Overview:

The BH Registry file will be used to validate both MH and SUD consumers in CHAMPS Encounter processing. If there is not a consumer record in the BH Registry file the Encounter will be rejected.

Submission Process:

The PIHP's will send a BH Registry inbound file (5867) to their respective DEG mailboxes. They will then be forwarded to CHAMPS for processing. If the file is successfully processed by CHAMPS an outbound error file (5868) will be sent to the PIHP's DEG mailbox. In this file there may be error and/or warning messages. Errors will reject the associated record. Warnings will accept the record. In addition to the 5868 error file, two additional files will be sent to the DEG. One is an inbound completion acknowledgement and the other is an outbound completion acknowledgement. The inbound acknowledgement will show the number of records that had no errors and processed and if there were any records with errors that weren't processed. The outbound acknowledgement will show that the inbound file (5867) was successfully processed.

If there is no outbound file (5868) created, this means the inbound file had errors that wouldn't allow CHAMPS to process it. An inbound acknowledgement will be created listing the reason(s) the file could not be processed. In this case an outbound acknowledgement is not produced.

File Naming Conventions:

For the Inbound file (5867) use: filename 5867@dchbull

The Outbound file (5868) will use: 5868.datetimestamp
