

3

OBJECTIVE THREE

Increase the proportion of females and males ages 13-17 years who have completed the HPV vaccine series.

Data Target

Increase HPV vaccine series completion from 43.6% to 80.0%.

Strategies

- Community-based interventions implemented in combination, involving partnerships between community organizations, local government, and vaccination providers to implement and coordinate the following: one or more interventions to increase community demand (client reminder and recall systems, manual outreach and tracking, client or community-wide education, client incentives, client-held paper immunization records, and case management), and one or more interventions to enhance access to vaccination services (expanded access in healthcare and dental settings, home visits, and reduced client out-of-pocket costs).
- Health care system-based interventions implemented in combination, including: at least one intervention to increase client demand for vaccinations (e.g., client reminder and recall systems, clinic-based client education, manual outreach and tracking), and one or more interventions that address either (or both) of the following: interventions to enhance access to vaccinations (expanded access in health care settings, reduced client out of pocket costs, and home visits), or interventions directed at vaccination providers or systems (e.g., provider education, provider reminders, standing orders, provider assessment and feedback).
- Provider assessment and feedback which involves retrospectively evaluating the performance of providers in delivering one or more vaccinations to a client population and providing feedback on their performance. Assessment and feedback can also involve other activities (e.g., incentives or benchmarking).
