

Driving Criteria

Rule 325.22132(m) “Requires that each individual operating a licensed life support vehicle during an emergency response or patient transport has completed a vehicle operation education and competency assessment.” This will be verified during a Life Support Agency inspection.

Rather than reviewing and approving specific courses, course content will be reviewed to ensure that it meets the minimum criteria. This may occur by either classroom or video based education and driving through a low speed course designed to teach the use and measure competency. The course shall also include supervised public roadway driving where the skills are demonstrated in actual traffic at normal speeds. All driving programs must meet the following educational criteria:
