

Perinatal Infection Screening Flow Chart

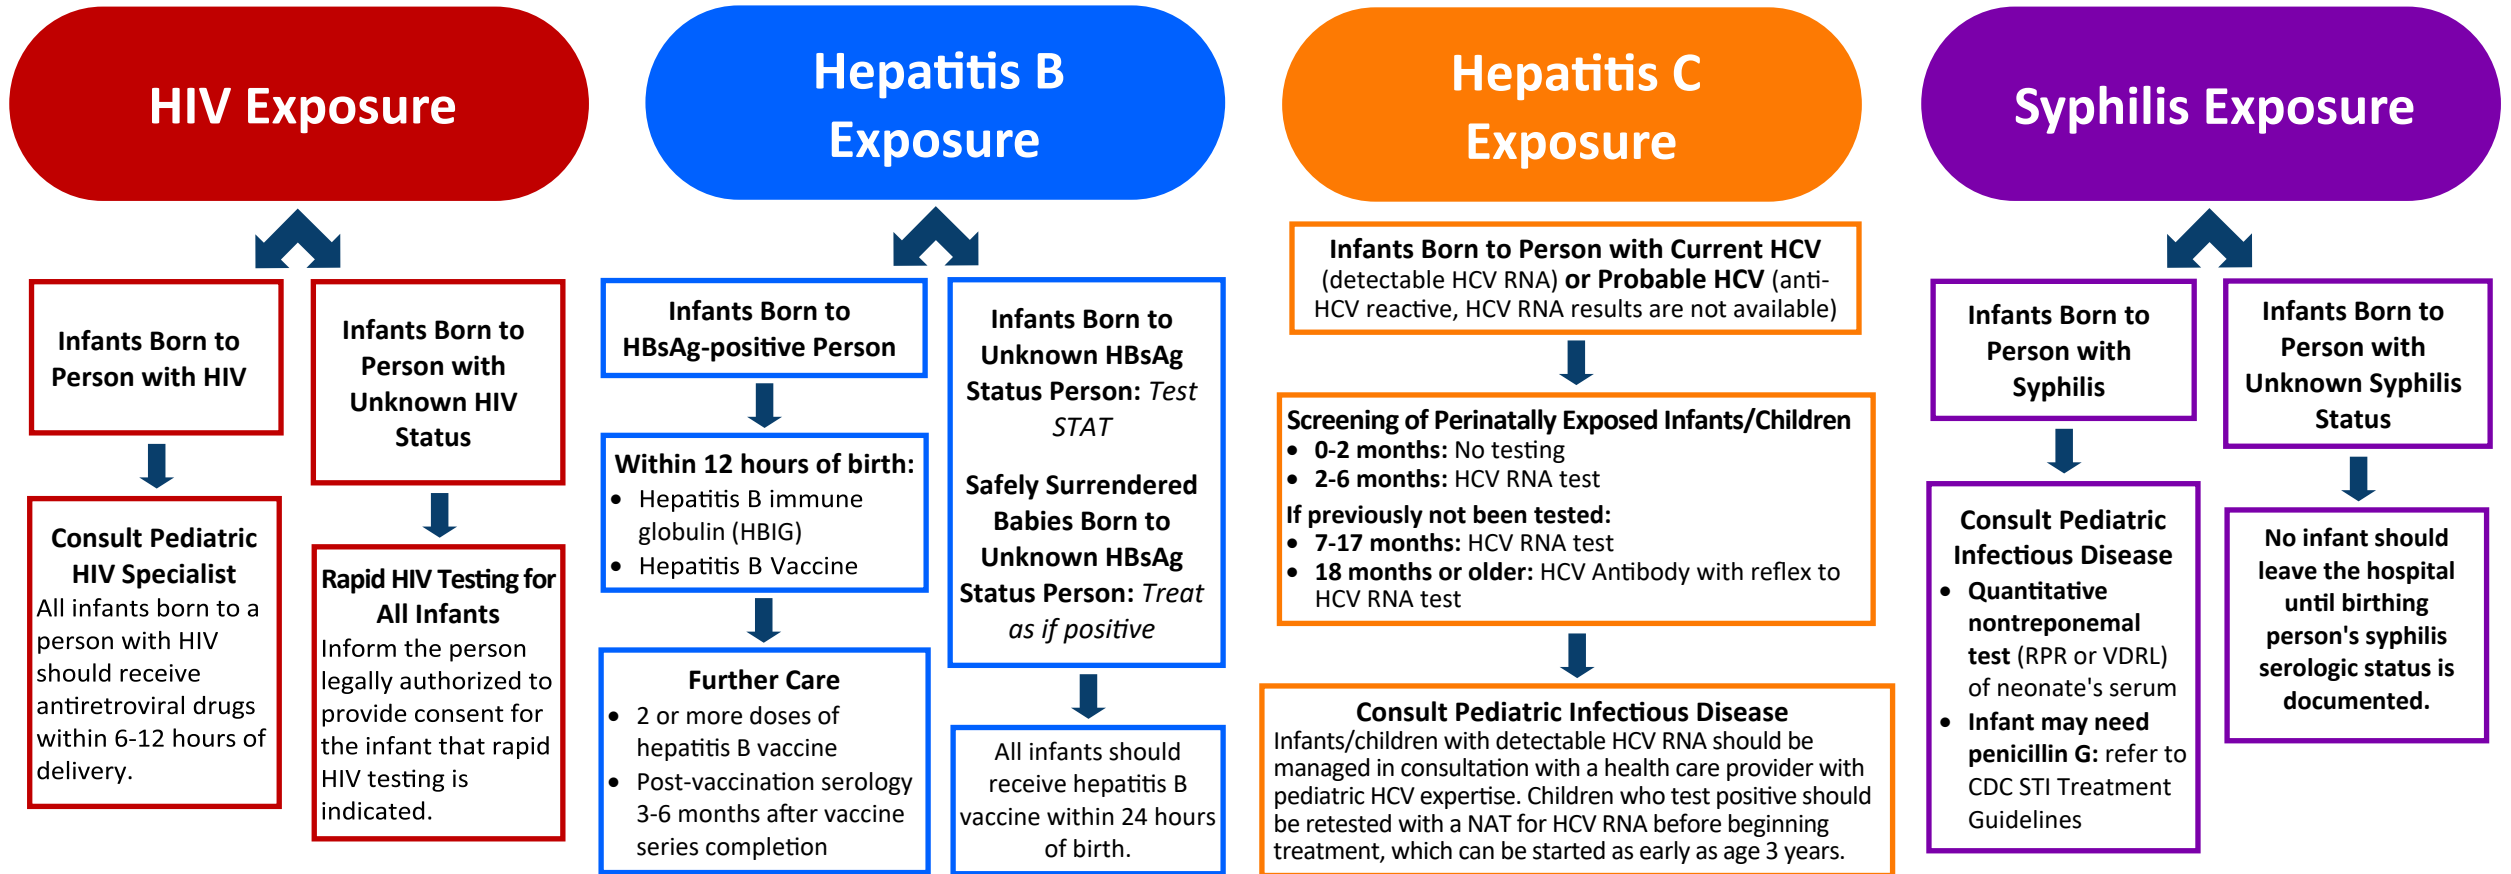

Additional Points

- All positive tests for HIV, hepatitis B, hepatitis C, and syphilis require prompt consultation with adult infectious disease, pediatric infectious disease, and experienced perinatal providers.
- Any positive HIV, hepatitis B, hepatitis C, and syphilis test must be confirmed.
- All birthing people who have signs or symptoms of acute HIV infection should additionally be tested with a plasma HIV RNA (viral load). Consult Infectious Disease.
- All birthing people who are HCV Ab positive should be tested with HCV RNA.
- Patients can consent to an HIV test verbally or in writing. Providers must document the refusal and the reason for the refusal if a test is offered and declined.
- Hospitals must have procedures in place to report confirmatory HIV test results to the patient.
- A pediatric HIV specialist should be notified about any HIV-positive birthing person's treatment history and viral load so that a care plan can be initiated prior to delivery.

Reporting

- Any positive HIV, hepatitis B, hepatitis C, or syphilis test must be reported to the local health department in the county where the birthing person resides.
 - Michigan Adult HIV Confidential Case Report Form: <https://bit.ly/3tctE9A>
 - Michigan Pediatric HIV Confidential Case Report Form: <https://bit.ly/3NR816U>
- People who test positive for HIV, hepatitis B, hepatitis C, and/or syphilis must be reported within 24 hours, of diagnosis or discovery, to the local health department in the county of which the patient resides. (Per section 333.5111 of Michigan's Public Health Code, Act No. 368 of the Public Acts of 1978, as amended). **Please also call MDHHS at 313-456-1586 to report cases.**
