

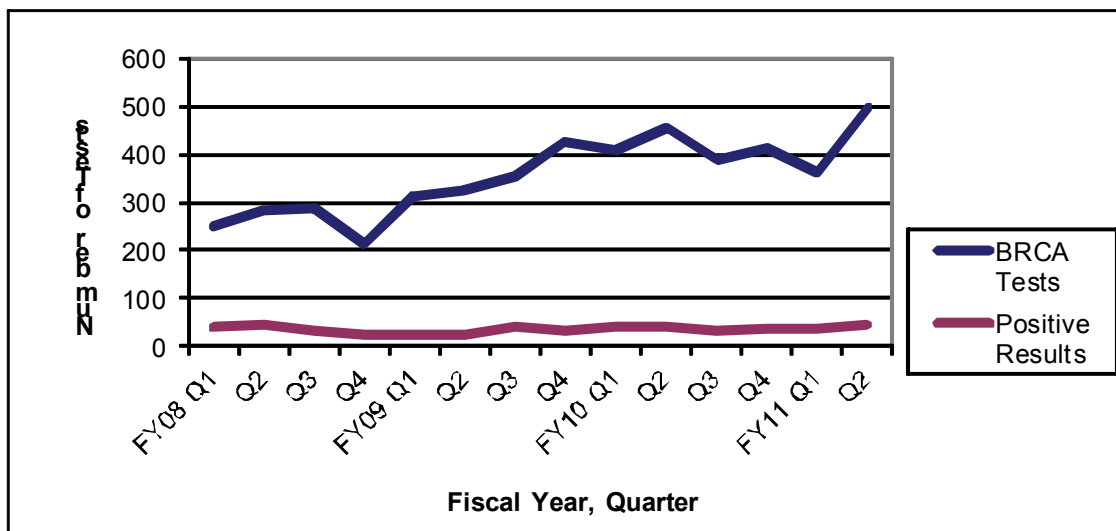

Figure 3. Number of BRCA tests per fiscal year quarter, October 2007–March 2011

These data represent *BRCA* tests ordered in conjunction with a visit to a board-certified genetics provider in Michigan from October 2007–March 2011.

While the number of tests ordered appears to be increasing during this time period, the number of tests with positive (deleterious) results remained relatively constant (Figure 3). Site specific tests for known familial mutations remained steady over time and closely mirrored the number of positive results (data not shown).

These data include genetic counseling visits from October 1, 2007 – March 31, 2011. Special thanks to the following institutions whose de-identified patient information was included in these analyses: Beaumont Health System Cancer Genetics Program, Henry Ford Health System, InformedDNA, Karmanos Cancer Institute Genetics Service, Michigan State University Division of Clinical Genetics, Oakwood Healthcare System’s Genetic Risk Assessment for Cancer Clinic, Providence Hospital Medical Genetics, Spectrum Health Cancer Genetics Program, University of Michigan Cancer Genetics Clinic, and University of Michigan Breast and Ovarian Cancer Risk and Evaluation Program.
