisms have different types of cells for different functions?

MG.S6.5:LS.1b: Growth and Development of Organisms

1. How do plants and animals ensure the continuation of their species?
2. What behaviors or structures do organisms use to ensure the continuation of their species?
3. What empirical evidence supports an explanation for how characteristic animal behaviors and specialized plant structures affect the probability of successful reproduction of animals and plants, respectively?
4. What patterns demonstrate how organisms grow and develop?
5. -How is the growth of organisms impacted by genetic and environmental factors?

MG.S6.5:LS.1c: Organization for Matter and Energy Flow in Organisms

1. How do organisms obtain and use the matter and energy they need to live and grow?
2. How do we model the flow of energy through organisms within an ecosystem?

3. How do organisms obtain and transform energy through chemical processes such as photosynthesis, cellular respiration, and digestion?
4. How can models be used to show the different ways aerobic and anaerobic bacteria achieve their energy requirements?

MG.S6.5:LS.1d: Information Processing

1. How do different signals transfer information from a sense receptor to the brain?
2. How are signals interpreted by the brain to influence behavior and memory?
3. What models can be developed to demonstrate how organisms detect, process, and use information about the environment?

LS2: Ecosystems: Interactions, Energy, and Dynamics

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following life science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:LS.2a: Interdependent Relationships in Ecosystems

1. What growth patterns of organisms and/or populations can be impacted by changes in access to resources?
2. How do the different types of community relationships shape the populations within an ecosystem?
3. How can we demonstrate that changes in the abiotic factors impact the biotic components of an ecosystem?
4. How do competition, predation, and beneficial mutualism influence how organisms obtain needed matter and energy?

MG.S6.5:LS.2b: Cycles of Matter and Energy Transfer in Ecosystems

1. What models demonstrate how matter and energy move through an ecosystem?
2. How does a food web demonstrate how matter and energy moves within an ecosystem?
3. What are the roles of producers, consumers, and decomposers in matter and energy cycling in an ecosystem?

MG.S6.5:LS.2c: Ecosystem Dynamics, Functioning, and Resilience

1. How do environmental changes affect ecosystems?
2. How can models be used to predict the impact of a disruption to a physical or biological component of an ecosystem on a population?
3. What arguments could be constructed to link biodiversity to the health of an ecosystem?

MG.S6.5:LS.2d: Social Interactions and Group Behavior

1. How do organisms interact in groups so as to benefit individuals?
2. How can we construct a model using data to show how different factors impact the behaviors of individuals and entire populations?

LS3: Heredity: Inheritance and Variation of Traits

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following life science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:LS.3a: Inheritance of Traits

1. How do the patterns within data show how characteristics of one generation are passed to the next?
2. What are the structural and functional relationships among genes, chromosomes, proteins, and traits?
3. How can we explain the ways that mutations occur?
4. What evidence can be used to support the claim that gene mutations result in changes in an organism?

MG.S6.5:LS.3b: Variation of Traits

1. Why do individuals of the same species vary in how they look, function, and behave?

LS4: Biological Evolution: Unity and Diversity

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following life science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:LS.4a: Evidence of Common Ancestry and Diversity

1. What forms of evidence can we use to infer evolutionary relationships?
2. How do patterns in the fossil record document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth?

MG.S6.5:LS.4b: Natural Selection

1. What evidence/arguments support that natural selection can lead to biodiversity?
2. How can genetic variation impact an individual's or species' reproductive advantage?
3. What are the tradeoffs (risks and benefits) of using artificial selection to improve characteristics of organisms?
4. How have humans influenced the inheritance of desired traits in organisms throughout history?

MG.S6.5:LS.4c: Adaptation

1. How can evidence demonstrate that the environment influences populations of organisms over multiple generations?
2. What model(s) demonstrate that environmental changes impact the distribution of traits in a population?
3. How can reproductive isolation lead to speciation?
4. What evidence would support the conclusion that natural selection has occurred in a population?
5. How can mathematical modeling be used to describe how natural selection may lead to increases and decreases of specific traits in populations over time?

MG.S6.5:LS.4d: Biodiversity and Humans

1. How can an ecosystem model be used to demonstrate the role of biodiversity?
2. How do changes in biodiversity affect humans?
3. How have humans impacted biodiversity?
4. How does human impact on biodiversity affect environmental, economic, and social considerations of the community?

S6.5 Expansion Earth and Space Science for Middle Grades

(Some courses/requirements may be substituted if taking the Earth and Space Science Specialized Endorsement. See Specialized Earth and Space Science Standards for Middle Grades)

ESS1: Earth's Place in the Universe

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following earth and space science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:ES.1a: The Universe and Its Stars

1. How can the position and motion of the Sun, planets, and stars be observed, described, predicted, and explained with models?
2. What evidence is used to support the current model for the formation and expansion of the universe?

MG.S6.5:ES.1b: Earth and the Solar System

1. What types of objects can be found in the Solar System?
2. How does gravity affect the motion of objects around the sun and/or around planets?
3. How do models explain the motion of the Sun and moon to cause tides and eclipses?
4. What causes seasonal change on Earth?

MG.S6.5:ES.1c: History of Planet Earth

1. What evidence is collected and how is it interpreted to reconstruct Earth's history?
2. What are the limitations of analyzing rock strata and the fossil record in reconstructing Earth's history?

ESS2: Earth's Systems

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following earth and space science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:ES.2a: Earth Materials and Systems

1. How do Earth's major systems interact to impact Earth processes?
2. What spatial and temporal scales must be employed to observe changes and interactions in Earth's systems?

MG.S6.5:ES.2b: Plate Tectonics and Large-Scale System Interactions

1. How does Plate Tectonic theory provide explanatory and predictive power for describing the evolution of Earth's surface?
2. How does Plate Tectonics explain the distribution of rocks and minerals at Earth's surface?
3. What map-pattern evidence can be employed to make retrodictions of the previous positions of Earth's plates?

MG.S6.5:ES.2c: The Roles of Water in Earth's Surface Processes

1. How do the chemical and physical properties of water and its movement create changes in the ocean, atmosphere, and surface and subsurface of the Earth?

MG.S6.5:ES.2d: Weather and Climate

1. How can data and models be used to extrapolate weather and climate patterns?
2. What is the difference between weather and climate?
3. What systems regulate weather and climate and how do those systems interact?
4. How does the Greenhouse Effect regulate Earth temperatures?

MG.S6.5:ES.2e: Biogeology

1. How have organisms on Earth evolved in response to changes in the Earth's systems? (Geosphere, Hydrosphere, Atmosphere and Biosphere)
2. How can organisms impact Earth's major systems?

ESS3: Earth and Human Activity

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following earth and space science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:ES.3a: Natural Resources

1. How does the increase in population growth influence the demand for resources?
2. How are the Earth's resources unevenly distributed across the planet and what caused that distribution?
3. How has technology been employed to develop and promote the use of renewable energy resources?

MG.S6.5:ES.3b: Natural Hazards

1. What tools and models can be employed to make reliable predictions about the timing and intensity of natural hazards?
2. How can we use information about past natural hazards to assist in forecasting future hazards?

MG.S6.5:ES.3c: Human Impacts on Earth Systems

1. How have organisms responded to changes in their environment as a result of human activity?
2. What changes in human behavior and technology can mitigate the negative impacts humans have had on Earth systems?

MG.S6.ES.3d: Global Climate Change

1. How have human activities have positively impacted Earth's climate?
2. How have human activities have negatively impacted Earth's climate?
3. How can knowledge from science, engineering, technology, and mathematics (STEM) areas and social science disciplines be used to mitigate the impact of humans on the Earth's climate?

S6.5 Expansion Physical Science for Middle Grades

(Some courses/requirements may be substituted if taking the Physical Science Specialized Endorsement. See Specialized Physical Science Standards for Middle Grades)

PS1. Matter and Its Interactions

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following physical science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:PS.1a: Structure and Properties of Matter

1. How does the analysis of data from investigations help determine the nature of matter?
2. What is the relationship between energy, states of matter, and phase changes of matter?
3. What are chemical and physical properties and how are they used to identify substances?
4. What are the relationships among the number of moles, volume, temperature, and pressure of gases?
5. What atomic models have been used and how were they developed and applied over time?
6. How do patterns in the Periodic Table predict reactivity and properties of matter?
7. What trends exist in the Periodic Table and how do those trends reflect atomic structure?
8. How can the characteristics of different types of bonding be predicted using the Periodic Table?
9. In what ways do atoms combine to form novel substances?
10. What conventions do chemists use for naming chemical compounds and writing chemical formulas?

MG.S6.5:PS.1b: Chemical Reactions

1. How does kinetic molecular theory explain chemical processes?
2. What are possible models of energy as it is involved in the processes of chemical reactions?
3. How does a given balanced chemical equation provide evidence of conservation of mass?
4. What patterns in chemical reactions can be used to predict the products and yield of a chemical reaction given the reactants?
5. How can models be used to predict the resulting reaction given the strength of an acid and base?

MG.S6.5:PS.1c: Nuclear Processes

1. How and why does the structure of the atom change during nuclear decay?
2. What evidence shows that the amount of radioactive materials change over the course of a nuclear decay reaction?
3. How is half-life used to determine the age of rocks and other natural materials?

PS2: Motion and Stability: Forces and Interactions

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following physical science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:PS.2a: Forces and Motion

1. How can models be used to explain relationships among mass, velocity, acceleration, force, and momentum for macroscopic objects?
2. How does Newton's Laws of Motion apply to macroscopic objects in a system?
3. How are the conservation of momentum and energy related?

MG.S6.5:PS.2b: Types of Interactions

1. How can conceptual and mathematical models be used to understand the nature of the gravitational relationship between two masses?
2. How can conceptual and mathematical models be used to understand the electrostatic relationship between two electrical charges?
3. Using the mathematical representations of Newton's Law of Gravitation and Coulomb's Law of Electrostatic Forces, how can we compare the scale of the two forces?
4. How can the cause-and-effect relationship between electric currents and magnetic fields be described?
5. How do we apply the relationship between electric current and magnetic fields in real world situations?

MG.S6.5:PS.2c: Stability and Instability in Physical Systems

1. According to our investigations, why are some physical systems more stable than others?
2. How can we model the mechanisms that maintain stability in closed systems?

PS3: Energy

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following physical science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:PS.3a: Definitions of Energy

1. How can we explain energy?
2. What are different types and forms of energy and how can they be interrelated?
3. What are the conceptual and mathematical relationships among energy, work, and power?
4. How are efficiency and conservation of energy related?
5. Using the particulate model of matter, how do we model energy and energy changes?
6. What is the relationship between thermal energy and temperature?

MG.S6.5:PS.3b: Conservation of Energy and Energy Transfer

1. How is energy converted from one form to another and what is the evidence that supports this claim?
2. How can we describe the practical applications of energy conversion for real-world examples?
3. When two systems interact with each other, what factors determine the ways in which energy can be transferred from one to the other?
4. What evidence can be used to demonstrate the conservation of energy?
5. How do the amount and properties of matter affect the energy needed to change the temperature of the sample?
6. How do various energy diagrams model mechanical, light, and electric interactions?

MG.S6.5:PS.3c: Relationship between Energy and Forces

1. What evidence supports the argument that are forces related to energy?
2. How can conceptual and mathematical models be used to describe the relationships among conservation of mass, momentum, energy, and charge?

MG.S6.5:PS.3d: Energy in Chemical Processes and Everyday Life

1. How do plants utilize chemical processes to produce sugar?
2. What models can be used to show how energy released from complex molecules containing carbon?
3. In what ways can a mechanical system be made more energy efficient?
4. How does friction affect the energy efficiency of a mechanical system?

PS4: Waves and Their Applications in Technologies for Information Transfer

The well-prepared beginning teachers of science will engage in sense-making cycles of activity around the following physical science questions to explain phenomena and solve problems together as a classroom community of learners.

MG.S6.5:PS.4a: Wave Properties

1. What are the different types and functions of waves?
2. What are the characteristic properties and behaviors of waves?
3. What are the mathematical and conceptual relationships among, frequency, wavelength, and speed of waves traveling in different media?

MG.S6.5:PS.4b: Electromagnetic Radiation

1. How do scientists describe the properties of light?
2. How does light behave given the two models of electromagnetic behavior (e.g., particle versus wave)?
3. What happens to light when it interacts with different materials?

MG.S6.5:PS.4c: Information Technologies and Instrumentation

1. How do different technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy?
2. How are instruments that transmit and detect waves used to explore the world around us beyond what we can see and hear?

S6.5 Expansion Engineering for Middle Grades

ETS1: Engineering Design

The well-prepared beginning teachers of science will engage in problem solving through the design process and facilitate students to engage in the design process through engaging in the following:

MG.S6.5:ETS.1a: Defining and Delimiting Engineering Problems

1. What is the role of core science ideas, knowledge and concepts in identifying and defining engineering problems?
2. How does clear delineation of problems through criteria and constraints support solving complex problems with multiple potential solutions?
3. How do the criteria (i.e., what the people want included within the proposed solution) and constraints (i.e., what resources are available and unavailable - time, finances, materials, etc.) define and delimit a problem?

MG.S6.5:ETS.1b: Developing Possible Solutions

1. How can previous attempts and actions to address the problem (by local people affected and others, historically and within a design cycle) inform possible solutions?
2. What creative measures, including combining parts of different solutions, can be taken to address the problem while adhering to the constraints and satisfying the specified criteria?
3. How can the range of constraints, including cost, safety, reliability, and aesthetics, as well as social, cultural, and environmental impacts be used to consider and evaluate potential solutions?
4. How can models be used to test solutions?
5. What variables are selected to determine the effectiveness of the design?
6. How can it be determined (which variables are considered) how well the design performs when tested and how do results drive modifications?

MG.S6.5:ETS.1c: Optimizing the Design Solution

1. How can criteria be unpacked into simpler components?
2. How does the iterative nature of testing lead to improvement in the design? What is the role of failure in design testing? What was learned from the testing process that can lead to improvement in the design?
3. How are criteria prioritized over others?
4. How can criteria be approached systematically during the design, engineering, and evaluation processes?

ETS2: Links Among Engineering, Technology, Science, and Society

The well-prepared beginning teachers of science will engage in problem solving through the design process and facilitate students to engage in the design process through engaging in the following:

MG.S6.5:ETS.2a: Interdependence of Science, Engineering, and Technology

1. How do advances in science influence engineering? How do advances in engineering influence science?
2. What are the interconnections and distinctions between science and engineering?
3. How can we understand the Science and Engineering Practices from both the perspective of how engineers use them and how scientists use them?
4. What do students need to understand as they explore career paths about the barriers to a diverse science and engineering workforce and the economic impact of those barriers?

MG.S6.5:ETS.2b: Influence of Engineering, Technology, and Science on Society and the Natural World

1. How are cost analysis, environmental impact and risks and benefits critical to the engineering design process?
2. How can solutions/products/designs/technologies be improved for the health of people and the natural environment?
3. How can solutions/products/designs/technologies be improved to enhance sustainability within society?
4. How can solutions/products/designs/technologies be done more cost effectively while maintaining the same effectiveness?
5. How can the effectiveness of solutions/products/designs/ technologies be improved to mitigate or adapt to unforeseen consequences?

**Standards for the Preparation of Middle
Grades (5-9) Science Teachers in Optional
Disciplinary Specialization Biology**

OPTIONAL DISCIPLINARY SPECIALIZATION IN BIOLOGY FOR

GRADES 5-9 SCIENCE TEACHERS

MG.B.LS1.A: STRUCTURE AND FUNCTION: *How do the structures of organisms enable life's functions?*

1. What role do specialized cells play in living organisms?
2. How does the difference in structure between unicellular and multicellular organisms contribute to their function?
3. How does the development of cell theory demonstrate the nature of science?
4. What are the elements of a system that determine an individual's traits and how could we model that system?
5. What evidence supports the argument that changes in protein structure alter the functioning of the cell?
6. How can the relationships among the hierarchical system of cells, tissues, organs, and systems be modeled?
7. How do we use scientific technologies to generate evidence about structures at the microscopic scale?
8. How does the polarity of the water molecule enable the function of living systems?
9. What evidence supports our understanding of the molecular composition of cells and their components?

MG.B.LS1.B: GROWTH AND DEVELOPMENT OF ORGANISMS: *How do organisms grow and develop?*

1. How can we model the relationships between mitosis, gene expression, and differentiation to explain the growth and development of multicellular organisms?
2. What argument can be constructed for why meiosis is essential for sexual reproduction?
3. How can the similarities and differences between mitosis and meiosis be modeled?

MG.B.LS1.C: ORGANIZATION FOR MATTER AND ENERGY FLOW IN ORGANISMS: *How do organisms obtain and use the matter and energy they need to live and grow?*

1. How can the growth of organisms be explained by drawing upon mechanisms for building complex organic molecules from simple elements?
2. How can we model the interactions between the light and dark reactions to demonstrate the transformations of matter and energy that occur during photosynthesis?
3. How do enzymes affect energy use in the breakdown and synthesis of molecules?

MG.B.LS1.D: INFORMATION PROCESSING: *How do organisms detect, process, and use information about the environment?*

1. How might functions associated with each of the main regions of the brain impact behavior?
2. What patterns distinguish reflexes from complex behaviors?
3. How is homeostasis maintained through feedback mechanisms?

MG.B.LS2.A: INTERDEPENDENT RELATIONSHIPS IN ECOSYSTEMS: *How do organisms interact with the living and nonliving environments to obtain matter and energy?*

1. How do interspecific interactions influence how organisms obtain matter and energy for survival and reproduction?
2. What evidence would support the claim that complex interactions within an ecosystem help to maintain relatively stable numbers and types of organisms in that ecosystem?

MG.B.LS2.B: CYCLES OF MATTER AND ENERGY TRANSFER IN ECOSYSTEMS: *How do matter and energy move through an ecosystem?*

1. What models demonstrate how matter and energy move through and within an ecosystem?
2. What models best illustrate the roles of photosynthesis and respiration in the movement of carbon through food chains and the cycling of carbon within ecosystems?
3. How can mathematical modeling be used to depict how the efficiency of energy flow through ecosystems impacts the number of organisms at increasingly higher trophic levels?
4. What data could be used to provide evidence that an imbalance in the global carbon cycle is leading to climate change?

MG.B.LS2.C: ECOSYSTEM DYNAMICS, FUNCTIONING, AND RESILIENCE: *What happens to ecosystems when the environment changes?*

1. How can we use models to predict the impact of a disruption to a physical or biological component of an ecosystem on the populations and communities within the ecosystem?
2. What data can we use to evaluate the anthropogenic changes that have occurred in the environment and their impacts on ecosystems?

MG.B.LS2.D: SOCIAL INTERACTIONS AND GROUP BEHAVIOR: *How do organisms interact in groups to benefit individuals?*

1. What evidence can be used to evaluate the role of group behavior on individuals' and species' chances to survive and reproduce?

MG.B.LS3.A: INHERITANCE OF TRAITS: *How are the characteristics of one generation related to the previous generation?*

1. What evidence can be used to support the claim that gene mutations result in changes in an organism?
2. What evidence was used to develop the structural model of DNA and how does this demonstrate the nature of science and historical ways that women and minorities have been challenged in their role in science?
3. How do DNA sequences lend themselves to regulatory functions?

MG.B.LS3.B: VARIATION OF TRAITS: *Why do individuals of the same species vary in how they look, function, and behave?*

1. What are the relationships among alleles and DNA, nucleotide sequences, protein synthesis, genes, and chromosomes?
2. How can you develop a model that demonstrates both the conservative nature of DNA replication and how it contributes to variation?
3. What are the mechanisms (including potential for mutation caused by environmental factors) involved in sexual and asexual reproduction that lead to the patterns of similarity and difference in how they each generate genetic variability?
4. How do both genetic and environmental factors affect the expression/regulation of DNA to generate particular traits?
5. Why is genetic variability important?
6. How does the calculation of the probability of traits in future generations based on parental genotypes support making predictions about a population over time?

MG.B.LS4.A: EVIDENCE OF COMMON ANCESTRY AND DIVERSITY: *What evidence shows that different species are related?*

1. What forms of evidence are used to infer evolutionary relationships?
2. How do patterns in the fossil record document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth?
3. How can the patterns inherent in a set of comparative DNA sequences be used to model evolutionary relationships?

MG.B.LS4.B: NATURAL SELECTION: *How does genetic variation among organisms affect survival and reproduction?*

1. How and through what technologies have humans influenced the inheritance of desired traits in organisms throughout history?
2. How can there be so many similarities among organisms yet so many different kinds of plants, animals, and microorganisms?
3. How are shifts in the numerical distribution of traits used as evidence to support that advantageous heritable traits tend to increase in a population?
4. How are natural selection, adaptations, and evolution interrelated?
5. Explain how various scientists contributed to the development of the theories of evolution by natural selection?

MG.B.LS4.C: ADAPTATION: *How does the environment influence populations of organisms over multiple generations?*

1. What is the potential impact of a new pathogen on a population?
2. How has the increase in prescribing antibiotics impacted the evolution of bacteria (including virulence and resistance)?

MG.B.LS4.D: BIODIVERSITY AND HUMANS: *What is biodiversity, how do humans affect it, and how does it affect humans?*

1. In what ways can changes in environmental conditions affect the distribution of species and/or habitats?
2. How can modeling predict and test the impacts of proposed solutions for the protection of a threatened or endangered species?

**Standards for the Preparation of Middle
Grades (5-9) Science Teachers in Optional
Disciplinary Specialization in Earth and Space
Science**

Optional Disciplinary Specialization in Earth and Space Science Standards for Grades 5-9 Science Teachers

ESS1: EARTH'S PLACE IN THE UNIVERSE: What is the universe, and what is Earth's place in it?

MG.E.ESS1.A: THE UNIVERSE AND ITS STARS: *What is the Universe and what goes on in stars?*

1. What nuclear reactions take place that result in the Sun radiating energy?
2. How will the nuclear reactions in the Sun change over time?
3. What do the spectral patterns of distant stars reveal about their age and history?
4. How do the spectra of stars and galaxies provide evidence of their chemical composition?
5. What is the relationship between velocity and relative distance from Earth for these spectra?
6. How does a star's mass influence its evolution?

MG.E.ESS1.B: EARTH AND THE SOLAR SYSTEM: *What are the predictable patterns caused by Earth's motion in the Solar System?*

1. How can the mathematical representations of Kepler's Laws provide predictions of natural and man-made objects in the solar system?
2. What is the nature and period of oscillations in Earth's motions?
3. What positive and negative feedback can be seen in these oscillations?

MG.E.ESS1.C: HISTORY OF PLANET EARTH: *How do people reconstruct and date events in Earth's planetary history?*

1. In what ways can the decay of radioactive isotopes be used to establish an absolute age for Earth materials?
2. How do tectonic processes affect current patterns of continental and ocean floor features?
3. How do scientists use the mineralogic and chemical compositions of Earth and solar system materials to understand the conditions of Earth's earliest history?
4. How does the record of impacts and collisions provide information on the history of the Solar System?
5. How can a model be used as evidence to illustrate how Earth's internal and surface processes operate at different spatial and temporal scales to form continental and ocean-floor features?

ESS2: EARTH'S SYSTEMS: How and why is Earth constantly changing?

MG.E.ESS2.A: EARTH MATERIALS AND SYSTEMS: *How do Earth's major systems interact?*

1. In what ways can Earth's dynamic systems be modeled, over both short and long time spans?
2. How does Earth's internal energy drive small- and large-scale crustal processes?
3. How is the rate of change in Earth System processes interrelated?
4. How can seismic wave data indicate differences in density in the crust and mantle of the Earth?

5. What causes motion in the Earth's mantle?
6. How can the sequence of rocks in a given area provide evidence of the plate tectonic environment of their formation?
7. What experimental evidence can be used to identify different types of soil?
8. How can a quantitative model be used to describe the cycling of carbon among the hydrosphere, atmosphere, geosphere, and biosphere?

MG.E.ESS2.B: PLATE TECTONICS AND LARGE-SCALE SYSTEM INTERACTIONS:

Why do the continents move, and what causes earthquakes and volcanoes?

1. What are the sources of energy that drive Earth's surface and subsurface processes?

MG.E.ESS2.C: THE ROLES OF WATER IN EARTH'S SURFACE PROCESSES: *How do the properties and movements of water shape Earth's surface and affect its systems?*

1. How does the storage and movement of water, including but not limited to the properties of watersheds, mediate and facilitate short- and long-term processes on the surface and in the subsurface of the Earth?

MG.E.ESS2.D: WEATHER AND CLIMATE: *What regulates weather and climate?*

1. What energy transformations occur to incoming solar radiation as it is transferred between Earth systems?
2. What is the evidence in the rock and sediment record for changes in climate?
3. What are the drivers for climate change?
4. Based on current rates of change in energy levels, what are some valid extrapolations for changes in climate and the impact on the biosphere, hydrosphere, and lithosphere?
5. What causes El Nino and La Nina events and what effect do these events have on weather, climate, and the environment?
6. How can models be used to describe how variations in the flow of energy into and out of Earth's systems result in changes in climate?

MG.E.ESS2.E: BIOGEOLOGY: *How do living organisms alter Earth's processes and structures?*

1. How can organisms impact Earth's major systems?
2. How would the Earth's lithosphere, atmosphere, and hydrosphere be different in the absence of life?

ESS3: EARTH AND HUMAN ACTIVITY: *How do Earth's surface processes and human activities affect each other?*

MG.E.ESS3.A: NATURAL RESOURCES: *How do humans depend on Earth's resources?*

1. How are the Earth's resources unevenly distributed across the planet and what caused that distribution?
2. How has technology been employed to develop and promote the use of renewable energy resources?

MG.E.ESS3.B: NATURAL HAZARDS: *How do natural hazards affect individuals and societies?*

1. How have occurrences of natural hazards in local, regional, and global environments driven human movements and populations in those environments?

MG.E.ESS3.C: HUMAN IMPACTS ON EARTH SYSTEMS: *How do humans change the planet?*

1. What changes in human behavior and technology can mitigate the negative impacts humans have had on Earth systems, including mining, urbanization, and atmospheric, aquatic, and terrestrial pollution?
2. How do different resource management approaches impact the long-term availability/sustainability of natural resources?

MG.E.ESS3.D: GLOBAL CLIMATE CHANGE: *How do people model and predict the effects of human activities on Earth's climate?*

1. What technological resources are available to advance Earth's positive feedback systems and mitigate negative feedback systems due to the use of resources by humans?

**Standards for the Preparation of Middle
Grades (5-9) Science Teachers in Optional
Disciplinary Specialization Physical Science**

Optional Disciplinary Specialization in Physical Science Standards for Grades 5-9 Science Teachers

Chemistry

MG.P.PS1.A: MATTER AND ITS INTERACTIONS: *How can one explain the structure, properties, and interactions of matter?*

1. How does the analysis of data from investigations help determine the nature of matter?
2. How can the creation of models from data represent matter and the properties of its various states of matter?
3. What are chemical and physical properties and how are they used to identify substances?
4. How can the Kinetic Molecular Theory of gases explain the behavior of gases?
5. What experimental data provide evidence for and limitations of past and current models of the atom?
6. How was the Periodic Table developed and what does it show about the nature of science?
7. What patterns found in the Periodic Table predict properties and bonding?
8. In what ways do atoms combine to form novel substances?
9. How is the stability of a molecule related to its energy?
10. How can a molecule's structure be used to determine the shape and polarity of a molecule?
11. What patterns in structure and bonding are used for naming chemical compounds and writing formulas?

MG.P.PS1.B: CHEMICAL REACTIONS: *How do substances combine or change (react) to make new substances? How does one characterize and explain these reactions and make predictions about them?*

1. How is energy involved in a chemical reaction?
2. What role does the Law of Conservation of Mass play in explaining the data related to chemical quantities in a reaction?
3. How are observations of chemical reactions used to develop the activity series and predict the nature of chemical reactions?
4. How can the structure of electrochemical cells be described by chemical half-reactions?
5. What patterns can be used to predict the resulting reaction given the strength of an acid and base?
6. How can an investigation be designed to show the change of pH during titration?
7. In what ways are chemical processes used in the mining of metals, minerals, ores, and elements?
8. How are chemical processes used in biological phenomena?
9. How can collision theory be used to explain observations in rates of chemical reactions and shifts in chemical equilibria?

MG.P.PS1.C: NUCLEAR PROCESSES: *What forces hold nuclei together and mediate nuclear processes?*

1. How do the amounts of subatomic particles change during nuclear decay?

2. How does the amount of radioactive materials change over the course of a nuclear decay reaction?
3. How can half-life be used to mathematically determine the age of rocks and other natural materials?

MG.P.PS3.A:¹ DEFINITIONS OF ENERGY: *What is energy?*

1. How can the change of energy during a phase change of a material be represented in a model?
2. How can the change in enthalpy be calculated during a chemical reaction?
3. How can the spontaneity of a reaction be explained based on the relationship between enthalpy, entropy, and free energy?
4. How can an investigation show how electrical energy is produced in a voltaic cell?
5. How can electrolysis be explained?
6. What evidence is there for the wave-particle duality of electrons?

MG.P.PS3.B: CONSERVATION OF ENERGY AND ENERGY TRANSFER: *What is meant by conservation of energy?*

How is energy transferred between objects or systems?

1. How can the relationship between the energy of a system and the energy of its surroundings be used to determine the heat of a reaction?

MG.P.PS4.B: ELECTROMAGNETIC RADIATION: *What is light? How can one explain the varied effects that involve light? What other forms of electromagnetic radiation are there?*

1. How do quantum mechanical models and molecular orbital theory improve our ability to explain chemical behavior?

MG.P.PSO: ORGANIC CHEMISTRY: *What is Organic Chemistry? Why is carbon used in organic molecules?*

1. How do models explain how the atoms from glucose molecules combine with other elements to form more complex organic molecules?
2. What is the effect of the use of enzymes during the synthesis or breaking down of molecules?
3. What are the different ways in which carbon atoms combine to make different classes of organic compounds?
4. How do different functional groups predict the properties and reactivity of organic compounds?
5. How does the structure of reactants in an organic reaction predict the products?

MG.P.PSH: HUMAN IMPACT ON THE ENVIRONMENT: *What impact have humans caused the environment? What evidence and data can be used to show the impact? What can humans do to have a positive impact on the environment?*

1. What is the greenhouse effect and how do greenhouse gases contribute to climate change?
2. How can chemistry design solutions to mitigate global climate change?
3. How can chemistry be used to investigate ways to mitigate other air quality concerns and design solutions?

¹ PS2 concepts are included in the physics category of physical science.

Physics

MG.P.PS1.C: NUCLEAR PROCESSES: *What forces hold nuclei together and mediate nuclear processes?*

1. How is half-life used to determine the age of rocks and other natural materials?

MG.P.PS2.A: FORCES AND MOTION: *How can one predict an object's continued motion, changes in motion, or stability?*

1. How can an object's continued motion, changes in motion, or stability be predicted?
2. How can models be used to explain relationships among mass, velocity, acceleration, force, and momentum for macroscopic objects?
3. How can models help explain the nature of different forces?
4. What are the conceptual and mathematical relationships among velocity and mass for a collection of interacting objects, as in a collision?
5. How can a conceptual model be used to describe the size of collision forces?

MG.P.PS2.B: TYPES OF INTERACTIONS: *What underlying forces explain the variety of interactions observed?*

1. What is the relationship between electric fields and electric forces?
2. What is the relationship between magnetic fields and magnetic forces?
3. What are the conceptual and mathematical relationships between two objects interacting through electrical or gravitational fields?

MG.P.PS2.C: STABILITY AND INSTABILITY IN PHYSICAL SYSTEMS: *Why are some physical systems more stable than others?*

1. How do you design an investigation to explore why some systems are more stable than others?
2. What role does the Second Law of Thermodynamics play in understanding the cause and effect of heat flow processes?

MG.P.PS3.A: DEFINITIONS OF ENERGY: *What is energy?*

1. What is energy and how is it measured?
2. What demonstrations can be done to demonstrate the presence of different forms of energy?
3. How can mathematics be used to describe energy transfer between objects?
4. How can systems be designed to harness energy to solve practical problems?

MG.P.PS3.B: CONSERVATION OF ENERGY AND ENERGY TRANSFER: *What is meant by conservation of energy? How is energy transferred between objects or systems?*

1. How does the system change when energy (electrical, thermal, and mechanical) flows in and out of it?
2. How can energy conservation be used to generate mathematical expressions to predict the behavior of a system?
3. How can electrical circuits be used to demonstrate energy transfer and transformation?
4. What are the conceptual and mathematical relationships among conservation of mass, momentum, energy, and charge as applied to systems of objects?

MG.P.PS3.C: RELATIONSHIP BETWEEN ENERGY AND FORCES: *How are forces related to energy?*

1. How can we use a plot of the potential energy as a function of position to relate the potential energy to its underlying force?

MG.P.PS3.D: ENERGY IN CHEMICAL PROCESSES AND EVERYDAY LIFE: *How do food and fuel provide energy? If energy is conserved, why do people say it is produced or used?*

1. If the Earth receives a nearly continuous supply of energy from the sun, why are our fuel supplies for chemical and biological processes limited?
2. What are some real-world examples of applications of energy conversion?

MG.P.PS4.A: WAVE PROPERTIES: *What are the characteristic properties and behaviors of waves?*

1. What happens to light or sound when it interacts with different materials?
2. How can information be digitized and communicated using the electromagnetic spectrum?
3. What is resonance and how is the concept applied to everyday events?

MG.P.PS4.B: ELECTROMAGNETIC RADIATION: *What is light? How can one explain the varied effects that involve light? What other forms of electromagnetic radiation are there?*

1. What forms of electromagnetic radiation exist?
2. What are the different models for electromagnetic radiation?
3. What are some practical applications of electromagnetic radiation?
4. How does electromagnetic radiation affect matter?

Appendices to the Middle Grades and High School Science Teacher Preparation Standards

Appendix A: Framework for the Science Teacher Preparation Standards

Rationale for Faceted Standards

When we define the knowledge needed to teach science (one facet), we are left with the question of how deeply does one need to understand those core teaching ideas to engage students productively? We can imagine a teacher candidate who has mastered the ability to answer multiple-choice questions about science concepts and educational theory that may not be at all prepared to teach students and use that knowledge for productive teaching and learning.

We can answer the question of how deeply we need to understand core knowledge for teaching by asking what the precise things are that a typical teacher needs to do with that knowledge, and the answer becomes, “a teacher needs to understand the core ideas well enough, deeply enough to engage in the key practices of teaching.” This second facet helps us to set a depth of knowledge and a performance expectation by which we can assess if a teacher has the requisite depth of understanding. The question moves away from whether teachers have memorized core knowledge about science and the teaching of science and toward whether they can use that knowledge to effectively enact teaching practices.

Why then layer on the third facet of “guiding principles?” A teacher must be able to enact teaching practices in a way that not only demonstrates depth of core knowledge but the flexibility to use that knowledge in varied circumstances according to a set of shared principles. These principles allow candidates to develop a mindful lens for decision-making in a variety of situations that span the educational context to promote science learning for all students. Problem-solving in the context of core knowledge and core practices requires the demonstration of familiarity, understanding, and capacity to reflect important guiding principles.

Facet Definitions Table

Science Teaching Practices Facet	Core Knowledge for Teaching Science Facet	Guiding Principles for Teaching Science Facet
<i>Definitions</i>		
<p><i>The Science Teaching Practices</i> are the activities of teaching which are essential for:</p> <ul style="list-style-type: none"> • Engaging students in learning science • Supporting students' social-emotional development • Ensuring responsible, safe science teaching practice 	<p><i>Core Knowledge for Teaching Science</i> reflects specialized knowledge for teaching:</p> <ul style="list-style-type: none"> • Fundamental concepts, principles, and processes in each of the subdisciplines of science, and of engineering to address scientific problems or issues • How students, depending upon age and experience, develop understanding of key scientific concepts, both in terms of breadth and depth • Approaches to representing these concepts, principles, and processes in ways more likely to support student learning in a safe environment 	<p><i>The Guiding Principles for Teaching Science</i> are intellectual tools and critical dispositions that:</p> <ul style="list-style-type: none"> • Serve as a productive lens through which teachers can organize their thinking when making decisions about all aspects of science teaching and learning • Provide teachers with an ethical framework and useful schema to make professional judgments and participate as a member of the profession

The Facets		
Science Teaching Practices	Core Knowledge for Teaching Science	Guiding Principles for Teaching Science
<ol style="list-style-type: none"> 1. Building respectful relationships 2. Eliciting and interpreting students' thinking about science phenomena or solving problems 3. Engaging students in sense-making cycles of activity to explain phenomena or solve problems 4. Leading science discourse in order to make sense of phenomena or solve problems 5. Setting up and managing small group work to develop understanding of problems or phenomena 6. Checking student understanding and scientific sense-making during and at the conclusion of lessons 7. Providing oral and written feedback to students about phenomena or scientific problems 8. Learning about students' cultural, religious, family, intellectual, personal experiences, and resources for mindful/intentional inclusion in science instruction 	<ol style="list-style-type: none"> A. Learners and Learning Environments - teachers understand how to create and sustain learning environments which are safe and inclusive, and which engage students in powerful learning experiences to support their developing ability to make sense of scientific phenomena B. Content Pedagogy - teachers understand how to represent and assess scientific knowledge and practices in ways which are responsive to students' backgrounds, needs, and interests and support their ability to effectively solve problems within and across disciplines C. Safety- teachers understand how to produce, maintain, and evaluate the safety procedures of the grade band and disciplines D. Impact on Student Learning - teachers understand how to design and make use of formative and summative assessments to make informed decisions about student achievement and about instruction in the immediate and longer term E. Professional Knowledge and Skills - teachers understand the role of critical reflection and ongoing professional learning on instructional effectiveness F. Specialized Content Knowledge - teachers understand all dimensions of the key standards and progressions critical to their grade band and disciplines 	<ol style="list-style-type: none"> I. Science for All - teachers are guided by the value that all students have a rightful presence in science II. Whole Child Framework- teachers are guided by the tenets of the whole child framework III. Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students IV. Disciplinary Literacy - teachers are guided by a stance that honest communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication V. Community Knowledge Building - teachers will be guided by the orientation that scientific knowledge is socially constructed

Facet Elements

Science Teaching Practices Facet Elements

1. Building respectful relationships.

- a. Establish rapport with students.
- b. Build mutual trust.
- c. Implement strategies for creating a classroom culture that values productive struggle, challenging science ideas, constructing science meaning together, and enjoying science.
- d. Monitor and maintain relationships with students.
- e. Develop classroom discussion norms with students or develop student input on established community norms that include talk that is focused on reasoning, talk that is respectful, and talk that is equitable.
- f. Examine and manage self in relationship with students.

2. Eliciting and interpreting students' thinking to develop a scientific understanding of phenomena or solve problems.

- a. Anticipate student thinking and potential alternative conceptions of science content based on research.
- b. Formulate and pose carefully chosen questions or tasks to allow students to share their thinking about academic content in order to understand student thinking.
- c. During instruction engage students with additional questions, prompts, and tasks to probe their thinking about evidence and unpack what they say.
- d. Uncover and consider students' verbal and visible thinking to reveal novel points of view, new or alternative ideas, partial understandings, and students' everyday language and experiences to benefit future instruction.
- e. Interpret student ideas to guide instructional decisions and reveal ideas that may benefit other students.
- f. Engage students to make their thinking public.

3. Engaging students in sense-making cycles of activity to explain phenomena or solve problems.

- a. Unpack the big ideas, identify the anchoring event, tie the essential question to the anchoring event, recognize the sense-making that occurs within the unit to develop the storyline.
- b. Engage students in questioning about a phenomenon or problem.
- c. Select and modify instructional materials to create learning environments that engage learners in using the disciplinary core ideas, science and engineering practices, and crosscutting concepts to explore, describe, and explain phenomena.
- d. Engage students in using science and engineering practices and crosscutting concepts to make sense of a phenomenon or solve a problem.
- e. Support students to interpret evidence, construct explanations, and support explanations with arguments about phenomena or problems.
- f. Support students to connect experiences back to the phenomena or problems in the unit.

- g. Prepare to allow students to use their everyday language to engage in discourse with new content/phenomenon and encourage the use of technical vocabulary over the course of an instructional unit/cycle.

4. Leading science discourse in order to make sense of phenomena or solve problems.

- a. Plan intentionally for discourse with multiple access points.
- b. Determine the goal of the classroom discourse you expect students to engage in.
- c. Anticipate students' responses to a question or task (e.g., phenomenon, reading, data) in order to prepare to facilitate conversations.
- d. Ensure a safe and collaborative environment by revisiting and reflecting on the norms as necessary.
- e. Activate and elicit students' ideas about a scientific phenomena.
- f. Support students to persevere in making sense of new observations, information, or data.
- g. Press students for evidence-based explanations about a phenomenon or problem.
- h. Use tools and strategies to ensure all students have equitable opportunities to participate and share their thinking (norms, talk moves, high cognitive demand tasks).
- i. Encourage students to use their everyday language to engage in discourse with new content/phenomena.

5. Setting up and managing small group work to develop an understanding of problems or phenomena.

- a. Ensure that group tasks and structures allow students to see one another as capable contributors to their learning with the understanding that group work, students' relationships, identities, and perceptions of one another affect their learning opportunities.
- b. Develop groups intentionally for appropriate size and student representation, and based on patterns of student interaction.
- c. Ensure that small group work is intentionally based around high cognitive demand sense-making tasks.
- d. Establish roles and routines, as well as monitor, coach, and provide feedback on implementation.
- e. Provide the strategies and tools, written and verbal instructions, as well as scaffolds for students to engage in discourse within a task.
- f. Use student and group roles to foster discourse about the phenomenon and problems posed by the group task.
- g. Monitor small group work to ensure that the individual student's understanding and group understanding are both critical to the work and valued.
- h. Make adjustments based on observations of individual students, groups, and their sense-making.

- 6. Checking student understanding** and scientific sense-making during and at the conclusion of lessons.
- Elicit student thinking through tools such as summary tables, KLEWS charts, driving question boards, or others that enable students to think critically about the lesson phenomena and work to understand how the students' current thinking helps explain the anchoring phenomenon or solve a problem.
 - Use or modify both formative and summative assessments that elicit evidence of the three-dimensional aspects of student science understanding.
 - Reflect and interpret student thinking and understanding.
 - Inform and adjust instruction based on student thinking and understanding.
- 7. Providing oral and written feedback** to students about phenomena or scientific problems.
- Prepare constructive written feedback to students that continues to strengthen relationships and move students toward productive sense-making.
 - Give specific feedback in a timely fashion to support student thinking and affirm student knowledge and skills.
 - Use appropriate guiding questions and productive talk to guide students to reflect on understanding in all three science dimensions and encourage them to go deeper.
 - Provide equitable and valuable feedback to empower learning and promote ownership and agency.
 - Provide opportunities for students to self-assess, use feedback, and give feedback to each other.
 - Support and monitor students' responses to the feedback.
- 8. Learning about students'** cultural, religious, family, intellectual, personal experiences, and resources for use in science instruction.
- Make intentional connections through the use of talk moves to encourage students to share with the class or small group how they can relate to the phenomena or situation personally.
 - Ensure tasks (assessments and activities) are equitable for the diversity of students in your care.
 - Learn your students' background and use this information as you plan for and adapt instruction.
 - Create opportunities for students to engage in diverse sense-making building on their community histories, values, and practices.
 - Design learning experiences to grow out of the lives of learners.
 - Support students to use their sense-making repertoires and experiences as critical tools in engaging with science practices.
 - Notice sense-making repertoires and consider students' diverse sense-making as connecting to science practices.

CORE KNOWLEDGE FACET ELEMENTS

CK A: Learners and Learning Environments

Well-prepared beginning science teachers will understand:

1. How learners make sense of scientific phenomena, ideas, experiences, and data, what scientific sense-making looks like in individuals, and the iterative nature of sense-making.
2. Appropriate and engaging teaching and learning strategies for creating a classroom culture that values productive struggle, challenging science ideas, engaging in productive science discourse, constructing science meaning together, and enjoying science.
3. Appropriate and engaging learning activities that foster an inclusive, equitable, and anti-bias environment and create an inclusive linguistic culture.
4. Appropriate and engaging learning activities in a variety of environments (e.g., the laboratory, field, and community).
5. Appropriate and engaging learning activities to include in lesson sequences and/or assessments to create learning environments that provide opportunities for sense-making and explanation building through investigation, collaboration, communication, evaluation, revision, modeling, and argumentation related to scientific phenomena.

CK B: Content Pedagogy

Well-prepared beginning science teachers will understand:

1. The role of scientific phenomena and problems in three-dimensional teaching and learning and their role in connecting science disciplines.
2. Appropriate research-based student-centered, culturally relevant, disciplinary-based 3D instructional approaches; leveraging learners' prior experiences and knowledge, varying activity structures, talk and group work for science. For example, they should be expected to elicit learners' thinking, cultural and community connections, and curiosity when making sense of phenomena.
3. Appropriate differentiation strategies and research-based pedagogical strategies to support students with a variety of cognitive, emotional, physical, and other needs and strengths so that all students develop conceptual knowledge.
4. Engagement of students in applying science practices and crosscutting concepts, such as clarifying relationships, and identifying natural patterns from empirical experiences in lessons, curricula, and assessments.
5. Engineering practices wherein students design, construct, test, and optimize possible solutions to a problem in support of science learning and how it is similar or different from science.
6. Alignment of instruction and assessment strategies that address students' prior knowledge and alternative conceptions to support instructional decision-making and navigate tensions between alternative ideas and ways of knowing (which may be derived from various cultures) and canonical science ideas. Example strategies include referring to evidence, continuing to consider/debate to work through the ideas, focusing on the most important disciplinary/explanatory ideas, and understanding when it is appropriate and necessary to create space for learners to grapple with alternative ideas.

7. Integration of science-specific technologies to support all students' conceptual understanding of science and engineering.
8. Appropriate instructional strategies which illustrate the interdisciplinary nature of fundamental principles, processes, and problems in science and engineering.
9. Connections to other core disciplines (mathematics, social studies, and English language arts) within the science standards.

CK C: Impact on Student Learning

Well-prepared beginning science teachers will understand how to:

1. Use assessments that show students have learned and can apply disciplinary knowledge, nature of science, science and engineering practices, and crosscutting concepts in practical, authentic, and real-world situations.
2. Use summative purposeful disaggregated assessment data or information to inform future planning and teaching, with particular attention to student demographics and learning progress.
3. Use formative assessments to recognize and assess learners' ideas, life experiences, and learning beyond the technical scientific language by evaluating samples of learners' work and classroom interactions to determine the nature and depth of learner sense-making and leverage ongoing changes in student's learning to adjust instruction.

CK D: Safety

Well-prepared beginning science teachers will understand:

1. Activities appropriate for the abilities of students that demonstrate safe techniques for the procurement, preparation, use, storage, dispensing, supervision, and disposal of all chemicals/materials/equipment used within their grade band and disciplines.
2. How to recognize hazardous situations including overcrowding; implement emergency procedures; maintain safety equipment; provide adequate student instruction and supervision; and follow policies and procedures that comply with established state and national guidelines, appropriate legal state and national safety standards (e.g., OSHA, NFPA, EPA), and best professional practices (e.g., NSTA, NSELA).
3. Ethical decision-making with respect to the safe and humane treatment of all living organisms in and out of the classroom, and compliance with the legal restrictions and best professional practices on the collection, care, and use of living organisms as relevant to their grade band and disciplines.

CK E: Professional Knowledge and Skills

Well-prepared beginning science teachers will understand:

1. Critical reflection on science teaching to continually improve instructional effectiveness.
2. How to access specific opportunities for professional development to deepen their science-specific content knowledge and pedagogical knowledge as well as practices.

CK F: Specialized Content Knowledge

Well-prepared beginning science teachers will understand:

1. The nature of science and the cultural norms and values inherent to the current and historical development of scientific knowledge.
2. Crosscutting concepts, disciplinary core ideas, practices of science and engineering, the supporting role of science-specific technologies, and contributions of diverse populations to science.
3. Science standards, learning progressions, and sequencing of science content for teaching the appropriate grade band and discipline area.
4. Grade appropriate elements of the practices, disciplinary core ideas, and cross-cutting concepts within instructional materials.
5. The major concepts, principles, theories, laws, and interrelationships of their grade band and disciplines and supporting fields (e.g., mathematics).

GUIDING PRINCIPLES FACET ELEMENTS

I. Science for All - Teachers are guided by the value that all students have a rightful presence in science.

- A. Science is a culturally mediated way of thinking and knowing and may contribute to and/or disrupt social inequities over time.
- B. A social justice orientation propels teachers to recognize and address inequities manifested in classroom practices.
- C. Multicultural representations and respect for culturally different ways of knowing to reinforce students' rightful presence in science and expand students' funds of knowledge of the multicultural contributions to the field.
- D. Pedagogies that are culturally sustaining can be used to leverage and enhance scientific ways of thinking and to respect students' cultures.
- E. Social capital can be mobilized to ensure opportunities for higher-order and complex thinking for all students in science across school systems.

II. Whole Child Framework- Teachers are guided by the tenets of the whole child framework.

- A. Each student learns in an environment that is physically safe, adhering strictly to science safety protocols, while also emotionally safe for intellectual risk-taking and building a culture that supports public reasoning (Safety).
- B. Each student's development in using science and engineering practices and crosscutting concepts is supported by a caring adult through leveraging community resources and scaffolded sense-making (Supported).
- C. Each student is actively engaged in science and engineering practices and using crosscutting concepts as they solve problems in their school and broader communities (Engaged).
- D. Each student has access to high-level challenges that build citizenship, stewardship, and lifelong engagement to ensure access to future school and career opportunities in STEM fields (Challenged).

III. Scientific Agency - Teachers are guided by recognition of the importance of building scientific agency within themselves and students.

- A. Building and promoting positive science identities is prioritized.
- B. Students understand the nature of science and improve their ability to navigate and explain their world by actively engaging in science.
- C. Learning is best situated within students' lived experiences, building on existing student ideas, assets, resources, and ways of knowing.
- D. Assessments could be tied to negative outcomes on students' identity as scientists. Teachers must be thoughtful with regard to modalities, feedback, and how assessment information is used.
- E. Students demonstrate understanding in different, valid, and informative ways and it is necessary to provide different options for how students show their sense-making.
- F. Empowering students toward action that contributes to scientific problem solving in their community and the world.

IV. Disciplinary Literacy - Teachers are guided by a stance that communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication.

- A. Evidence-based skepticism is necessary for citizens to be critical consumers of science who are able to consider the complexity and dynamic nature of science.
- B. Agency within a discipline is highly connected to the literacies and communication practices of that discipline.
- C. Honoring multiple ways of knowing, doing, and communicating scientific thinking ensures a rightful presence in science for all students.
- D. Scientific argument must transparently communicate ideas supported by credible evidence and valid reasoning.
- E. Technology is an important means for obtaining, communicating, and evaluating information.

V. Community Knowledge Building - Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.

- A. Science understanding is socially constructed in an inquiry-based classroom environment where all students engage in the building of knowledge or possible solutions.
- B. A scientific community ensures a collaborative evidence-based approach to addressing beliefs and biases while valuing other ways of knowing and doing science.
- C. Science learning is most meaningful when situated within the community to ensure authenticity and cultural relevance as problems are solved in real-world contexts in collaboration with various stakeholders.
- D. Science teachers must engage in self-reflection in order to build awareness of the impact of one's own culture and biases in the classroom and on the co-construction of knowledge.
- E. Science teachers must be open to learning from students and colleagues in order to grow in their teaching, scientific understanding, and ability to be culturally responsive.
- F. Science teaching must be student-centered; prioritizing student needs, perspectives, questions, and problems within classroom instruction as authentic scientific work.

G. Classroom culture must promote and support risk-taking inherent in public reasoning needed for science learning.

Appendix B: Standards with Foundations Boxes

HS.S1. Learners and Learning Environments

Well-prepared beginning science teachers:

S1.1 Learn about, consider, and incorporate students' backgrounds to plan and adapt instruction that leverages the iterative nature of sense-making and promotes positive student identities.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>8c: Learning about students' cultural, religious, family, intellectual, personal experiences, and resources for use in science instruction.</p> <p>c. Learn students' background and use this information as you plan for and adapt instruction.</p>	<p>CK A: Learners and Learning Environments</p> <p>CKA1: how learners make sense of scientific phenomena, ideas, experiences and data, what scientific sense-making looks like in individuals, and the iterative nature of sense-making.</p>	<p>IIIA: Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students.</p> <p>A. Building and promoting positive science identities is prioritized.</p>

S1.2 Monitor and maintain relationships with students while engaging them in productive struggle and discourse to challenge science ideas and construct science meaning together, keeping in mind the importance of supporting each student's development through scaffolded sense-making.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>1d: Building respectful relationships</p> <p>d. Monitor and maintain relationships with students.</p>	<p>CK A: Learners and Learning Environments</p> <p>CKA2: appropriate and engaging teaching and learning strategies for creating a classroom culture that values productive struggle, challenging science ideas, engaging in productive science discourse, constructing science meaning together, and enjoying science.</p>	<p>IIB: Whole Child Framework- teachers are guided by the tenets of the whole child framework.</p> <p>B. Each student's development in using science and engineering practices and crosscutting concepts is supported by a caring adult through leveraging community resources and scaffolded sensemaking (Supported).</p>

S1.3 Encourage students to share their thinking about phenomena or problems with intentional use of talk moves in science to foster an inclusive, equitable, and anti-bias environment that respects students’ cultures.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>8a: Learning about students’ cultural, religious, family, intellectual, personal experiences, and resources for use in science instruction.</p> <p>a. Make intentional connections through use of talk moves to encourage students to share with the class or small group how they can relate to the phenomenon or situation personally.</p>	<p>CK A: Learners and Learning Environments</p> <p>CKA3: appropriate and engaging learning activities that foster an inclusive, equitable, and anti-bias environment and create an inclusive linguistic culture.</p>	<p>ID: Science for All - teachers are guided by the value that all students have a rightful presence in science.</p> <p>D. Pedagogies that are culturally sustaining can be used to leverage and enhance scientific ways of thinking and to respect students’ cultures.</p>

S1.4 Ensure that group tasks and structures allow all students to build understanding, identities, and perceptions as science learners, in a variety of environments (e.g., the laboratory, field, and community) while respecting culturally different ways of knowing and reinforcing their rightful presence in science.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>5a: Setting up and managing small group work to develop understanding of problems or phenomena.</p> <p>a. Ensure that group tasks and structures allow students to see one another as capable contributors to their learning with understanding that group work, students’ relationships, identities, and perceptions of one another affect their learning opportunities.</p>	<p>CK A: Learners and Learning Environments</p> <p>CKA4: appropriate and engaging learning activities in a variety of environments (e.g., the laboratory, field, and community).</p>	<p>IC: Science for All - teachers are guided by the value that all students have a rightful presence in science.</p> <p>C. Multicultural representations and respect for culturally different ways of knowing reinforce students’ rightful presence in science, and expand students’ funds of knowledge of the multicultural contributions to the field.</p>

S1.5 Engage students in learning activities using science and engineering practices and crosscutting concepts to socially construct explanations of a phenomenon or solutions to a problem.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3d: Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <p>d. Engage students in using science and engineering practices and crosscutting concepts to make sense of a phenomenon or solve a problem.</p>	<p>CK A: Learners and Learning Environments</p> <p>CKA5: appropriate and engaging learning activities to include in lesson sequences and/or assessments to create learning environments that provide opportunities for sense-making and explanation building through investigation, collaboration, communication, evaluation, revision, modeling and argumentation related to scientific phenomena.</p>	<p>VA: Community Knowledge Building - Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.</p> <p>A. Science understanding is socially constructed in an inquiry-based classroom environment where all students engage in the building of knowledge or possible solutions.</p>

HS.S2. Content Pedagogy

Well-prepared beginning science teachers:

S2.1 Elicit and interpret student ideas about anchoring scientific phenomena and problems in three-dimensional teaching and learning situations to make instructional decisions that engage students in collaborative, evidence-based sense-making, while valuing all students' ways of knowing and doing science.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>5h: Setting up and managing small group work to develop understanding of problems or phenomena.</p> <p>h. Make adjustments based on observations of individual students, groups, and their sensemaking.</p>	<p>CK B: Content Pedagogy</p> <p>CKB1: the role of scientific phenomena and problems in three-dimensional teaching and learning and their role in connecting science disciplines.</p>	<p>VB: Community Knowledge Building - Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.</p> <p>B. A scientific community ensures a collaborative evidence-based approach to addressing beliefs and biases while valuing other ways of knowing and doing science.</p>

S2.2 Design three-dimensional learning experiences to connect to and build upon the lives of learners by leveraging learners' prior experiences and knowledge, using varying research-based pedagogies such as talk and group work in ways that are culturally sustaining and enhance scientific ways of thinking.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>8e: Learning about students' cultural, religious, family, intellectual, personal experiences, and resources for use in science instruction.</p> <p>e. Design learning experiences to grow out of the lives of learners.</p>	<p>CK B: Content Pedagogy</p> <p>CKB2: appropriate research - based student-centered, culturally-relevant, disciplinary - based 3D instructional approaches; leveraging learners' prior experiences and knowledge, varying activity structures, talk and group work for science. For example, they should be expected to elicit learners' thinking, cultural and community connections, and curiosity when making sense of phenomena.</p>	<p>ID: Science for All - teachers are guided by the value that all students have a rightful presence in science</p> <p>D. Pedagogies that are culturally sustaining can be used to leverage and enhance scientific ways of thinking and to respect students' cultures</p>

S2.3 Uncover and consider students’ verbal and visible thinking to plan and implement appropriate differentiation and research-based pedagogical strategies to support and prioritize student needs, perspectives, questions and problems so that all students develop conceptual scientific knowledge.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>2d: Eliciting and interpreting students’ thinking to develop scientific understanding of phenomenon or solve problems.</p> <p>d. Uncover and consider students’ verbal and visible thinking to reveal novel points of view, new or alternative ideas, partial understandings, and students’ everyday language and experiences to benefit future instruction.</p>	<p>CK B: Content Pedagogy</p> <p>CKB3: appropriate differentiation strategies and research-based pedagogical strategies to support students with a variety of cognitive, emotional, physical and other needs and strengths so that all students develop conceptual knowledge.</p>	<p>VF: Community Knowledge Building - Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.</p> <p>F. Science teaching must be student-centered; prioritizing student needs, perspectives, questions and problems within classroom instruction as authentic scientific work.</p>

S2.4 Support students to construct arguments to develop and defend explanations of scientific phenomena or solutions to engineering problems through the applications of appropriate scientific practices and cross cutting concepts so that students may be empowered to contribute to scientific problem solving in their community and in the world.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3e: Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <p>e. Support students to interpret evidence, construct explanations, and support explanations with arguments about phenomena or problems.</p>	<p>CK B: Content Pedagogy</p> <p>CKB4: engagement of students in applying science practices and crosscutting concepts, such as clarifying relationships, and identifying natural patterns from empirical experiences in lessons, curricula and assessments.</p>	<p>IIIF: Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students.</p> <p>F. Empowering students toward action that contributes to scientific problem solving in their community and in the world.</p>

S2.5 Create opportunities for students to value diverse ways of thinking that build on their histories and experiences, while mobilizing social capital to engage all students in solving problems using engineering practices.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>8d: Learning about students' cultural, religious, family, intellectual, personal experiences, and resources for use in science instruction.</p> <p>d. Create opportunities for students to engage in diverse sense-making building on their community histories, values, and practices.</p>	<p>CK B: Content Pedagogy</p> <p>CKB5: engineering practices wherein students design, construct, test and optimize possible solutions to a problem in support of science learning and how it is similar or different from science.</p>	<p>IE: Science for All - teachers are guided by the value that all students have a rightful presence in science.</p> <p>E. Social capital can be mobilized to ensure opportunities for higher- order and complex thinking for all students in science across school systems.</p>

S2.6 Build mutual trust with students through caring support and alignment of instruction and assessment strategies which address student prior knowledge and partial understandings while navigating tensions between alternative and canonical ideas or ways of knowing.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>1b: Building respectful relationships</p> <p>b. Build mutual trust.</p>	<p>CK B: Content Pedagogy</p> <p>CKB6: alignment of instruction and assessment strategies which address student prior knowledge and alternative conceptions to support instructional decision-making and navigate tensions between alternative ideas and ways of knowing (which may be derived from various cultures) and canonical science ideas. Example strategies include: referring to evidence, continuing to consider/debate to work through the ideas, focusing on the most important disciplinary / explanatory ideas and understanding when it is appropriate and necessary to create space for learners to grapple with alternative ideas.</p>	<p>IIB: Whole Child Framework- teachers are guided by the tenets of the whole child framework.</p> <p>B. Each student's development in using science and engineering practices and crosscutting concepts is supported by a caring adult through leveraging community resources and scaffolded sensemaking (Supported).</p>

S2.7 Select and integrate science-specific technological tools which engage learners in three dimensional learning to explore, describe, and explain phenomena and support students’ conceptual understanding.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3c: Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <p>c. Select and modify instructional materials to create learning environments that engage learners in using the disciplinary core ideas, science and engineering practices and crosscutting concepts to explore, describe, and explain phenomena.</p>	<p>CK B: Content Pedagogy</p> <p>CKB7: integration of science-specific technologies to support all students’ conceptual understanding of science and engineering.</p>	<p>IVE: Disciplinary Literacy -Teachers are guided by a stance that communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication.</p> <p>E. Technology is an important means for obtaining, communicating and evaluating information.</p>

S2.8 Uncover and consider students’ thinking to select appropriate instructional strategies that illustrate the interdisciplinary nature of science and engineering and that allow students to demonstrate sensemaking and understanding in different, valid, and informative ways.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>2d: Eliciting and interpreting students’ thinking to develop scientific understanding of phenomenon or solve problems.</p> <p>d. Uncover and consider students’ verbal and visible thinking to reveal novel points of view, new or alternative ideas, partial understandings, and students’ everyday language and experiences to benefit future instruction</p>	<p>CK B: Content Pedagogy</p> <p>CKB8: appropriate instructional strategies which illustrate the interdisciplinary nature of fundamental principles, processes and problems in science and engineering.</p>	<p>IIIE: Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students.</p> <p>F. Students demonstrate understanding in different, valid, and informative ways and it is necessary to provide different options for how students show their sense-making.</p>

S2.9 Support students to persevere in making sense of new observations, information or data and to develop arguments supported by credible evidence and valid reasoning using connections to other core disciplines (mathematics, social studies and English language arts).		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>4f: Leading science discourse in order to make sense of phenomenon or solve problems.</p> <p>f. Support students to persevere in making sense of new observations, information or data.</p>	<p>CK B: Content Pedagogy</p> <p>CKB9: connections to other core disciplines (mathematics, social studies and English language arts) within the science standards.</p>	<p>IVD: Disciplinary Literacy -Teachers are guided by a stance that communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication.</p> <p>D. Scientific argument must transparently communicate ideas supported by credible evidence and valid reasoning.</p>

HS.S3. Impact on Learning

Well-prepared beginning science teachers:

S3.1 Give specific and timely verbal feedback to support student sense-making via formative assessment used to recognize and assess learners' ideas, life experiences and understanding, while engaging students in high-level challenges that build toward citizenship, stewardship, and lifelong community engagement.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>7b: Providing oral and written feedback to students about phenomena or scientific problems.</p> <p>b. Give specific feedback in a timely fashion to support student thinking and affirm student knowledge and skills.</p>	<p>CK C: Impact on Student Learning</p> <p>CKC3: use formative assessments to recognize and assess learners' ideas, life experiences and learning beyond the technical scientific language by evaluating samples of learners' work and classroom interactions to determine the nature and depth of learner sensemaking and leverage ongoing changes in student's learning to adjust instruction.</p>	<p>IID: Whole Child Framework- teachers are guided by the tenets of the whole child framework.</p> <p>D. Each student has access to high-level challenges that build citizenship, stewardship, and lifelong engagement to ensure access to future school and career opportunities in STEM fields (Challenged).</p>

S3.2 Prepare constructive written feedback for students from assessments that are designed to show learning and application of three dimensional understanding in order to move them toward productive sensemaking situated within their lived experiences, building on existing ideas, assets, resources, and ways of knowing.		
Science Teaching Practices	Core Knowledge	Guiding Principles
7a: Providing oral and written feedback to students about phenomena or scientific problems. a. Prepare constructive written feedback to students that continues to strengthen relationships and move students toward productive sense-making.	CK C: Impact on Student Learning CKC1: use assessments that show students have learned and can apply disciplinary knowledge, nature of science, science and engineering practices, and crosscutting concepts in practical, authentic, and real-world situations.	IIIC: Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students. C. Learning is best situated within students' lived experiences, building on existing student ideas, assets, resources, and ways of knowing.

S3.3 Reflect on, interpret, and purposefully disaggregate summative assessment data to inform future planning and teaching, with particular attention to student demographics and learning progress, being thoughtful about how assessment information is used, and the potential impact on students' identities as scientists.		
Science Teaching Practices	Core Knowledge	Guiding Principles
6c: Checking student understanding and scientific sensemaking during and at the conclusion of lessons. c. Reflect and interpret student thinking and understanding	CK C: Impact on Student Learning CKC2: Use summative purposeful disaggregated assessment data or information to inform future planning and teaching, with particular attention to student demographics and learning progress.	IIID: Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students. D. Assessments could be tied to negative outcomes on students' identity as scientists. Teachers must be thoughtful with regard to modalities, feedback and how assessment information is used.

HS.S4. Safety

Well-prepared beginning science teachers:

<p>S4.1 Select and modify instructional materials and activities to apprentice students and build their agency in safety techniques for the purpose of exploring phenomena or solving problems using knowledge about procurement, preparation, use, storage, dispensing, supervision, and disposal of chemicals/materials/equipment.</p>		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3c: Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <p>c. Select and modify instructional materials to create learning environments that engage learners in using the disciplinary core ideas, science and engineering practices and crosscutting concepts to explore, describe, and explain phenomena.</p>	<p>CK D: Safety</p> <p>CKD1: activities appropriate for the abilities of students that demonstrate safe techniques for the procurement, preparation, use, storage, dispensing, supervision, and disposal of all chemicals / materials / equipment used within their grade band and disciplines.</p>	<p>IVB: Disciplinary Literacy -Teachers are guided by a stance that communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication.</p> <p>B. Agency within a discipline is highly connected to the literacies and communication practices of that discipline.</p>

S4.2 Establish shared ownership within the entire classroom community of roles, routines, and safety protocols to minimize hazardous situations, implement emergency procedures, maintain safety equipment, and follow policies and procedures that comply with established state and national guidelines and standards, and best professional practices while monitoring, coaching, and providing feedback to collaboratively create a physically safe environment.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>5d: Setting up and managing small group work to develop understanding of problems or phenomena.</p> <p>d. Establish roles and routines, as well as monitor, coach, and provide feedback on implementation.</p>	<p>CK D: Safety</p> <p>CKD2: How to recognize hazardous situations including overcrowding; implement emergency procedures; maintain safety equipment; provide adequate student instruction and supervision; and follow policies and procedures that comply with established state and national guidelines, appropriate legal state and national safety standards (e.g., OSHA, NFPA, EPA), and best professional practices (e.g., NSTA, NSELA). how to recognize hazardous situations including overcrowding; implement emergency procedures; maintain safety equipment; provide adequate student instruction and supervision; and follow policies and procedures that comply with established state and national guidelines, appropriate legal state and national safety standards (e.g., OSHA, NFPA, EPA), and best professional practices (e.g., NSTA, NSELA).</p>	<p>IIA: Whole Child Framework- teachers are guided by the tenets of the whole child framework.</p> <p>A. Each student learns in an environment that is physically safe, adhering strictly to science safety protocols, while also emotionally safe for intellectual risk taking and building a culture that supports public reasoning (Safety).</p>

S4.3 Plan intentionally for discourse around ethical and legal decision-making adhering strictly to science safety protocols with respect to safe and humane treatment of all living organisms including their collection, care and use in and out of the classroom, and creating an environment that is safe for students who have varying perspectives on the treatment of living organisms.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>4a: Leading science discourse in order to make sense of phenomenon or solve problems.</p> <p>a. Plan intentionally for discourse with multiple access points.</p>	<p>CK D: Safety</p> <p>CKD3: ethical decision-making with respect to safe and humane treatment of all living organisms in and out of the classroom, and compliance with the legal restrictions and best professional practices on the collection, care, and use of living organisms as relevant to their grade band and disciplines.</p>	<p>IIA: Whole Child Framework- teachers are guided by the tenets of the whole child framework.</p> <p>A. Each student learns in an environment that is physically safe, adhering strictly to science safety protocols, while also emotionally safe for intellectual risk taking and building a culture that supports public reasoning (Safety).</p>

HS.S5. Professional Knowledge and Skills

Well-prepared beginning science teachers:

S5.1 Use and reflect on assessment evidence of the three-dimensional aspects of student science understanding while honoring students' multiple ways of knowing, doing, and communicating their thinking to continually improve instructional effectiveness and professional growth that ensures a rightful presence in science for all students.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>6b: Checking student understanding and scientific sensemaking during and at the conclusion of lessons.</p> <p>b. Use or modify both formative and summative assessments that elicit evidence of the three dimensional aspects of student science understanding.</p>	<p>CK E: Professional Knowledge and Skills</p> <p>CKE1: critical reflection on science teaching to continually improve instructional effectiveness.</p>	<p>IVC: Disciplinary Literacy</p> <p>-Teachers are guided by a stance that communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication.</p> <p>C. Honoring multiple ways of knowing, doing, and communicating scientific thinking ensures a rightful presence in science for all students.</p>

S5.2 Examine and manage professional growth while engaging in professional learning to remain current and open to learning from students and colleagues to deepen and grow in teaching knowledge, skills and dispositions, including the ability to employ science-specific technology and be culturally responsive.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>1f: Building respectful relationships</p> <p>f. Examine and manage self in relationship with students.</p>	<p>CK E: Professional Knowledge and Skills</p> <p>CKF2: How to access specific opportunities for professional development to deepen their science-specific content knowledge and pedagogical knowledge as well as practices.</p>	<p>VE: Community Knowledge Building - Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.</p> <p>A. Science teachers must be open to learning from students and colleagues in order to grow in their teaching, scientific understanding, and ability to be culturally responsive.</p>

HS.S6: Specialized Content Knowledge

Well-prepared beginning science teachers:

S6.1 Use tools and strategies to ensure all students have equitable opportunities to understand the nature of science and the cultural norms and values inherent in the current and historical development of scientific knowledge, empowering students toward action that contributes to scientific problem solving in their community and in the world.		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>4h: Leading science discourse in order to make sense of phenomenon or solve problems.</p> <p>h. Use tools and strategies to ensure all students have equitable opportunities to participate and share their thinking (norms, talk moves, high cognitive demand tasks).</p>	<p>CK F: Content Knowledge</p> <p>CKF1: the nature of science and the cultural norms and values inherent to the current and historical development of scientific knowledge.</p>	<p>IIIF: Scientific Agency - teachers are guided by recognition of the importance of building scientific agency within themselves and students.</p> <p>B. Empowering students toward action that contributes to scientific problem solving in their community and in the world.</p>

S6.2: As part of planning, unpack big ideas within a learning sequence to identify crosscutting concepts, disciplinary core ideas, science and engineering practices, and ensure the incorporation of science-specific technologies and contributions of diverse populations to science.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3a: Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <p>a. Unpack the big ideas, identify anchoring event, tie the essential question to the anchoring event, recognize the sensemaking that occurs within the unit to develop the storyline.</p>	<p>CK F: Content Knowledge</p> <p>CKF2: crosscutting concepts, disciplinary core ideas, practices of science and engineering, the supporting role of science-specific technologies, and contributions of diverse populations to science.</p>	<p>IVD: Disciplinary Literacy -Teachers are guided by a stance that communication is critical to doing science and that teachers are responsible for apprenticing their students in that communication.</p> <p>D. Scientific argument must transparently communicate ideas supported by credible evidence and valid reasoning.</p>

S6.3 Reflect and interpret student thinking and understanding while considering science standards, learning progressions, and sequencing of science content to scaffold and support student sense-making.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>6c: Checking student understanding and scientific sensemaking during and at the conclusion of lessons.</p> <p>c. Reflect and interpret student thinking and understanding.</p>	<p>CK F: Content Knowledge - teachers understand all dimensions of the key standards and progressions critical to their grade band and disciplines.</p> <p>CKF3: science standards, learning progressions, and sequencing of science content for teaching the appropriate grade band and discipline area.</p>	<p>IIB: Whole Child Framework- teachers are guided by the tenets of the whole child framework.</p> <p>B. Each student’s development in using science and engineering practices and crosscutting concepts is supported by a caring adult through leveraging community resources and scaffolded sensemaking (Supported).</p>

S6.4 Select and modify instructional materials that engage students in using grade-appropriate elements of the disciplinary core ideas, science and engineering practices and crosscutting concepts to explore, describe, and explain phenomena or design solutions within a classroom environment where all students participate in the co-construction of knowledge.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3c: Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <p>c. Select and modify instructional materials to create learning environments that engage learners in using the disciplinary core ideas, science and engineering practices and crosscutting concepts to explore, describe, and explain phenomena.</p>	<p>CK F: Content Knowledge</p> <p>CKF4: grade appropriate elements of the practices, disciplinary core ideas, and cross-cutting concepts within instructional materials.</p>	<p>VA: Community Knowledge Building -</p> <p>Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.</p> <p>B. Science understanding is socially constructed in an inquiry-based classroom environment where all students engage in the building of knowledge or possible solutions.</p>

S6.5 Engage students in sensemaking cycles of activity to develop understanding of the major scientific concepts, principles, theories, laws, and interrelationships to explain phenomena and solve problems together as a classroom community of learners.

Science Teaching Practices	Core Knowledge	Guiding Principles
<p>3. Engaging students in sensemaking cycles of activity to explain phenomenon or solve problems.</p> <ul style="list-style-type: none"> a. Unpack the big ideas, identify anchoring event, tie the essential question to the anchoring event, recognize the sensemaking that occurs within the unit to develop the storyline. b. Engage students in questioning about a phenomenon or problem. c. Select and modify instructional materials to create learning environments that engage learners in using the disciplinary core ideas, science and engineering practices and crosscutting concepts to explore, describe, and explain phenomena. d. Engage students in using science and engineering practices and crosscutting concepts to make sense of a phenomenon or solve a problem. e. Support students to interpret evidence, construct explanations, and support explanations with arguments about phenomena or problems. f. Support students to connect experiences back to the phenomena or problem in the unit. 	<p>CK A: Content Knowledge - teachers understand all dimensions of the key standards and progressions critical to their grade band and disciplines. CKF5: understand the major concepts, principles, theories, laws, and interrelationships of their grade band and disciplines and supporting fields (e.g., mathematics).</p>	<p>V. Community Knowledge Building - Teachers will be guided by humility and the stance that scientific knowledge is socially constructed.</p> <ul style="list-style-type: none"> A. Science understanding is socially constructed in an inquiry-based classroom environment where all students engage in the building of knowledge or possible solutions. B. A scientific community ensures a collaborative evidence-based approach to addressing beliefs and biases while valuing other ways of knowing and doing science. C. Science learning is most meaningful when situated within the community to ensure authenticity and cultural relevance as problems are solved in real-world contexts in collaboration with various stakeholders. D. Science teachers must engage in self-reflection in order to build awareness of the impact of one’s own culture and biases in the classroom and on the co-construction of knowledge.

S6.5 Continued		
Science Teaching Practices	Core Knowledge	Guiding Principles
<p>g. Prepare to allow students to use their everyday language to engage in discourse with new content/phenomenon and encourage the use of technical vocabulary over the course of an instructional unit/cycle.</p>		<p>A. Science teachers must be open to learning from students and colleagues in order to grow in their teaching, scientific understanding, and ability to be culturally responsive.</p> <p>B. Science teaching must be student-centered; prioritizing student needs, perspectives, questions and problems within classroom instruction as authentic scientific work.</p> <p>C. Classroom culture must promote and support risk-taking inherent in public reasoning needed for science learning.</p>
