## Audit Search Enhancements

- Re-organized Audit Trail Screen
  - Separates info relevant to the case and the audit trail

### Audit Trail Enhancements

- **New Audited Actions:**
  - Reassign Investigator
  - Update Case Reporting Tab
  - Update Demographic Tab
  - Update Referrer Tab
  - Update Case Detail Form
  - Update Case Status
  - Change Reportable Condition
  - Lab Added with New Case

---

---

---

---

---

---

---

---

---

---

---

### Audit Trail Enhancements

- **Re-named Actions:**
  - 'Case Merge Data' → 'Dup Case Data Entered'
  - 'Patient Merge Data' → 'Dup Patient Data Entered'
  - 'Case Merged' → 'ELR Case Merged'
- The date stamp for 'Data Entered' actions now list when the data was first entered instead of when the merge occurred.

---

---

---

---

---

---

---

---

---

---

---

### User Permission Audit Trail

New: Shows permissions and history of changes

- Includes date of change
- Only changes made after this release will be included.

---

---

---

---

---

---

---

---

---

---

---

### Census 2010 Data

- 2010 Census data for Michigan will be added to MDSS in February 2012.
  - Not available with the new release, but a separate announcement will be made when the data becomes available online.

---

---

---

---

---

---

---

---

### Closed Schools Archiving

- Schools that are closed can now be removed from aggregate reporting.
- Once the schools are removed, previous data will be available for reports and exports, but new data will no longer be able to be entered.

---

---

---

---

---

---

---

---

### Control Measures

- New 'Control Measures Section' added to 6 disease PDF Forms
  - Botulism
  - STEC
  - Hepatitis A
  - Measles
  - Meningococcal Disease
  - Tularemia

---

---

---

---

---

---

---

---

## Fixes

- The redup unmerge error that could occur during an unmerge operation has been corrected; cases that have been sent back to the dedup queue and have been deleted will no longer appear on the unmerge list
- The initial case entry date will now be used for cases pushed back to the dedup queue
- Fixes made to STD Field Records
- A session cleaner was added to address session corruption – variables held in the memory are reset
