

# Hepatitis A

## is Spreading in Michigan

**Talk to your pharmacist today to see if you should get vaccinated.**

### Who is at high risk?

The following groups are at the highest risk during this outbreak:

- Men who have sex with men.
- Persons who use injection or non-injection drugs.
- Persons currently homeless or in temporary housing.
- Persons who have been recently incarcerated.
- Persons with chronic liver disease (including hepatitis B, C, or cirrhosis).
- Persons who have been exposed to someone with hepatitis A virus infection (within two weeks of exposure) to prevent infection. This is called 'post-exposure prophylaxis' or 'PEP'.

**Ask your pharmacist today about hepatitis A vaccine!**

The best protection is to get vaccinated; it is highly effective.
