

ARGININOSUCCINIC ACIDEMIA (ASA)

FAMILY FACT SHEET

What is a positive newborn screen?

Newborn screening is done on tiny samples of blood taken from your baby's heel 24 to 36 hours after birth. The blood is tested for rare, hidden disorders that may affect your baby's health and development. The newborn screen suggests your baby might have a disorder called ASA.

A positive newborn screen does not mean your baby has ASA, but it does mean your baby needs more testing to know for sure.

You will be notified by your primary care provider or the newborn screening program to arrange for additional testing.

What is ASA?

ASA affects an enzyme needed to break down certain proteins and remove waste ammonia from the body.

A person with ASA doesn't have enough enzyme to break down protein and remove ammonia from the body. Ammonia is very harmful to the body and can cause health problems if not removed.

ASA is a genetic disorder that is passed on (inherited) from parents to a child. The mother and father of an affected child carry a gene change that can cause ASA. Parents usually do not have signs or symptoms, or even know they carry the gene change.

What problems can ASA cause?

ASA is different for each child. Some children have a mild form of ASA with few health problems, while other children may have a severe form of ASA with serious complications.

If ASA is not treated, a child might develop:

- Feeding problems
- Sleepiness
- Vomiting
- Muscle weakness
- Seizures
- Swelling of the brain
- Coma

It is very important to follow the doctor's instructions for testing and treatment.

What is the treatment for ASA?

ASA can be treated. Treatment is life-long and can include:

- Low protein diet - a dietitian will help you set up the best diet for your child.
- Special formula low in protein.
- Medications to help prevent high ammonia.

Children with ASA should see their regular doctor, a doctor who specializes in ASA, and a dietitian.

Prompt and careful treatment helps children with ASA live the healthiest lives possible.
