

Assessing Processes for Giving a Strong Recommendation

Other questions to consider:

1. Who monitors updates to ACIP recommendations? How are they communicated to the appropriate staff?
2. Does the site have an immunization champion to promote strong recommendation best practices?
3. Do staff receive training regarding effective communication techniques related to vaccination?
4. Can ongoing training for responding to vaccine hesitancy be incorporated into staff meetings?
5. Has the site adopted methods for using presumptive language for telling parents/patients about vaccinations due during the visit?
