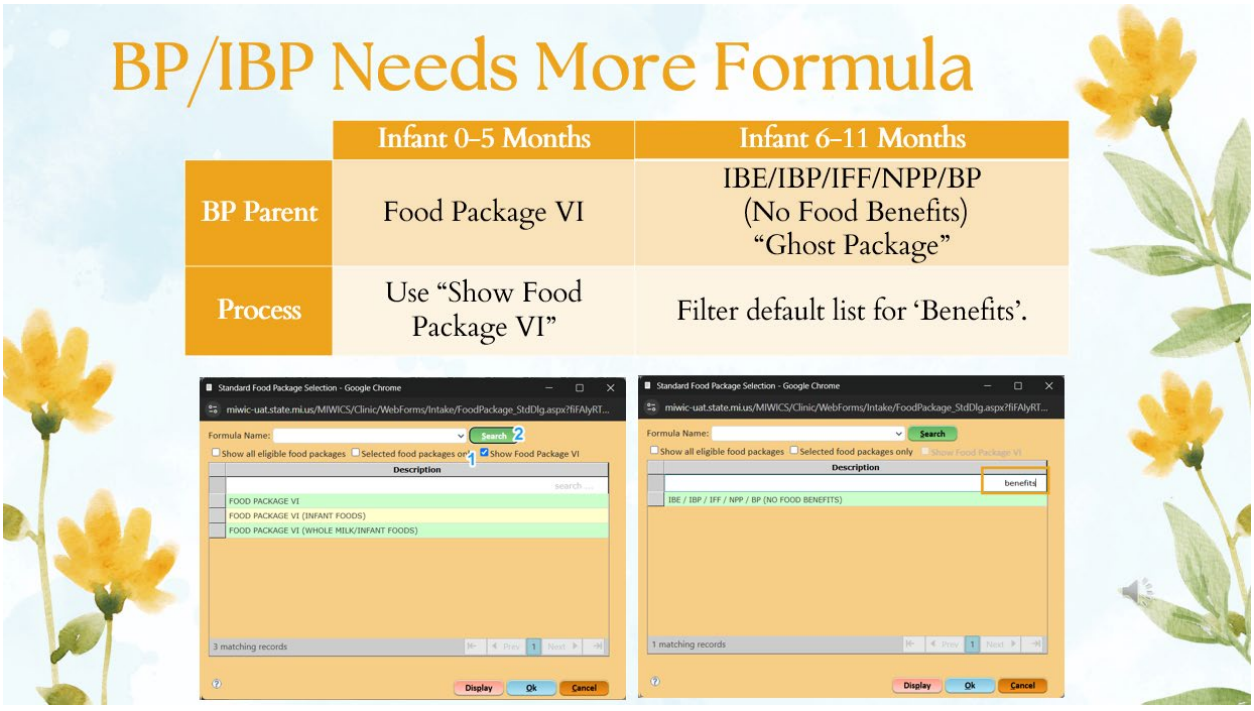
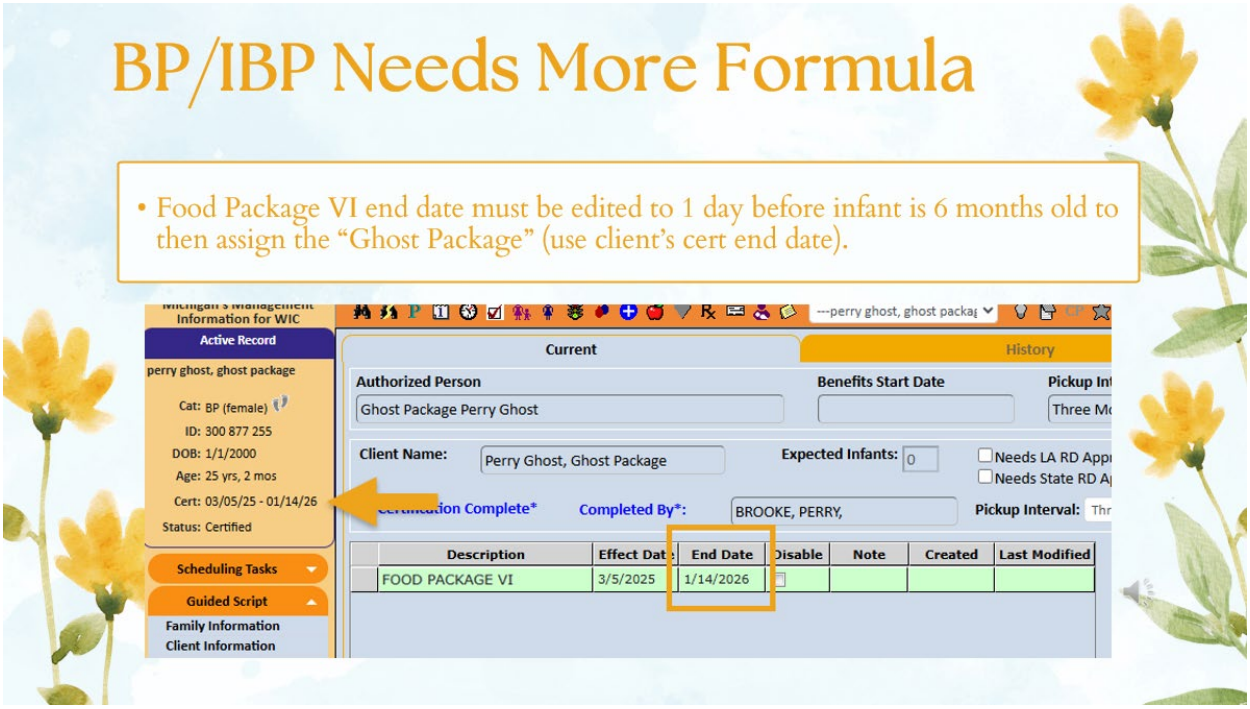
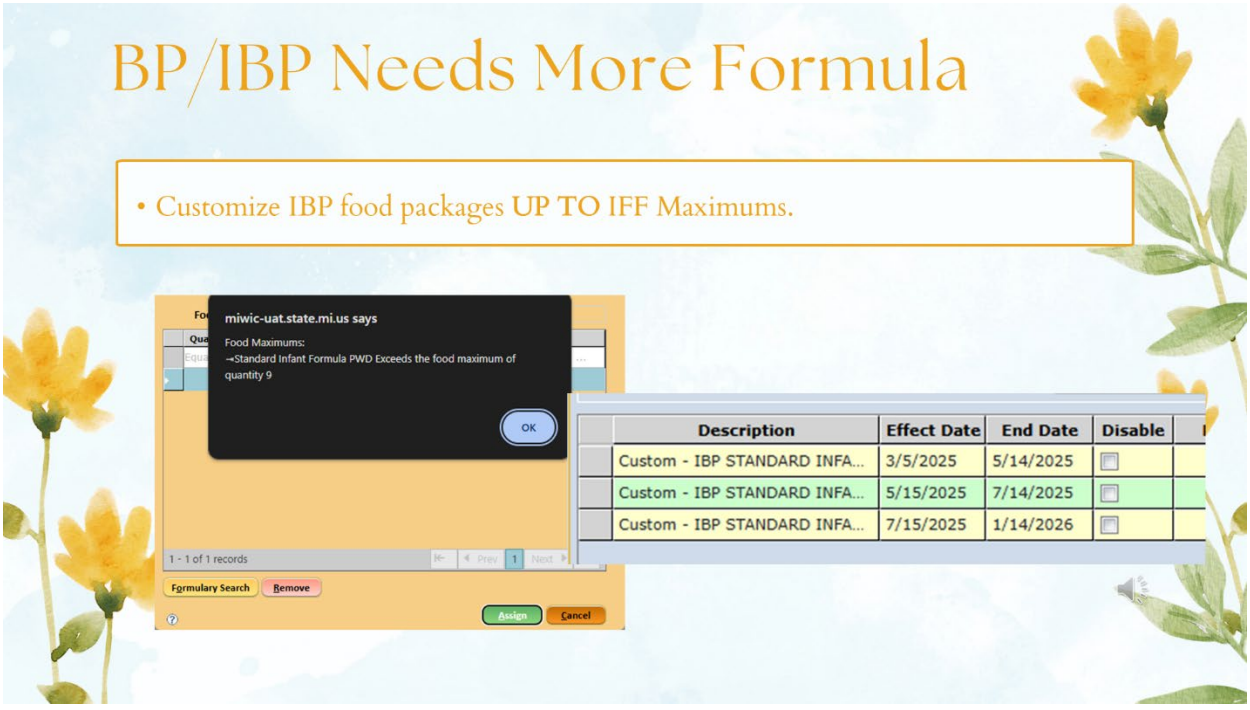
How to assign more formula to a partially breastfeeding (BP/IBP) dyad

1. Assign Food Package VI to the BP parent. Ensure the BP parent is linked to the IBP baby in the IBP client's Client Information screen.
   - **BP client whose infant is UNDER 6 months**:
     - Check the "Show Food Package VI" checkbox and press search.
   - **BP client whose infant is OVER 6 months**:
     - Filter the food prescription pop-up for "Benefits" and select the IBE/IBP/IFF/NPP/BP (No Food Benefits) package, also known as the "Ghost Package".



2. Edit the BP client's Food Package VI to 1 day before the infant is 6 months old. Assign the "Ghost Package" to cover remainder of client's cert period.



3. After assigning the BP client the Food Package VI or "Ghost Package":
   - Customize the IBP food package according to the assessed need documented in BF Info Q5 How much and how often is this child being fed in a 24-hour period of time.
   - The system will enforce all IFF maximums per each age range.


Note: The IBP infant will NOT be assigned an IFF food package.
