MICHIGAN DENTAL PROGRAM

Why is dental care important for people with HIV?

-  Maintains a person's ability to eat, drink and speak comfortably.
-  Reduces the presence of bacteria, lowering the impact on the immune system.
-  Medications can cause dry mouth, increasing the risk of tooth decay.
-  Increases whole body health and well-being.

Contact MDP for more information on enrollment at 1-844-648-3384.
