

MDHHS

Laboratory Influenza Page

For this Influenza Season, the Michigan Department of Health and Human Services (MDHHS) Bureau of Laboratories will be performing testing for all flu strains which include 2009 A H1, seasonal flu A types and Flu B. In addition, MDHHS continues to highly encourage confirmatory influenza testing for cases of public health interest (ICU hospitalizations, severely ill pregnant women, patients with unusual and severe presentations, deaths) and for congregate setting outbreak/cluster investigations. MDHHS is reminding laboratories to please submit all rapid positive flu for confirmation.

Please note the approved specimen types for Flu PCR analysis have been expanded to include all of the following:

- Upper respiratory tract specimens such as nasopharyngeal swabs (NP), nasal swabs (NS), throat swabs (TS), dual NP/TS swabs, nasal washes (NW), and nasal aspirates (NA) Lower respiratory tract specimens such as bronchoalveolar lavage (BAL), bronchial washes (BW), tracheal aspirates (TA), sputum, lung tissue, and viral culture
- Lower respiratory tract specimens such as bronchoalveolar lavage (BAL), bronchial washes (BW), tracheal aspirates (TA), sputum, lung tissue, and viral culture

For the most current updates, see the latest [MIFluFocus report](#) . For the latest information on the current influenza season, see the [MDHHS Influenza Page](#).

2021-2022 Influenza Season Report

MDHHS Laboratory Data

The data shown here are the results obtained by the MDHHS Virology Laboratory from specimens for targeted public health testing plus surveillance testing through the Michigan Sentinel Physician and Sentinel Laboratory Programs. The Sentinel Physician Program consists of medical provider sites from a variety of geographic locations throughout

Michigan enrolled in the sentinel surveillance program. These providers represent private practice for adult and pediatric patients, as well as urgent and emergency care facilities, nursing homes and university health services. Michigan is now conducting routine influenza surveillance year round. Thus, MDHHS requests submission of two to three specimens for influenza A and B viral culture four times during the year: early influenza season, when influenza virus is beginning to circulate; middle season, during the peak of influenza activity; late season, as influenza activity diminishes; and in the summer months. Participation in this program is voluntary.

The influenza season runs from October through the end of September each year.

2021-2022 Northern Hemisphere Seasonal Influenza Vaccine Components

The egg-based vaccines contain the following components:

A/Victoria/2570/2019 (H1N1) pdm09-like virus
A/Cambodia/e0826360/2020 (H3N2)-like virus
B/Washington/02/2019 (B/Victoria lineage)-like virus
B/Phuket/3073/2013-like virus (Yamagata lineage)

The recombinant or cell-culture quadrivalent vaccines contain the following components:

A/Wisconsin/588/2019 (H1N1) pdm09-like virus
A/Cambodia/e0826360/2020 (H3N2)-like virus
B/Washington/02/2019 (B/Victoria lineage)-like virus
B/Phuket/3073/2013-like (Yamagata lineage) virus

Specimen Collection and Shipping

Approved specimen types for influenza testing at the MDHHS BOL:

- Upper respiratory tract specimens such as nasopharyngeal swabs (NP), nasal swabs (NS), throat swabs (TS), dual NP/TS swabs, nasal washes (NW), and nasal aspirates (NA)
- Lower respiratory tract specimens such as bronchoalveolar lavage (BAL), bronchial washes (BW), tracheal aspirates (TA), sputum (PCR only), lung tissue, and viral culture
