Appendix 8: Example Independent Rate Models		

1. Executive Summary

1.1 INTRODUCTION

Milliman, Inc. (Milliman) has been retained by the State of Michigan, Department of Health and Human Services (MDHHS) to provide actuarial and consulting services related to the development of comparison rates for its Medicaid behavioral health (BH) managed care program. The impetus behind this project was to better understand the observed variation in benefit cost and administrative expenses reported by the ten prepaid inpatient health plans (PIHPs) responsible for managing the care of the behavioral health managed care program enrollees. The primary goal of this project is for MDHHS to develop comparison rates based on the reasonable and necessary costs associated with the delivery of behavioral health services covered under the Medicaid managed care contract, consistent with the access and quality of care provisions specified in U.S.C. §1396a(a)(30)(A). Additionally, under the guidelines of policy bulletin 21-39¹ and Section 964 in Public Act 166 of 2020² and Public Act 87 of 2021³, MDHHS is required to develop an annual report providing the development of the comparison rates for standardized Medicaid behavioral health supports and services⁴.

We refer to the fee schedule rates in this report as “comparison rates” as MDHHS is not currently mandating their use (e.g., through a minimum fee schedule or state directed payment). The comparison rates are not used in the BH capitation rate development. The current capitation rate development process considers, among other data points, provider utilization and provider payments reported by PIHPs as observed in the encounter data and encounter quality initiative (EQI) reports. To the extent that PIHPs and providers negotiate their contracted rates through reliance on the comparison rates, capitation rates for future periods will reflect such changes through the annual rebasing of capitation rate development as such changes emerge.

The comparison rates in this report rely extensively on data provided by MDHHS, stakeholders, and national data sources. If the underlying data or information is inaccurate or incomplete, the results of our analysis may, likewise, be inaccurate or incomplete. Milliman is not advocating for, recommending, or endorsing any specific adjusted payment rate approach.

1.2 COMPARISON RATES

Appendices 1A and 1B illustrate comparison rates for the majority of services included in the SFY 2025 April 1 Behavioral Health (BH) Code Sets⁵. Appendix 1A illustrates the comparison rates for services that were developed as point estimates, consistent with the prior year’s methodology. For the SFY 2026 report, we have developed comparison rate ranges for select services that are provided by direct care workers (DCWs). Figure 1 summarizes the comparison rate ranges for those services and Appendix 1B reflects the comparison rates in more detail for the low and high rate ranges. The methodology for the development of the rate ranges is discussed in *Section 3.3.6 Rate range assumptions*.

FIGURE 1: SFY 2026 COMPARISON RATE RANGES

PROCEDURE CODE	SERVICE DESCRIPTION	LOW RATE	HIGH RATE
H0043	Comprehensive Community Support Services (per diem)	\$ 361.56	\$ 487.37
H0043TG	Comprehensive Community Support Services (per diem) - 16 or more hours	571.97	746.62
H2014	Skills training and development	10.96	12.13
H2015	Comprehensive Community Support Services (per 15 minutes)	7.41	11.23
H2015UJ	Comprehensive Community Support Services - Overnight Health & Safety	6.48	8.03
T1005HM	Respite care services - Less Than Bachelor's Level	7.60	9.36
T2026	Overnight Health and Safety (per diem)	204.79	253.70
T2027	Overnight Health and Safety (per 15 minutes)	6.48	8.03

Note: This figure includes H0043, H0043TG, and T2026 which are per diem codes that MDHHS anticipates providers might utilize for select Habilitation Supports Waiver (HSW) enrolled individuals beginning October 1, 2025.

1.3 METHODOLOGY UPDATES FOR SFY 2026

We made the following updates to the comparison rates methodology for purposes of SFY 2026 comparison rates development. All other rate development methodologies are consistent with the methodology performed in the SFY 2025 comparison rate analysis⁶.

1.3.1 Comparison rate ranges

MDHHS has observed material variations in the unit cost contracted between the PIHPs and providers for certain DCW services that may correspond to differences in certain underlying rate model assumptions. Based on discussions with MDHHS, for SFY 2026, we developed a range of comparison rates for targeted DCW services. The rate ranges incorporate low and high assumptions for certain parameters like indirect time, transportation costs, insurance benefits, and paid time off assumptions. The services listed in Figure 1 reflect the selected services for which a range was developed for the SFY 2026 comparison rates. *Section 3. Methodology* outlines the specific assumptions that varied to develop the rate range.

1.3.2 Minimum wage and sick days

On February 21, 2025, two laws went into effect in Michigan:

- The state increased the minimum hourly wage rate from \$10.56 per hour to \$12.48.
- Michigan Earned Sick Time Act (ESTA) requires employers to provide all eligible non-exempt employees with an accrual of one hour of sick time per thirty hours worked up to a specified limit that will roll over to the following year.

Trended wages at the 25th, 50th, and 75th percentile from the provider survey and BLS all exceed \$12.48; therefore, no adjustment was made for minimum wage considerations.

Based on discussions with MDHHS, we determined that no updates were required for ESTA given the comparison rate assumptions already include sick time in the PTO assumptions.

1.3.3 Administrative expense development

Administrative expense assumptions are developed using results from a provider survey released in January 2025. The provider survey data is used to inform provider administrative percentage assumptions specific to each service category. Based on discussions with MDHHS, we have updated the administrative expense assumption methodology to be an average over two years of provider survey responses to mitigate some of the year-over-year fluctuations. *Section 3.3.4 Administration/program support/overhead* outlines the methodology for developing the SFY 2026 administrative expense assumptions.

2. Background

2.1 PROJECT OVERVIEW

The primary goal of this project is for MDHHS to develop comparison rates based on the reasonable and necessary costs associated with the delivery of behavioral health services covered under the Medicaid managed care contract, consistent with the access and quality of care provisions specified in U.S.C. §1396a(a)(30)(A). The comparison rates do not constitute a requirement or commitment that PIHPs or other payors adjust current payment arrangements to match these rates, but rather the rates serve as an informative benchmark for payers, providers, and other stakeholders. Of particular note:

- The term “comparison rate” is used in this report for the following reasons:
 - Absent future state policy changes, the comparison rates will not be directly incorporated into the behavioral health managed care capitation rate calculations.
 - To reflect that legislative decisions would be needed for any rate adoption.
- MDHHS is not currently considering the broad adoption of comparison rates developed under this project as a state fee-for-service fee schedule or a state-directed payment under managed care. MDHHS will not be repricing services using the comparison rates reflected in this report when determining capitation rates to be paid to the PIHPs. However, there is one case in which services will be repriced for purposes of capitation rate development using different sources than the EQI reports:
 - **Applied behavior analysis (ABA) services** – ABA services, specifically procedure code 97153, has been included in boilerplate language (sections comprising provisional language in a budget bill that direct, limit, or restrict line-item expenditures, express legislative intent, and/or require reports for program oversight) with a defined reimbursement rate of not less than \$16.50 per unit or \$66.00 per hour.
- The current capitation rate development process considers, among other data points, provider utilization and provider payments reported by PIHPs as observed in the encounter data and encounter quality initiative (EQI) reports. To the extent that PIHPs and providers negotiate their contracted rates through reliance on the comparison rates, capitation rates for future periods will include consideration of such changes through the annual rebasing of capitation rate development as such changes emerge.
- The comparison rates will be used to identify outliers, which may then be further explored so that MDHHS understands the variation in reported costs for services.

Potential future changes to fee schedules and/or managed care capitation rates will be evaluated for materiality and applicability, and any changes will need to comply with the relevant federal and state regulations.

MDHHS anticipates that this project will also provide better insight into the current administrative costs associated with related services incurred across the system. The long-term goal of this project is to develop a process to better understand future cost changes in the behavioral health system and to allow for potential updates to the comparison rates as needed.

This report documents the methodology, assumptions, and resulting comparison rates resulting from the application of rate models which were developed specifically for this project using an independent rate model (IRM) approach. These rate models are based on a set of assumptions that may or may not benefit from additional refinement for individual services, and the resulting comparison rates should not be taken as MDHHS policy decisions. For example:

- MDHHS will continue to collect wage data over time, which will inform the direct care staff and supervisor wages component of the payment rates.
- Stakeholders have provided feedback that current workforce shortages may be impacting wages for all provider groups. This report reflects wages reported as of January 2025 and trended to SFY 2026, as well

as an employee turnover assumption of 50%. This issue will continue to be monitored as part of future updates to the comparison rates.

For the SFY 2026 comparison rate development, Provider Survey results collected under Policy 21-39 are used to inform provider administrative percentage assumptions specific to each service category. MDHHS will continue to collect administrative data over time and will use the provider-submitted results to inform these assumptions.

This report includes the most highly utilized services from a statewide total expenditure perspective. Figure 2 provides a list of the service groups included in this report, which represent approximately 86% of non-hospital-based behavioral health expenditures.

FIGURE 2: SERVICES INCLUDED WITHIN COMPARISON RATES

SERVICE GROUP	PROCEDURE CODES
Additional Support Services	H0036, H0038, H0045, H2030, H2033, S5116, S5150, S5151, T1005
Applied Behavior Analysis Services	0373T, 97151, 97153, 97154, 97155, 97156, 97157, 97158
Assertive Community Treatment (ACT)	H0039
Assessments and Testing	0362T, H0001, H0002, H0031, T1001
Case Management / Treatment Planning	H0032
Community Living Supports	H0043, H2015, H2016+T1020, T2026, T2027
Evaluation and Management	99205, 99211, 99213, 99214, 99215
Medication Administration	96372
Medication Assisted Treatment	G2076, G2077, G2078, H0020
Other	S5110, S5111, T1002
Psychiatric diagnostic evaluation	90791, 90792
Psychotherapy	90832, 90834, 90837, 90846, 90847, 90849, 90853
Residential Services	H0019
Skill Building	H2014
Therapeutic Behavioral Services	H2019
Vocational Supports	H2023
Withdrawal Management	H0010, H0012

2.2 STAKEHOLDER ENGAGEMENT

The assumptions used for the development of the comparison rates were developed in conjunction among MDHHS, Milliman, stakeholders, and build upon the results of the previous comparison rates. We are relying on these assumptions and believe them to be reasonable and appropriate for this use. To the extent that the data and information provided to develop these assumptions are not accurate, or are not complete, the values provided in this correspondence may likewise be inaccurate or incomplete.

The development of the comparison rates reflects intensive work with Community Mental Health Services Programs (CMHSPs), PIHPs, and providers to better understand the costs associated with services delivered in the behavioral health program. This process included the following efforts to better understand the resources required to provide these services. To the extent that a minimum fee schedule is being considered for any services in this report, MDHHS should consider additional stakeholder engagement to identify any adjustments to modeling assumptions that would support effective implementation.

2019 CMHSP and PIHP Site Visits. In an initial effort to better understand underlying costs and cost variation, we conducted nineteen site visits to CMHSPs and PIHPs spanning all ten PIHP geographic regions in addition to performing data collection. These site visits served to:

- Provide additional context to reported cost data, including allocation methodologies to report unit cost
- Capture additional information outside the data collection tool
- Facilitate a better understanding of the CMHSP and PIHP perspective on the behavioral health delivery system in Michigan

Independent Rate Model (IRM) Workgroup Meetings. Between 2019 and 2021, we participated in MDHHS-led bi-weekly IRM workgroup meetings with MDHHS and subject matter experts (SMEs) representing CMHSPs and PIHPs. The primary focus of IRM workgroup discussions was to understand the reasonable and necessary costs for each of the major covered services, which have been reflected in rate models illustrated in this report. For some services, such as ABA therapies and substance use disorder (SUD) services, we included additional SMEs from the provider network to support the development of the rate models. The IRM workgroup operated at MDHHS' direction and guidance and additional workgroup discussions can be held in the future, if necessary, including SMEs on the identified topic(s).

Provider Stakeholder Engagement Meetings and Related Frequently Asked Questions (FAQs). In September and October 2020, MDHHS held stakeholder engagement meetings open to all network providers. Separate sessions were held for mental health outpatient services, supports services, ABA therapies, and SUD services. The primary goal of the stakeholder meetings was to introduce the IRM approach and to gather feedback on key services. Feedback from these stakeholder meetings was robust, and to be fully responsive to comments and questions received during the meetings, we prepared a document with answers to frequently asked questions, which we then distributed to all participants that had logged into the sessions with a valid email address. Each summer since 2020, at the direction of MDHHS, we have held annual all-provider stakeholder meetings to cover updates to the comparison rates. During and following the all-provider stakeholder meetings, we gather feedback and questions for consideration in the development of the following year's comparison rates.

Provider staffing and expense survey. MDHHS collected data on direct staff and supervisor wages, benefits, paid time off, and training assumptions from providers via a survey released in January 2025. A version of the Provider Survey has been administered since 2019. The Provider Survey also collected data to help MDHHS better understand the key components of costs incurred by providers contracting with the CMHSPs and PIHPs. The Provider Survey was reviewed by stakeholders and MDHHS prior to release. This year's survey also collected information regarding the impact of both the minimum wage and ESTA state law changes would have on providers relative to the current compensation practices.

The Provider Survey was released to all network providers participating in Michigan's Medicaid program that provide covered behavioral health services, intellectual/developmental disability services, ABA therapies, and SUD services. All behavioral health providers, excluding hospitals and FQHCs, were required to complete the template. 506 unique providers with usable data, 27 of which are CMHSPs, submitted a required survey and we have relied upon this submitted data for certain assumptions (e.g., hourly wages, administrative and program support costs) and for context on other underlying assumptions included in the comparison rates.

Section 3.3 Rate Model Components details our methodology for determining the use of the Provider Survey data for wages, benefits, PTO assumptions, and for the administrative and program support assumptions underlying the independent rate models. Other information captured within the Provider Survey will be considered for future comparison rates.

3. Methodology

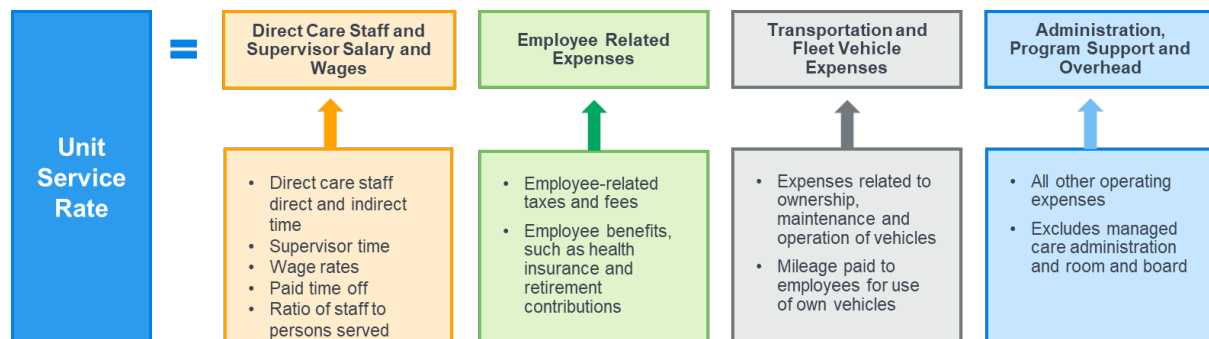

3.1 RATE MODEL COMPONENTS AND ASSUMPTIONS

The independent rate model (IRM) approach serves to capture and document the average expected costs a reasonably efficient Michigan provider would incur while delivering the service. One of the benefits of the IRM approach is to provide transparency as to the expected reasonable and necessary costs⁷ required to provide the service. Another benefit of this approach is that rates are developed independently from actual costs incurred, which facilitates an understanding of the resulting comparison rates under different assumptions. Rather than relying on actual costs incurred from a prior time period to determine what the rates should be, the IRM approach builds rates from the "ground up" and considers what the costs may be to provide the service based on a set of assumptions. To the extent actual costs incurred by service providers are affected by external factors, such as legislatively-mandated funding levels made available for services that are not consistent with factors that drive the market, the IRM approach provides a means to communicate what costs may reasonably be incurred, and the issues faced by providers, so decision makers can more equitably allocate resources based on this information.

To develop comparison rates for each of the services included in Figure 2, we developed several different rate models, which are described in more detail in *Section 3.4 Rate Model Types*. Each of these rate models can be adjusted by applying different assumptions specific to how each of the services is expected to be provided. Although the rate models may vary across services, they all include similar types of assumptions, cost components, and elements.

Figure 3 provides the key high-level components included in the IRM approach.

FIGURE 3: HIGH-LEVEL INDEPENDENT RATE MODEL COMPONENTS

We used an IRM approach to calculate the average costs that a reasonably efficient Michigan provider would be expected to incur while delivering these services. As denoted by its description, **independent** rate model, this approach builds rates from the ground up, by determining the costs related to the individual components shown below and summing the component amounts to derive a comparison rate for each service.

The IRM approach can be distinguished from other provider payment methodologies in that it estimates what the costs for each service could be given the resources (salaries and other expenses) reasonably expected to be necessary, on average, while delivering the service. This approach relies on multiple independent data sources, in addition to input from SMEs, to develop rate model assumptions to construct the comparison rates.

⁷ Determinations of allowable costs must be consistent with 2 CFR § 200, and in principle, the term "reasonable" relates to the prudent and cost-conscious buyer concept that purchasers of services will seek to economize and minimize costs whenever possible. The term "necessary" relates to the necessity of the service. To be "necessary", it must be a required element for providing care to individuals as specified by the approved federal waiver(s), approved State Plan or other federal authority.

By contrast, many cost-based methods rely primarily on the actual reported historical costs incurred while delivering services, which can be affected by operating or service delivery decisions made by providers. These operating or service delivery decisions may be inconsistent with program service delivery standards or by potential program funding limitations that do not necessarily consider the average resource requirements associated with providing these services. Figure 4 provides an overview of the key components and elements of the IRM approach.

FIGURE 4: INDEPENDENT RATE MODEL COMPONENTS

COMPONENT	ELEMENTS	SUB-ELEMENTS	CLARIFYING NOTES
Direct Care Staff and Supervisor Salary and Wages	Service-related Time	Direct time	Corresponding time unit or staffing requirement assumptions were not defined. Adjusted for staffing ratios for some services (i.e., more than one person served concurrently, e.g., in group counseling sessions or for residential services).
		Indirect time	Service-necessary planning, note taking and preparation time.
		Transportation time	Travel time related to providing service.
		PTO/training/ conference time	Paid vacation, holiday, sick time, training and conference time. Also considers additional training time attributable to employee turnover.
		Supervisor time	Accounted for using a span of control variables.
	Wage rates	Can Vary for Overtime and Weekend Shift Differentials	Wage rates vary depending on the types of direct service employees, which have been assigned to provider groups.
Employee Related Expenses	Payroll-related Taxes and Fees	Federal Insurance Contributions Act (FICA), Federal Unemployment Tax Act (FUTA), State Unemployment Insurance (SUI), workers compensation	Applicable to all employees and varies by wage level assumption.
	Employee benefits	Health, dental, vision, life and disability insurance, and retirement benefits	Amounts may vary by provider group.
Transportation	Vehicle operating expenses	Includes all ownership and maintenance-related expenses	Varies by service with costs estimated based on the federal reimbursement rate.
Administration, Program Support, Overhead	All other business-related costs	Includes program operating expenses, including management, accounting, legal, information technology, etc.	Excludes room and board expenses.

While the IRM aims to be as inclusive as possible in explicitly accounting for the key cost components of delivering a specific service, there are situations that may require special considerations of the cost structure or cost elements unique to a specific service operation environment or need. The comparison rates are intended to be a reference point and are not meant to limit the ability of MCOs and providers to consider these special situations as a part of payment rate negotiations.

Generally, the IRM approach constructs a comparison rate for each service as the sum of the costs associated with each of the components shown above. The cost and other assumptions associated with each component are adjusted to reflect the expected use of resources separately for each service.

Appendices 1A and 1B provide a summary of the comparison rates, including the amount attributable to each of the high-level rate components shown in Figure 3, for each service and provider group combination included in this report. Appendix 1A reflects the comparison rates for services where a single comparison rate is developed while Appendix 1B reflects the comparison rates for services where a low and high rate range is developed. Appendices 1C and 1D provide the rates by region type (Urban, Rural, and Frontier) for services expected to vary in cost by region type (services that do not vary by region type are not included). Please note that all figures and appendices in this report, except for Appendices 1C and 1D, reflect statewide average rates, which were calculated using a blend of the Urban, Rural, and Frontier settings based on Michigan behavioral health program expenditures. The regional comparison rates in Appendix 1C reflect services where a single comparison rate is developed while Appendix 1D reflects the regional comparison rates for services where a low and high rate range is developed. Appendix 2 provides a summary of the key rate model assumptions used for the rates shown in Appendix 1. The remainder of this report describes the IRM approach, methodology, and assumptions used to develop comparison rates illustrated in Appendices 1A through 1D.

3.2 PROVIDER GROUPS

As described above, for many of the behavioral health services covered by Michigan's Medicaid program, there are a range of provider types that are authorized to perform the services as direct care staff. One of the recommendations from the IRM workgroup included the assignment of each provider type or direct care staff position into one of a discrete set of provider groups, based on similar characteristics, such as educational degrees, professional credentials, and expected wage rates. This recommendation provided a way to balance the need for the rates to reflect appropriate variation in labor costs by type of direct care staff and supervisors, and at the same time reasonably limit the number of rates needed for each service. Types of direct care staff can vary from behavioral health technicians and/or counselors to physicians and/or psychiatrists. Expected education levels can range from direct care staff with high school degrees to fully accredited Physicians. Positions can also vary depending on experience and earned professional credentials and certifications.

Model assumptions that drive the direct care staff salaries and wages, PTO assumptions, and ERE components, which are further described in the next section, *Section 3.3 Rate Model Components*, were determined at the provider group level. For each of the provider groups, where appropriate, the resulting comparison rate varies depending on the input assumptions (e.g., provider group wage rates).

Figure 5 documents the provider groups included in the development of the comparison rates and the corresponding modifiers. Appendix 3 includes a listing of all provider types along with their corresponding provider group modifier.⁸

Where appropriate, more than one comparison rate is developed for services with multiple qualifying provider group modifiers, reflecting the specific wage rates, PTO and ERE assumptions attributable to the different provider groups. Special attention was paid to developing the provider groups taking into consideration the need for ease of understanding, sufficient granularity to accurately reflect the market experience, and alignment to the appropriate modifiers.

FIGURE 5: PROVIDER GROUPS

PROVIDER MODIFIER	PROVIDER GROUP
AE	Dietician
AF	Specialty Physician
AG	Physician
AH	Clinical Psychologist
CO	Occupational Therapist Assistant
CQ	Physical Therapist Assistant
HM	Less Than Bachelor's Level
HN	Bachelor's Level
HO	Master's Level
HP	Doctoral Level
SA	Physician Assistant
TD	Registered Nurse
TE	Licensed Practical Nurse
WP	Trained Parent
WQ	Independent Facilitator
WR	Peer Recovery Coach
WS	Certified Peer Specialist
WT	Youth Peer Specialist
WU	DD Peer Mentor

⁸ Provider groupings for HM (Less Than Bachelor's Level), HN (Bachelor's Level), HO (Master's Level), HP (Doctoral Level), and AH (Clinical Psychologist) have options for ABA services and non-ABA services.

3.3 RATE MODEL COMPONENTS

The first two components shown in Figure 3 above – Direct Care Staff Supervisor Salaries and Wages, and Employee Related Expenses (EREs) – comprise the largest portion of the expected costs built into the rate models. The models have been designed to account for differences in salaries and wages as well as the EREs attributable to the different types of direct care service staff and supervisors authorized to provide the services.

This subsection provides a description of the key rate components listed in Figure 3, which are:

- Direct care staff and supervisor salaries and wages
- ERE
- Transportation – vehicle-related expense
- Administration, program support, and overhead

3.3.1 Direct care staff and supervisor salaries and wages

The direct care staff salary and wage components are typically the largest components of the comparison rates, comprising the labor-related cost, or the product of the time and expected wage rates for the direct care staff who deliver each of the services. This component includes costs associated with the direct staff expected to deliver the services and their immediate supervisors.

1. Direct care staff and supervisor time assumptions

In the IRM approach, direct staff time is categorized as direct time, indirect time, transportation time, and supervisor time. Adjustments for PTO, holidays, and in some cases overtime, are also incorporated. Figure 6 provides a description of each of these sub-elements and related adjustments.

FIGURE 6: SUMMARY OF SUB-ELEMENTS RELATED TO DIRECT STAFF AND SUPERVISOR TIME

TIME SUB-ELEMENT	DEFINITION	ASSUMPTIONS
Direct Care Staff Direct Time	<ul style="list-style-type: none"> • The amount of time incurred by direct care staff that can be billed for services provided to individuals. • For example, a service billed as a 15-minute unit assumes that the direct care staff direct time is also at least 15 minutes, an assumption that is consistent with service billing guidelines. Examples of the most common unit types, which vary by service, are a set number of minutes per service unit (e.g., 15-minute, 30-minute, 60-minute), per encounter, per day, or per month. 	<ul style="list-style-type: none"> • For service units that are not defined by a time unit (e.g., per encounter or per diem), we developed rate model direct time assumptions based on input from members of the IRM workgroup, feedback from subject matter experts engaged for specific services and feedback from other stakeholders. • Direct time is captured in the Provider Survey and will be reviewed in future comparison rate reports.
Direct Care Staff Indirect Time	<ul style="list-style-type: none"> • Time that must be spent by non-supervisory direct care staff to provide the service, but is not spent "person facing", and does not result in a billable unit of service. • Time incurred for necessary activities such as planning, summarizing notes, updating medical records, and other non-billable but appropriate time not otherwise included in direct care staff direct time. • For most services, it is assumed that the indirect time does not result in a billable unit. In 2021 the American Medical Association (AMA) changed the service descriptions of select assessment services to allow specific indirect activities to produce a billable unit (e.g., 97151 and 99213), even when the time is not "person facing". For these services, the rate model reflects all billable time (both person facing and non-person facing) as direct time, and non-billable and non-client-facing time as indirect time. 	<ul style="list-style-type: none"> • Indirect time assumptions vary depending on the service. • Assumptions were developed based on input from the Provider Survey, the IRM workgroup, feedback from subject matter experts engaged for specific services, and other stakeholders. • For certain services, we have adjusted the indirect time assumptions to take into consideration time spent by direct care staff that ends up not being billable because individuals do not show up for scheduled appointments or services. See <i>Section 3.3.5. Other service-specific adjustments</i>, below, for more information related to these no-show adjustments, along with a description of the caseload efficiency factor, which is not specific to indirect time, but instead represents an adjustment to total expenses to account for differences between assumed and actual service caseloads.

TIME SUB-ELEMENT	DEFINITION	ASSUMPTIONS
Direct Care Staff Transportation Time	<ul style="list-style-type: none"> A provision for transportation time is included for services where it is expected that direct care staff will be required to travel to provide the service. 	<ul style="list-style-type: none"> Model transportation time assumptions, detailed in Figure 7, are based on: <ul style="list-style-type: none"> Estimates of average distance driven per service The amount of time it takes to travel that distance (based on average vehicle speed), which varies based on the region where the service is provided. When applicable, transportation time for direct care staff is adjusted to reflect the county in which the service is being delivered (e.g., allowing for more transportation time in rural areas as compared to urban areas).
PTO Adjustment Factor	<ul style="list-style-type: none"> Accounts for additional time that must be covered over the course of a year by other direct care staff, thereby representing additional direct care staff time per unit: <ul style="list-style-type: none"> Annual time related to paid vacation, holiday, and sick time. Annual training and/or conference time expected to be incurred by direct care staff and supervisors. Includes an adjustment that considers the amount of one-time training/onboarding and the frequency of this type of training time that can be attributable to employee turnover. 	<ul style="list-style-type: none"> Varies by provider group, based on information collected as part of the Provider Survey as well as feedback from the IRM workgroup and other stakeholders. For detailed assumptions related to the PTO adjustment by provider group, please see Appendix 4.
Overtime/Holiday Adjustment Factor	<ul style="list-style-type: none"> For certain services, such as licensed residential services that are staffed using a 24/7 staffing model, there is an expectation that the “typical” staffing model should include some incremental payment for overtime and holiday pay. 	<ul style="list-style-type: none"> Overtime/holiday pay – a “time and a half” assumption is applied to the underlying average hourly wage for staff for the applicable time. Licensed residential services -- “time and a half” assumption is applied to 9.8% of the total PTO-adjusted time required for the services, which is based on an assumed 10 holidays per year, and 7.25% of non-holiday time being paid at time and a half. The 7.25% non-holiday overtime assumption was based on input received from the IRM workgroup.
Supervisor Time	<ul style="list-style-type: none"> For most services included in this analysis, direct care staff providing services to individuals require supervision. Supervisors, commonly referred to as front line supervisors, are typically more experienced or higher credentialed provider types responsible for the direct oversight and supervision of those employees that are directly providing the services to individuals. Supervision of direct care staff does not typically result in a separate billable unit of service. Some organizations may not have second-line supervisors while other organizations may operate a two-tiered supervision approach to support direct care staff directly providing services. Supervisor responsibilities may vary, but primarily are on-site providing direct supervising, hiring, training and discipline of the direct care staff, whose primary responsibilities are providing services. Supervisor responsibilities may also include program planning and evaluation, advocacy, working with families, and working with community members. Supervisor time is determined through application of a “span of control” assumption, which is a measure of how many direct care staff a supervisor can supervise. 	<ul style="list-style-type: none"> SME input informed the identification of first-line and second-line supervisors for rate development. For most services, a supervisor span of control assumption of 10 was used, meaning that on average, every 10 hours of direct care staff time will require one hour of a supervisor’s time. This assumption is primarily based on an examination of rate development assumptions used in other states for similar services. This assumption was also confirmed to be reasonable for most services based on discussions with the IRM workgroup, although in several instances, was modified to reflect circumstances where higher or lower levels of expected supervision were needed. Supervisory assumptions are more intensive for evidence-based practices (EBPs) and reflect a span of control assumption of 8 based on incremental EBP supervision requirements and workgroup discussion. More information regarding EBPs can be found in <i>Section 4.4 Evidence-Based Practices Modifiers</i>. The span of control included in the rate models is inclusive of both first- and second- line supervisory staff.

2. Transportation time

Figure 7 provides the specific transportation assumptions used to identify direct staff transportation time for Frontier, Rural, and Urban area categories. These area categories were determined at the county level based on the county's population density.

FIGURE 7: TRANSPORTATION ASSUMPTIONS USED TO IDENTIFY DIRECT STAFF TRANSPORTATION TIME

AREA CATEGORIES	POPULATION DENSITY	AVERAGE MPH	AVERAGE PER TRIP TRANSPORTATION TIME (ONE-WAY)
Frontier	40 people per square mile	50 mph	40 minutes
Rural	Between 40 and 200 people per square mile	40 mph	20 minutes
Urban	More than 200 people per square mile	30 mph	20 minutes

Application of transportation time in the IRM considers the average number of trips made per day relative to the number of billable units and unique individuals served during an average day. As the number of billable units per individual per day increases, the transportation time associated with each billable unit decreases because the transportation time is distributed among all the billable units on the claim. Figure 8 provides additional detail.

FIGURE 8: IDENTIFICATION OF THE AVERAGE NUMBER OF TRIPS, BY DIRECT HOURS PER INDIVIDUAL PER DAY

AVERAGE EXPECTED HOURS PER SERVICE LOCATION	ASSUMPTION
Less than 2 hours	1.25 one-way trips are spread across the average billable units per claim. This would indicate that direct care staff may visit on average four individuals' service locations and then travel back to their main office during an average day for a total of 5 one-way trips.
2-4 hours	1.5 one-way trips are spread across the average billable units per claim.
Greater than 4 hours	2 one-way trips are spread across the average billable units per claim (i.e., direct care staff may only drive to one individual's home and back to their main office during an average day).

Figure 9 provides an example of how the transportation time per unit is calculated for H2015.

FIGURE 9 - TRANSPORTATION CALCULATION EXAMPLE - H2015

A	Direct Time Minutes per Unit	15 Minutes
B	Number of One-Way Trips Per Day*	2 One-Way Trips
C	Assumed One-Way Travel Time	21 Minutes
D = B * C	Assumed Total Minutes of Travel Time Per Day	42 Minutes
E	Average Number of Units per Day (Based on Data Analysis)	20.15 Units
F = A * E / 60	Average Total Direct Time Per Day	5.04 Hours
G = D / E	Assumed Travel Time Per 15 Minute Unit	2.1 Minutes

*Start with 1 assumed trip per day. If < 2 hours, then add .25 trips, If 2-4 hours, then add .5 trips, If 4+ hours then add 1 trip

*Units were aggregated at the HCPCS code level

*See Figure 12 for the development of the assumed one-way travel time

3. Wage assumptions for direct care staff and supervisors

The direct care staff hourly wage estimate for each provider group was developed using two data sources – May 2024 wage data from the Bureau of Labor Statistics (BLS) for Michigan and the Provider Survey results, which reflect wages as of January 1, 2025; all wages are trended to SFY 2026.

For SFY 2026 comparison rate development and in future years, Provider Survey results from CMHSPs will be excluded when developing wage estimates. The intent of this adjustment is to align the assumptions within the comparison rates to the entities delivering these services (non-CMHSP network providers contracting with CMHSPs or PIHPs).

We have aligned the provider types from each of the wage data sources (BLS and the Provider Survey) with the provider groups based on our understanding of the position responsibilities and feedback from the IRM workgroup.

We completed an outlier analysis of the reported wages within the Provider Survey and removed any reported wages that fell two standard deviations below or above the median. After the outlier analysis, we calculated weighted averages for each provider group by data source by determining the number of survey responses that are needed to have a probability, P , of being within a percentage, k , relative to the expected wage (we used the values $P = 95\%$ and $k = 10\%$); this methodology is outlined by the Office of the Actuary (OACT) at the Centers for Medicare and Medicaid Services (CMS).⁹ We then assigned a weight to the Provider Survey data based on our assessment of the credibility of the data and attributed the remaining weight to BLS data. Figure 10 provides a description of the survey weight selected for each provider group. While we show the 25th, median, and 75th percentile for each provider group, the percentile used for comparison payment rate development varies by service.

MDHHS has identified wage differentials by line of business (MH, Intellectual and Developmental Disabilities (IDD), SUD, ABA). The Provider Survey included separate rows to identify wages associated with each line of business. We assigned each provider to a single line of business corresponding to where they reported the majority of expenditures in the Provider Survey and aggregated their reported expenses to the assigned line of business. We reviewed survey wages within a given provider group across lines of business to determine if there were meaningful differences. For provider types within the less than bachelor's level, bachelor's level, master's level, and doctoral level provider modifiers, we determined ABA provider reported wages were meaningfully different than MH/IDD/SUD providers and have calculated separate blended wages (i.e., wages for behavioral technicians, BCaBAs, QBHP: BACB Approved Degree, licensed behavior analyst, licensed psychologist and limited licensed psychologist, BCBAAs, and BCBA-Ds). The wages for ABA providers under the Psychologist provider modifier AH are set equal to the non-ABA provider wages due to a lack of credible feedback from the Provider Survey for ABA providers under the AH modifier. Figure 10 shows the SFY 2024 median wage by provider group (separating out ABA providers from other providers) and the data source as well as the percentile amounts used in the rate models. The Specialty Physician provider modifier AF only utilized Provider Survey wages despite results not being fully credible as the selected BLS job title for Specialty Physician does not publish a median wage.

⁹For each unique modifier and ABA provider combination, the mean and variance of the submitted sample wages was calculated. Wages were assumed to be independently and identically distributed for each submission. Z0.975 is the z-score for the 97.5th percentile of the Standard Normal Distribution ($Z0.975 \approx 1.96$).

FIGURE 10: SUMMARY OF SFY 2026 HOURLY WAGES USED IN THE RATE MODELS

PROVIDER	DESCRIPTION	ABA PROVIDER	SURVEY WEIGHT	MEDIAN WAGE		HOURLY WAGE AMOUNTS USED IN RATE MODEL		
				PROVIDER SURVEY	BLS	25TH PERCENTILE	50TH PERCENTILE	75TH PERCENTILE
AE	Dietician	N	92.8%	\$ 33.76	\$ 38.20	\$ 30.80	\$ 34.08	\$ 38.08

Median wage amounts were trended using Federal Reserve Economic Data (FRED) for *Average Hourly Earnings of All Employees, Education and Health Services*¹⁰. For BLS wage amounts, trending was done from the published month of the BLS reporting period (May 1, 2024) to the midpoint of the SFY 2026 (April 1, 2026). For Provider Survey wage amounts, trending was done from the date reported wages were required to reflect (January 1, 2025) to the midpoint of the SFY 2026 (April 1, 2026).

¹⁰ Federal Reserve Economic Data. (April 2024). *Average Hourly Earnings of All Employees, Education and Health Services*. Retrieved from <https://fred.stlouisfed.org/series/CES6500000003>

A wage trend assumption of 3.70% has been selected for all provider group modifiers, excluding the Less Than Bachelor's Level HM modifier, in SFY 2026, which is an equal blending of the annualized trend of 3.82% from the latest six month rolling average of FRED wages (October 1, 2024 to March 1, 2025) and the annualized trend of 3.66% from the latest 18 month rolling average of FRED wages (October 1, 2023 to March 1, 2025).

A pre-COVID wage trend assumption of 2.19% is being continued for the Less Than Bachelor's Level HM provider group modifier as the wage levels have increased materially in recent years due to DCW direct payments.

Some services require specific types of staff to be available on an on-call basis. Examples include physicians or psychiatrists who are part of a multi-disciplinary team and are called upon to support the team or individual being served only when needed (e.g., physicians or psychiatrists required to be on-call 24/7). In some cases, we included on-call stipend payments to ensure availability of their unique services and in other cases we included a per hour add-on cost for individuals who are on call.

Stipend amounts and the per hour add-on amounts were determined primarily based on input from the IRM workgroup and are included in the total labor costs associated with providing the service.

The median wage rate used in the rate models for each data source can be found in Appendix 5A (Provider Survey for Direct Care and Supervisory Staff) and Appendix 5B (BLS). These appendices show the median wage rate by provider group and include a listing of the related provider types and average wages.

3.3.2 Employee related expenses (ERE)

This component captures the ERE expected to be incurred for direct staff and supervisors for each service. ERE percentages were calculated based on the expected level of ERE as a percentage of direct staff and supervisor salaries and wages. ERE is calculated as the product of the calculated direct staff and supervisor salaries and wages described above, and an ERE percentage, which varies by provider group and includes the following:

- Employer entity's portion of payroll taxes, employee medical and other insurance benefits.
- Employer portion of retirement expenses incurred on behalf of direct care staff and supervisors.
- All other taxable fringe benefits consistent with IRS Publication 15-B rules, such as club memberships.

For purposes of developing the ERE assumptions, the employer-related payroll taxes were based on federal and state-specific requirements. For example, the IRS specifies amounts for items such as Federal Insurance Contributions Act (FICA), Federal Unemployment Tax Act (FUTA), where the State specifies amounts related to State Unemployment Insurance Act (SUI).

A significant portion of the ERE assumption is driven by the cost of health insurance and retirement benefits the employer provides to its employees. Retirement costs were sourced from BLS data for the health care and social assistance civilian worker classification.

Figure 11 provides a summary of the employee-related assumptions and their related sources. Insurance and retirement costs were sourced from BLS data for the health care and social assistance civilian worker classification.

FIGURE 11: EMPLOYEE RELATED EXPENSE ASSUMPTIONS

COMPONENTS	ASSUMPTIONS FOR SFY 2026	SOURCE
Employee Social Security Withholding	6.20% of up to wage base limit of \$176,100	IRS Publication 15 2025 Employer's Tax Guide (page 2)
Employer Medicare Withholding	1.45%	IRS Publication 15 2025 Employer's Tax Guide (page 2)
FUTA Tax	\$420, 6.00% of first \$7,000	IRS Publication 15 2025 Employer's Tax Guide (page 43)
SUI Tax	\$545	Based on stakeholder workgroup feedback
Workers Compensation	1.18% calculated as a percentage of the sum of Wage and Salaries and Paid Leave components per December 2024 national data.	U.S. Bureau of Labor Statistics. (December 2024). Economic News Release, Table 1. Employer Costs for Employee Compensation by Ownership for Civilian Workers (page 4)
Insurance Benefits	\$7,989 per year (\$3.55 base hourly cost for the health care and social assistance industry group multiplied by 2,080 hours, trended from December 2024 to April 2026).	U.S. Bureau of Labor Statistics. (December 2024). Economic News Release, Table 2. Employer Costs for Employee Compensation by Ownership for Civilian Workers (page 5)
Retirement Percent	4.70% calculated as a percentage of the sum of Wage and Salaries and Paid Leave components per "Health care and social assistance" for civilian workers industry group.	U.S. Bureau of Labor Statistics. (December 2024). Economic News Release, Table 2. Employer Costs for Employee Compensation by Ownership for Civilian Workers (page 5)

Notes:

1. The sources in the table above were examined as of June 1, 2025. To the extent the sources are materially restated or updated, the assumptions in this table may be inappropriate.
2. Insurance benefits are illustrated for all provider modifiers, excluding the Less Than Bachelor's HM provider group modifier. Further insurance benefit expenses for the HM provider modifier are described in more detail below.
3. The detailed calculations related to the ERE percentage are shown by provider group in Appendix 4.

Review of the Provider Survey results for Direct Care and Supervisory Staff data suggested that employer entities' costs to provide health insurance for the Less Than Bachelor's HM provider group modifier are significantly lower compared to other provider modifiers. Therefore, at MDHHS' direction, a separate buildup was developed to model health insurance costs for the HM provider group modifier.

The health insurance cost assumption for the Less Than Bachelor's HM provider group modifier was developed using the monthly premiums for expanded bronze individual plans across Michigan on the Health Insurance Marketplace.

Monthly premium costs by county were weighted by population and the assumption of \$374.00 per month was developed by taking a weighted average of the premium costs for individuals aged 30 and 40. This premium amount was then multiplied by a take-up percentage of 64% (which comprises the average take-up rate for all non-HM provider groups). The Less Than Bachelor's HM modifier provider group take-up rate was 32% and based on discussions with MDHHS, we assumed a higher take-up rate value to promote providers offering health insurance benefits to their direct care staff. This leads to \$239.36 in employer entity health insurance costs per employee per month for the Less Than Bachelor's HM provider group modifier using the December 10, 2024 data. This amount was then trended to the midpoint of SFY 2026 using the 2025 Milliman Medical Index of 6.1%.

These assumptions are meant to reflect actual coverage rates for behavioral health providers and will be adjusted over time based on the available data from future Provider Surveys. The detailed calculations related to the ERE percentage are shown by provider group in Appendix 6.

3.3.3 Transportation expenses

The transportation expense component of the IRM approach is intended to capture the provider entities' out-of-pocket transportation costs. This expense is captured two different ways, depending on the service. For some services, where the employee may travel to an individual's location to provide the service or between locations of individuals receiving services, the transportation expense is assumed to be the reimbursement paid to the employee for use of their own vehicle. For other services, particularly for residential settings where providers may maintain and operate a van or other vehicle for transporting individuals for service-related purposes, this expense is included through an estimate of the cost of operating and maintaining such a vehicle.

1. Expenses related to employee mileage reimbursement

For services that assume reimbursement paid to the employee for use of their own vehicle, the related transportation expenses are based on the assumed average number of miles required to provide a service on a per unit basis. The expenses are calculated by applying the estimated number of miles by the 2025 federal mileage reimbursement allowance of \$0.70 per mile. This excludes the wages paid to direct staff and supervisors for their transportation time – this wage expense is included in the direct staff salaries and wages component described previously. The IRM approach also assumes that the federal mileage reimbursement would be sufficient to cover the cost of a provider owned vehicle if the provider opts to rely on the use of a provider vehicle instead of paying mileage reimbursement.

As described in Figure 7, the rate models assume that average transportation time per trip is 40 minutes in a frontier area, 20 minutes in rural area, and 20 minutes in an urban area. The model also assumes that the average driving speed is 50 miles per hour (MPH) in a frontier area, 40 MPH in a rural area, and 30 MPH in an urban area. The assumed miles driven is calculated by multiplying the average land speed by the transportation time in terms of hours. For example, the assumed miles driven per one-way trip in a frontier area is 33.3 miles. These assumptions are not based on actual rigorous data analysis, but rather estimates that have been shared with stakeholders for feedback. The calculation for assumed miles and MPH is included in Figure 12.

FIGURE 12 – MINUTES, MILES PER HOUR, AND MILES PER ONE-WAY TRIP

	PERCENTAGE OF TOTAL POPULATION*	ONE-WAY TRIP MINUTES	ESTIMATED AVERAGE MPH	MILES PER ONE-WAY TRIP
Frontier	4.8%	40	50	33.3
Rural	19.8%	20	40	13.3
Urban	75.4%	20	30	10.0
Statewide	100.0%	21	33	11.6

*Frontier includes any counties with population density below 40 people per square mile, Rural includes any counties with population density between 40 and 200 people per square mile. Urban includes any counties with population density of more than 200 people per square mile.

Figure 13 shows the build-up of the vehicle-related costs per unit for the H2015 example.

FIGURE 13 – VEHICLE-RELATED COSTS PER UNIT - H2015 HIGH RATE

A	Estimated Average MPH	33.00
B	Average Minutes of Transportation Time Per Unit	2.08
C = A * B / 60	Estimated Miles Driven Per Unit	1.15
D	Federal Reimbursement Rate	\$ 0.70
F = C * D	Vehicle-Related Costs Per Unit	\$ 0.80

Transportation expenses are spread across all billable units of a claim in the same way that the transportation time is incorporated into the rate models.

2. Expenses related to operating and maintaining a van

For some services, such as those provided in licensed residential settings, it is reasonable to assume providers operate and maintain a van or other vehicle dedicated to transporting individuals for service-related purposes. For these services, we developed an annual estimate of the costs associated with operating and maintaining a dedicated van and then converted that cost into an estimate of the vehicle cost per unit of service. When estimating the annual vehicle costs, we considered costs necessary to maintain and operate a van, including financing, insurance and registration, fuel, routine maintenance (oil, brakes, tires, batteries, filters, etc.), as well as the incremental cost associated with a disability lift. The final assumed annual cost of operating and maintaining a van with a disability lift is approximately \$11,091. The services which are assumed to utilize a van are the Model 3 services (H0010, H0012, H0019, H2016+T1020, and H2030).

3.3.4 Administration / program support / overhead

An adjustment to account for the cost of administration, program support, and overhead of the provider is built into each of the rate models. Consistent with the SFY 2025 comparison rates, this adjustment was developed at the procedure code level based on the results collected from the Provider Survey. This component is intended to account for the following types of costs:

1. Program support costs

Some services, like Medication Assisted Treatment (MAT), would require the administration of certain drugs in the normal course of treatment. For these services, adjustments have been applied to the relevant rate models to recognize these types of unique costs. Program support costs for other services, such as for licensed residential services, would also include supplies, materials and equipment necessary to support service delivery, including wheelchairs or gurneys, and the costs associated with community activities provided as part of the individual plan of service.

2. Administration and overhead expenses

Generally, expenses related to administration and overhead would include all expenses incurred by the provider entity necessary to support the provision of services but not directly related to providing services to individuals, and may include, but not be limited to:

- Salaries and wages, and related employee benefits for employees or contractors that are not direct service workers or first- and second- line supervisors of direct service workers
- Liability and other insurance
- Licenses and taxes
- Legal and audit fees
- Accounting and payroll services
- Billing and collection services
- Bank service charges and fees
- Information technology
- Telephone and other communication expenses
- Office and other supplies
- Postage
- Accreditation expenses, dues, memberships, and subscriptions
- Meeting and administrative travel related expenses
- Training and employee development expenses, including related travel
- Human resources, including background checks
- Community education
- Marketing/advertising
- Interest expense and financing fees
- Facility and equipment expense for space not used to directly provide services to individuals, and related utilities
- Vehicle and other transportation expenses not related to transporting individuals receiving services or transporting employees to provide services to individuals
- Board of director-related expenses
- Interpreter services

Administrative and program support adjustments were calculated from the provider survey data collected for each provider with over \$5M in behavioral health expenditures. For SFY 2026, administrative and program support experience was collected from SFY 2023 and SFY 2024 provider survey data to smooth the year-over-year administrative and program support adjustment. The adjustment was calculated by dividing the administrative costs by the overall costs as reported in the Provider Survey. Each administrative and program support adjustment has been calculated based upon the line of business as reported within the Provider Survey and reflects the calculated median values.

See Figure 14 for the administrative and program support adjustment selection by line of business from experience reported in SFY 2023, SFY 2024, and the blended average utilized for the SFY 2026 comparison rate development. Appendix 7 provides the mapping from line of business to the service category and procedure code level.

FIGURE 14 – ADMINISTRATIVE AND PROGRAM SUPPORT ADJUSTMENTS BY LINE OF BUSINESS

LINE OF BUSINESS	ADMINISTRATIVE/ PROGRAM SUPPORT ADJUSTMENT		
	SFY 2023	SFY 2024	2-YEAR AVERAGE
Support Services	15.6%	16.5%	16.1%
Other Services	21.7%	19.2%	20.4%
Licensed Residential Per Diem	12.1%	15.7%	13.9%
MH / SUD (Residential) / Detox Per Diem	27.1%	25.5%	26.3%
MH and SUD Services (Clinical)	23.0%	25.0%	24.0%
ABA Services	23.7%	17.7%	20.7%

3.3.5 Other service-specific adjustments

For residential services, we have incorporated a caseload efficiency factor, which adjusts for situations such as bed vacancies or instances where service caseloads can vary from those included in the IRM assumptions.

When used, the caseload efficiency factor is applied after determining the sum of the service specific wages expense, ERE expense, and transportation expenses, to “gross up” the expenses to be spread across the expected number of service units to be ultimately provided.

3.3.6 Rate range assumptions

For SFY 2026, the rate range was developed for certain services administered by less than bachelor’s provider group (provider modifier HM). For SFY 2026, MDHHS is limiting the rate range methodology change to the services listed in Figure 1, as they represent significant expenditures in the BH program and the contracted rates for these services can vary based on a number of variables including travel time and vehicle allowance, insurance benefits, time off allowances, and others.

The high rate range was developed using the methodology described in the remainder of Section 3 Methodology. MDHHS selected the low rate range by reducing certain assumptions that apply to less than bachelor’s provider group based on their understanding of provider contracts. Figure 15 below provides a description of the adjustments made to assumptions that apply to less than bachelor’s provider group to develop the low comparison rates.

FIGURE 15: SUMMARY OF ASSUMPTION CHANGES RELATED TO LESS THAN BACHELOR’S LOW RATE ASSUMPTIONS

SUB-ELEMENT	LOW RATE RANGE ASSUMPTION CHANGES
Direct Care Staff Indirect Time	<ul style="list-style-type: none"> Indirect time is removed for all services, except for H2014.
Direct Care Staff Transportation Time and Expense	<ul style="list-style-type: none"> Transportation time is removed for all services, except for H2014.
PTO Adjustment Factor	<ul style="list-style-type: none"> Holidays and paid time off are reduced to a total of 15 days as illustrated on the “HM-low” row of Appendix 4.
ERE Factor	<ul style="list-style-type: none"> Insurance benefits are removed from ERE assumptions as illustrated on the “HM-low” row of Appendix 6.

3.4 RATE MODEL TYPES

There are three main model types that reflect the rate model components described above:

- Model 1:** Per Unit Rate Model – Used when the direct care service time assumptions related to providing the service can be reasonably determined on a per unit basis.
- Model 2:** Case Load Rate Model – Used when the expected costs of services are more reasonably determined on a monthly basis, with resulting accumulated monthly expenses converted to a service unit value based on assumptions related to the average number of individuals served and/or units provided during the month.

- **Model 3: 24/7 Shift-Based Rate Model** – Used for services where more than one individual is served, typically in a residential setting, where direct care staff are expected to be on-site for scheduled periods or shifts, set up to provide service coverage over an extended period of time, or on a 24/7 basis

The intent of each model is to capture the average expenses that the provider is expected to experience delivering each service over a period of time.

Figure 16 shows the rate model types chosen for each procedure code. Figure 17 provides an overview of the different model types. An example rate model for each of these model types is provided in Appendix 8.

FIGURE 16: SERVICES BY MODEL TYPE

MODEL TYPE	SERVICES
1.1.1	0362T, 0373T, 90791, 90832, 90834, 90837, 90846, 90847, 90849, 90853, 97151, 97153, 97154, 97155, 97156, 97157, 97158, 99211, G2077, G2078, H0001, H0002, H0020, H0031, H0032, H0036, H0038, H0045, H2019, H2023, H2033, S5110, S5111, S5116, S5150, S5151, T1001, T1002
1.1.2	H0043, H2014, H2015, T1005, T2026, T2027
1.2	96372
1.3	90792, 99205, 99213, 99214, 99215, G2076
2	H0039
3	H0010, H0012, H0019, H2016+T1020, H2030

FIGURE 17: RATE MODEL TYPES

MODEL	OVERALL DESCRIPTION	MODEL TYPES	ADDITIONAL CONSIDERATIONS
Type 1 Per Unit Rate Model	<ul style="list-style-type: none"> • Used when the direct care service time assumptions related to providing the service can be reasonably determined on a per unit basis. • Assumes that all team members incur time when a unit of service is provided, with supervision as necessary. • The final rate per unit reflects the adjusted total minutes multiplied by the hourly labor-related cost components, and then adding all other applicable rate components. 	<ul style="list-style-type: none"> • Model 1.1: One direct care staff person is expected to provide the service with the presence of a direct care staff supervisor. • Model 1.2: One or two direct care staff providing the service, without expected direct care staff supervision. • Model 1.3: Team staffing approach is needed for the service, typically representing a multi-disciplinary team, when the direct care team members' time is expected to be used and can be determined on a per unit basis. 	<ul style="list-style-type: none"> • Model 1.1.2 is materially consistent with Model 1.1 but reflects the comparison rate development for services with low and high rate ranges. • On-call stipends • Non-payroll transportation expenses <p><i>Note:</i> The administration/program support/overhead component is included in the final rate per unit by taking the total cost of all prior components divided by one minus the administration/program support/overhead percentage amount</p>
Type 2 Case Load Rate Model	<ul style="list-style-type: none"> • Used when the expected costs of services are more reasonably determined on a monthly basis, with resulting accumulated monthly expenses converted to a service unit value based on assumptions related to the average number of individuals served and/or units provided during the month. 	<ul style="list-style-type: none"> • Only one model type. • Reflects a team approach to services. While not all team members are expected to contribute to the delivery of every unit of service, the staffing resources assumed for this model are expected to represent the average per unit resources over the course of a month. 	<ul style="list-style-type: none"> • Does not separately distinguish direct time from indirect or transportation time. • Does not separately apply a PTO adjustment, assuming that the average monthly direct care staff time and expected number of units, which are based on caseload assumptions, already take into account the PTO-reduced capacity of the direct care staff. • Adjusted monthly service time components <ul style="list-style-type: none"> ◦ Direct care staff time per month ◦ Supervisor time per month • Caseload assumptions <ul style="list-style-type: none"> ◦ Average units per individual per month ◦ Add-on cost components per unit • Transportation expenses • Per unit conversion factor (if applicable)

MODEL	OVERALL DESCRIPTION	MODEL TYPES	ADDITIONAL CONSIDERATIONS
Type 3 24/7 Shift- Based Rate Model	<ul style="list-style-type: none"> Used for services where more than one individual is served, typically in a residential setting, where direct care staff are expected to be on-site for scheduled periods or shifts, set up to provide service coverage over an extended period of time, or on a 24/7 basis. 	<ul style="list-style-type: none"> Only one model type Considers the number of direct care staff required for each shift each day, including separate staffing patterns for weekday periods and weekends. 	<ul style="list-style-type: none"> Since the direct care staff delivering these services commonly earn time and a half pay by working overtime or holiday hours, assumptions for a reasonable percentage of hours paid at a time and a half pay rate are incorporated (see earlier discussion in <i>Section 3.3.1</i>). Accounting for time and a half pay, separate weekly wages expenses and ERE expenses are calculated for each type of direct care staff (i.e., provider group) delivering the service. These values are then converted to an average daily expense amount per individual served. Adjusted weekly service time components <ul style="list-style-type: none"> Direct care staff time and supervisor staff time per week Paid time off adjustment factor Add-on cost components per unit <ul style="list-style-type: none"> Transportation expenses Caseload efficiency Program support costs, administration, and overhead

4. SFY 2025 Code Sets and Provider Qualifications

The SFY 2025 code sets reflect the culmination of discussions, including but not limited to CMHSP and PIHP site visits, SME discussions, MDHHS and Milliman discussions, data collection exercises, and additional analysis regarding best practices. The *SFY 2025 Behavioral Health Code Charts and Provider Qualifications* document found on the MDHHS website provides SFY 2025 procedure codes, qualifying provider types and the corresponding provider group modifiers, and other modifiers anticipated to impact rates.¹¹ The comparison rates developed in this document do not include MDHHS program modifiers (e.g., Women's Program) that are also required in SFY 2025, as these modifiers are not anticipated to impact the per unit rates being paid to providers. The remainder of this section documents the modifiers or groups of modifiers that have been included in the SFY 2025 code sets that are anticipated to impact provider rates.

4.1 PROVIDER GROUP MODIFIER

Section 3.2 Provider Groups includes a description of provider group modifiers, and Appendix 3 provides a listing of all provider types along with their corresponding provider group modifier. MDHHS anticipated requiring provider group modifiers on all encounters for all non-team-based services beginning in SFY 2025 with exceptions for the following services:

- **Select supports services** – H0043, H2015, T2026, T2027, H2014, H2016, S5150, S5151, G2078, H0010, H0012, H0019, H0039, H0045, H2030 were identified by workgroups as not requiring a provider group modifier because the rate paid to providers to render these services does not vary by provider group (i.e., providers with a bachelor's degree or higher get paid the same as providers without a bachelor's degree).
- **ACT** – MDHHS is requesting to include the provider group modifier on all encounters for this team-based service to better monitor who on the ACT team is providing the face-to-face contact.

4.2 GROUP SIZE MODIFIER

Historically, MDHHS has required providers to use the TT modifier to document services where direct care staff provided a service to a group of individuals. Beginning in SFY 2022, MDHHS requires providers to use the following group size modifiers to support the ability of rates to reflect differences in costs based on the number of patients served:

- **UN** – Two patients served
- **UP** – Three patients served
- **UQ** – Four patients served
- **UR** – Five patients served
- **US** – Six or more patients served

Comparison rates were developed for services that could vary by group size based on modifier. The indirect time assumption for each group size modifier is calculated from the indirect time for the service code without group size modifier and multiplied by the number of patients served as indicated by the group size modifier. For example, code H0036 (community psychiatric supportive treatment) is developed assuming direct time of 15 minutes and indirect time of 25 minutes when billed without any group size modifier. When the UN modifier is used, the direct time is still 15 minutes but the indirect time is assumed to be 50 minutes, assuming that each person in the group requires 25 minutes of indirect time. When the US modifier is used, the group size is set at 6 for all services.

¹¹ Michigan Department of Health and Human Services. (April 4, 2024). *Mental Health & Substance Use Disorder Reporting Requirements*. Retrieved from: https://www.michigan.gov/mdhhs/0,5885,7-339-71550_2941_38765---,00.html

The remaining assumptions are consistent across all group size modifiers, however, the final unit cost is divided by the number of patients served since providers will bill separately for each individual in the group. When the US modifier is used, the group size is set at 6.

4.3 RESIDENTIAL TIER MODIFIER

The costs of residential services can vary materially based on the needs of the individual. Michigan's Medicaid behavioral health program includes two different residential services requiring tiered rates – SUD residential services and licensed residential services for individuals with Serious Mental Illness (SMI) and/or developmental disabilities. MDHHS has created a SME workgroup to develop rate tiers for licensed residential services provided by Michigan's Medicaid program and these rates are not included within this report. SUD residential services follow the residential (level 3) tiers developed by the American Society of Addiction Medicine (ASAM) and include the following modifiers:

- **W1** – Clinically Managed Low-Intensity Residential Services, adolescent and adult level of care (ASAM 3.1)
- **W3** – Clinically Managed Population-Specific High-Intensity Residential Services, adult only level of care modifier used with H0019 with ASAM Level 3.3
- **W5** – Clinically Managed Medium-Intensity Residential Services for adolescents and Clinically Managed High-Intensity Residential Services for adults' intermediate level of care (ASAM 3.5)
- **W7** – Medically Monitored High-Intensity Inpatient Services for adolescents and Medically Monitored Intensive Inpatient Services Withdrawal Management for adults, Complex/high tech level of care (ASAM 3.7)

4.4 EVIDENCE-BASED PRACTICES MODIFIER

MDHHS has invested significant resources over many years to develop and promote EBPs, and recognizes that providers delivering services following EBPs require training, consultation, and additional supervision that exceeds what is required under typical service delivery approaches. Based on discussions with the IRM workgroup, we have categorized each EBP into either a Tier 1 EBP or Tier 2 EBP. Tier 1 EBP services assume 1 additional week of training and/or consultation over what is required for non-EBP services. Tier 2 assumes 2.5 additional weeks of training and/or consultation time. The tiers of each of EBP modifier/code can be found below, along with the EBP modifiers/codes.

- **Modifiers**
 - **ST (Tier 1)** – Related to Trauma or Injury
 - **Y1 (Tier 1)** – Prolonged Exposure Therapy (PET)
 - **Y2 (Tier 2)** – Dialectical Behavior Therapy (DBT)
 - **Y3 (Tier 2)** – Parent Management Training Oregon Model
 - **Y4 (Tier 1)** – Substance Abuse and Mental Health Services Administration (SAMHSA)- approved EBP for co-occurring disorders
 - **Y5 (Tier 1)** – Individual placement support
- **Code-specific**
 - **H2010 (Tier 1)** – [Not a Comparison Rates Service] Medication Algorithm
 - **S5110 (Tier 1)** – Family Psycho-Education: Skills Workshop
 - **G0177 (Tier 1)** – [Not a Comparison Rates Service] Family Psycho-Education: Family Educational Groups (either single or multi-family)
 - **T1015 (Tier 1)** – [Not a Comparison Rates Service] Family Psycho-Education: Joining
 - **H2019 (Tier 2)** – DBT
 - **H2033 (Tier 2)** – Multi-Systemic Therapy (MST)

Consistent with SFY 2025, we have assumed the supervisory assumption for all EBP services to follow a 1:8 supervisor ratio, meaning each supervisor is assumed to oversee eight direct-staff employees.

5. Limitations and Data Reliance

The information contained in this letter, including its appendices, has been prepared for The Michigan Department of Health and Human Services (MDHHS). To the extent that the information contained in this letter is provided to third parties, the letter should be distributed in its entirety. Any user of the data must possess a certain level of expertise in actuarial science and healthcare modeling so as not to misinterpret the data presented.

The contents of this report are not intended to represent a legal or professional opinion or interpretation on any matters. Milliman makes no representations or warranties regarding the contents of this report to third parties. Similarly, third parties are instructed that they are to place no reliance upon this information prepared for MDHHS by Milliman that would result in the creation of any duty or liability under any theory of law by Milliman or its employees to third parties.

Milliman has developed certain models to estimate the values included in this report. The intent of the models was to develop comparison rates using an independent rate model approach. We have reviewed the models, including their inputs, calculations, and outputs for consistency, reasonableness, and appropriateness to the intended purposes and in compliance with generally accepted actuarial practice and relevant actuarial standards of practice (ASOP). The information in this report relied extensively on data provided by MDHHS and stakeholders, and national data sources. We have not audited or verified this data and other information. If the underlying data or information is inaccurate or incomplete, the results of our analysis may likewise be inaccurate or incomplete. We performed a limited review of the data used directly in our analysis for reasonableness and consistency and have not found material defects in the data. If there are material defects in the data, it is possible that they would be uncovered by a detailed, systematic review and comparison of the data to search for data values that are questionable or for relationships that are materially inconsistent. Such a review was beyond the scope of our assignment.

Comparison rates are developed using an independent rate model, which calculates rates based on the sum of independently determined rate inputs and components. Inputs are based on estimated resources required to provide the service. It is certain that actual individual provider cost experience will not conform exactly to the assumptions used to develop these comparison rates. Actual amounts will differ from projected amounts to the extent that actual experience deviates from expected experience.

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. The responsible actuary for this report is Jeremy Cunningham, a member of the American Academy of Actuaries who meets the qualification standards for performing the analysis contained in this report.
