Candida auris Surveillance Report
April 6, 2026

Michigan *C. auris* Case Count:	Total Cases	Clinical Case	Screening Case
	2,595	**654**	**1,941**

Cases initially identified as screening cases that later develop a positive clinical culture will solely be reported as a clinical case to avoid double counting the same individuals.
240 individuals converted from a screening to clinical case.

Fig 1. *Candida auris* Cases in Michigan by Case Type[a], 2021 – April 6, 2026

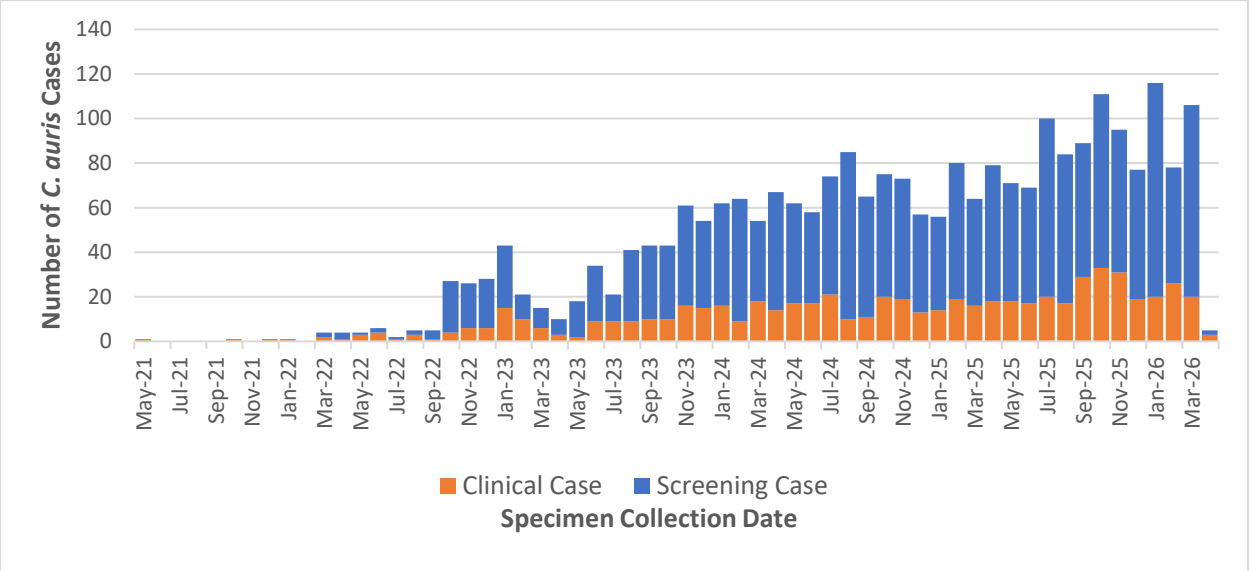

Fig 2. Jurisdiction of Health Care Facility at *C. auris* Case Detection[b]

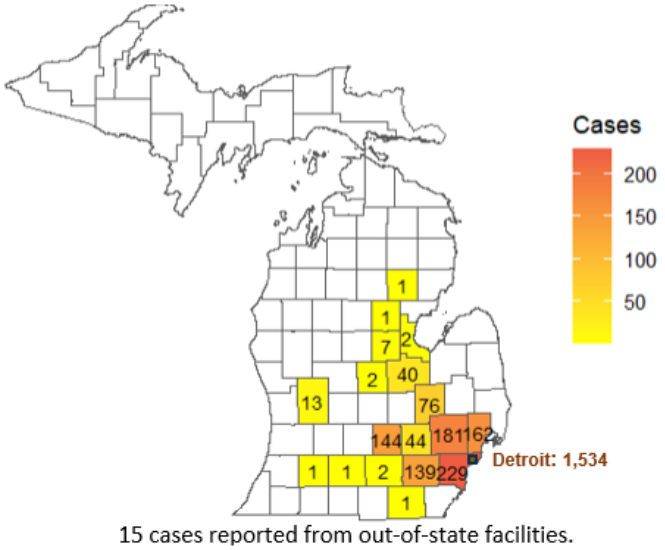

15 cases reported from out-of-state facilities.

[a] Case Type: Clinical Case – *C. auris* identified in a specimen collected during the course of clinical care for the purpose of diagnosis or treatment of disease, such as from a blood, urine, respiratory, wound; Screening Case – *C. auris* identified in a sample collected to detect colonization, such as the axilla and/or groin.

[b] Location at Detection – Health care facility where the individual was present at the time the *C. auris* positive specimen was collected, which may or may not reflect the location where *C. auris* was acquired.

Data updated on 1st and 3rd week of the month. Demographic data will be updated every 6 months (January and July).
