

Ending HIV Together

Priority Population: Black/African Americans

Michigan's Equitable Plan has an ambitious goal of **reducing new HIV infections by 90% by 2030**. To meet this goal and improve health care for all people, health care systems need to address disparities while also prioritizing disproportionately impacted groups, such as Black/African American residents.

Black/African Americans had a new HIV diagnosis rate of four times the state average from 2021 - 2023. This disproportionate impact is driven by current and historical racism and failings in our health systems.

Rate of New HIV Diagnosis per 100,000 People, 2021-2023

Goal One: Increase HIV Testing

14,158

The state tested 14,158 Black/African Americans for HIV in 2022. This **represented 47.7% of all 2022 tests funded by the state.**

How does Michigan's Equitable Plan seek to achieve these goals and reduce disparities for Black/African Americans?

Supporting the Pull Up Project, a mobile health initiative to increase access to health and wellbeing services by reducing barriers for people impacted by or at a greater likelihood of acquiring HIV in Detroit.

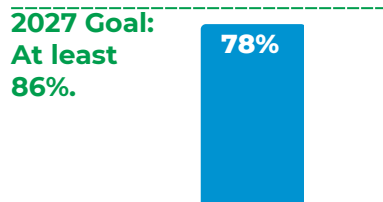

Providing resources such as testing, HIV case management and linkage to care services customized for communities of color.

Promoting the Mahogany Blue campaign to empower Black/African American women to take control of their sexual health and protect themselves, including accessing PrEP.

Goal Two: Improve Retention in Care

Michigan has **further to go** to ensure Black/African Americans with HIV achieve the 2027 goal compared to other residents.

Percentage of Black/African Americans with HIV Currently in Care, 2022

Goal Three: Increase PrEP Referrals

While similar to the statewide average, **fewer than half** of eligible Black/African Americans received a pre-exposure prophylaxis (PrEP) referral.

Percentage of Eligible Black/African Americans Who Received a PrEP Referral, 2022
