

# Ending HIV Together

## Priority Population: Adults Age 20-35

Michigan's Equitable Plan has an ambitious goal of **reducing new HIV infections by 90% by 2030**. To meet this goal and improve health care for all people, health care systems need to address disparities by prioritizing disproportionately impacted groups, such as adults age 20–35.

**People age 20 to 35 had a new HIV diagnosis rate of three times the state average from 2021 - 2023.** This disproportionate impact is driven by structural failings in our health systems that make it difficult for this age group to access and navigate care.

Rate of New HIV Diagnosis per 100,000 People, 2021-2023

### Goal One: Increase HIV Testing

**17,216**

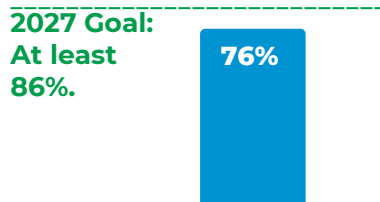

The state tested 17,216 people age 20 to 35 for HIV in 2022. This represented **58% of all 2022 tests funded by the state.**

**How does Michigan's Equitable Plan seek to achieve these goals and reduce disparities for people age 20 to 35?**

### Goal Two: Improve Retention in Care

Michigan has **further to go** to ensure people age 20 to 35 with HIV achieve the 2027 goal compared to other residents.

Percentage of People Age 20-35 with HIV Currently in Care, 2022

**Partnering with health centers and community organizations** to increase testing opportunities for adults age 20-35.

**Provide a variety of services** to people with HIV who may be uninsured or underinsured such as medication access, case management and support with housing, transportation and food.

**Tailored trainings** to providers such as special considerations for PrEP navigation and prescribing for adults age 20-35.

### Goal Three: Increase PrEP Referrals

While similar to the statewide average, **fewer than half** of eligible people age 20 to 35 received a pre-exposure prophylaxis (PrEP) referral.

Percentage of Eligible People Age 20-35 Who Received a PrEP Referral, 2022
