NHSN LTCF HAI Reporting

SARMED REZZO-LTC EPIDEMIOLOGIST MDHHS

SHARP Unit-Background

The Surveillance for Healthcare-Associated and Resistant Pathogens Unit (SHARP) was created in 2009 to:

- Coordinate activities related to HAI surveillance, response, and prevention in Michigan
- Improve surveillance and detection of antimicrobial-resistant pathogens and HAIs
- Identify and respond to disease outbreaks
- Use collected data to monitor trends
- Educate healthcare providers, state and local public health partners, and the public on HAIs

NEW Initiative:
Improve NHSN for HAI Reporting

- Recent CDC funding: Enhancing NHSN's use by increasing the enrollment of HAI reporting into NHSN for the LTCF component.

- Only have a handful of facilities that have ever reported their HAI data into NHSN's LTCF component and looking to change that

- **Primary Objectives of Initiative:**
  - Bolster the use of NHSN for HAI reporting in LTCFs
  - Identify areas of HAI prevention/control improvement in LTCFs
  - Increase adherence to prevention measures
  - Improve and standardize HAI surveillance
  - Increase understanding of how HAIs are transmitted in your facility and community
  - Reduce HAI Prevalence/Incidence

Initiative Benefits:
Enrolling in the LTCF Component

The power of data

Benefits of visibility of HAI data in the LTC space

◦ Awareness of HAI infections in facility and identifying areas of improvement

◦ Ability to inform action for infection prevention purposes and tracking progress

◦ MDHHS also generates monthly reports for participating facilities

◦ Additional support from MDHHS SHARP Unit and Infection Prevention Resource & Assessment Team (IPRAT) and ability to collaborate to help reduce burden of HAIs.

◦ Improve Patient Safety

Real-Time Data tools and Analysis

◦ NHSN gives healthcare facilities to review their data in real-time using embedded analysis tools, which can be shared with clinicians and facility leadership to help inform infection prevention strategies.

Facility-specific Technical Assistance and Collaborative Opportunities

Workgroup/Group Calls

- Similar to NHSN Workgroup for Hospital Component
- Bi-Monthly meetings to discuss recent NHSN changes, share best practices, reviewing HAI data, trainings/learning opportunities, other topics and updates of interest
- Smaller group of engaged facilities to discuss HAI topics
- Access to Subject Matter Experts
- Review of MDHHS generated reports covering participating facilities

Module Access/Familiarity-Requirements

For the 2022-2023 flu season, CMS is now requiring facilities to sign up for the Healthcare Personnel Safety (HPS) Component to file annual summary for staff flu vaccination status.

- This is the same location as some of our HAI reporting

- Facilities that enroll in HAI reporting with NHSN will have visibility in the HPS Component on a regular basis and would have additional familiarity and knowledge over facilities that login once per year only to meet the CMS requirement.

Educational Resources/Professional Development

A portion of CDC's SHARP Project IV funding can go to facilities for participation in NHSN Reporting.

- Funding designed to be used for professional development of IP staff and to enhance IP staff to offset this additional reporting.

$2500 Professional Development Incentive,

- To be used for Guidelines, Conferences, Textbooks & Memberships to IP Organizations
- CDI/MDRO and UTI reporting required to be eligible for funding, Prevention Process Measures Optional

Who should Participate

Engaged facilities interested in and with capacity to conduct HAI reporting
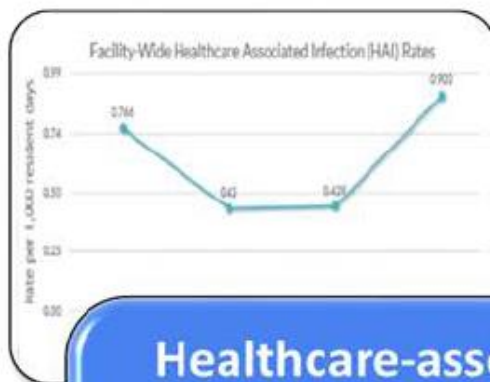

Facility staff knowledgeable in HAIs in the facility

Facilities with buy-in from leadership

NHSN's Resources/Process

- NHSN INFRASTRUCTURE, NAVIGATING TO REPORTS, AND ADDITIONAL NHSN RESOURCES

Standardized Surveillance Criteria and Analysis for the Following Modules

Healthcare-associated Infections (HAI)

- Urinary tract infections (UTI)
  - Catheter and non-catheter associated
- **Planned**
  - Respiratory Tract infection
  - Skin and Soft Tissue Infection

Laboratory-identified (LabID) Event

- *C. difficile* Infection (CDI)
- Multi-drug Resistant Organisms (MDRO)

Prevention Process Measures

- Adherence to Gown and Glove Use
- Adherence to Hand Hygiene

Prevention Process Measures

Long-term Care Facilities (LTCF) Component

Use the Long Term Care Facility (LTCF) Component to track infections and prevention process measures, systematically, to identify problems, improve care, and determine progress toward national healthcare-associated infection goals.

Facilities Reporting in LTCF

Nursing homes, skilled nursing, chronic care, and Intermediate Care Facilities for individuals with Intellectual disability (ICF/ID).

Assisted living facilities can only report in the Prevention Process Measures module.

⚠ Long-term acute care hospitals must use the LTACH Facilites.

Next Steps

Agreement to participate & Letter of Intent

Sign Up for NHSN's Module, MRP, UTI and CDI/MDRO monthly reporting (optional prevention process measures)

Added to participating facility list for additional info, addition to workgroup, and further instructions

To Sum Up:

Benefits of using NHSN for HAI Reporting:
- Educational Resources/Professional Development
- Module Expertise and Familiarity
- Access to User Group
- Real-Time Data analysis and visualizations
- Ability to share data with clinicians and facility leadership to leverage resources
- SHARP and IPRAT assistance to help lower HAI burden

If you're already using NSHN-Share data with MDHHS NHSN Group
- Additional resources to help you understand your data
- Local prompt response to question

Thank You!
