

Michigan Title X Family Planning Annual Report (FPAR) Data Summary: 2022

How many clients were seen?

The total client population of Michigan's Title X Family Planning Clinics decreased from 2010-2021, with large decreases in 2020 and 2021. The lower numbers in 2020 and 2021 were due to a large family planning provider leaving the Title X Program in those years. In 2022, the overall client population increased greatly, but is still lower than the overall client population observed in 2019 (Figure 1).

Who made up the client population?

Within the Michigan Title X Family Planning network, the overall female client population decreased each year from 2010-2021. In 2022, the number of female clients increased substantially, likely due to a large family planning provider rejoining the Title X Program. Conversely, the number of male clients steadily increased each year from 2010-2018 and decreased dramatically in 2020 and 2021. In 2022, the number of male clients increased once again (Figure 2).

Demographic Summary, 2022:

- 47.2% of males and 46.0% of females were between 20-30 years of age (Figure 3).
- 30.5% of clients were teenagers (Figure 3).
- 45.1% of clients were at or below 100% of the United States Department of Health and Human Services federal poverty level (Figure 4).
- 39.7% of clients were publicly insured, and 28.6% were uninsured (Figure 5).
- 50.1% of males and 55.0% of females were non-Hispanic white (Figure 6).

What method of contraception did clients rely on?

Female Contraceptive Data:

- In 2022, the most common type of contraceptive utilized by female clients include: (Figure 7).
 - Oral contraceptives (24.0%)
 - Three-month hormonal injections (21.7%)
 - Long-acting reversible contraceptives (18.0%) (LARC)*

*LARC include intrauterine devices and hormonal implants.

- 68.2% of female clients relied on most or moderately effective forms of contraceptives (Figure 7).**

**Most or moderately effective methods include: female sterilization, IUD, hormonal implants, three-month hormonal injection, oral contraceptives, contraceptive patches, vaginal rings, cervical cap/diaphragms and vasectomy
