

**Remember  
to Retest in  
3 Months!**

## **Why Should You Get Retested for Chlamydia or Gonorrhea?**

- Even after effective treatment, it is very common to get infected again with chlamydia or gonorrhea soon after your first infection.
- Often, there are no symptoms so you may not know that anything is wrong.
- Getting another infection may cause more damage than the first.
- This damage can prevent men and women from having children in the future.
- This damage can also make it painful to have sex.

**Be sure to make an appointment for your retest!**
