

Cancer Incidence and Mortality  
for Select Sites by Michigan State  
House District

# Methods

Cancers are coded to the International Classification of Diseases for Oncology, Third Edition (ICD-O-3). Incidence rates include invasive cancers only, except for *in situ* bladder cancers being included in the overall cancer rates. This is consistent with the methodology of the Surveillance, Epidemiology, and End Results Program (SEER). Age-adjusted rates are computed by the direct method and are age-adjusted to the 2000 U.S. population.

Cancer incidence is provided by the Michigan Cancer Surveillance Program and includes cases from years 2014-2016.

Cancer mortality refers to deaths in which the underlying death reported was cancer (ICD-10=C00-C97). Age-adjusted rates are computed by the direct method and are age-adjusted to the 2000 U.S. population.

Cancer mortality is provided from the Division for Vital Records and Health Statistics at the Michigan Department of Health and Human Services from the years 2015-2017.

The rank column in the following data tables ranks the districts from lowest cancer burden (1) to highest cancer burden (110).

# Key Findings

Districts in Detroit, MI have the highest cancer incidence and mortality rate for all sites as well as colorectal, lung and bronchus, and female breast cancer. The districts around Grand Rapids, MI also have high rates for cancer incidence and the district in Flint, MI has high rates for cancer mortality.
