

MICHIGAN CARBON MONOXIDE POISONING HOSPITALIZATIONS

Publication Date: 2/7/2020

Abstract

This dataset contains inpatient hospitalization records for Michigan residents admitted with a primary (first-listed), other, or E-code diagnosis of accidental or unknown carbon monoxide (CO) poisoning (2001-2014 using ICD9-CM 986; E868.2, E868.3, E868.8, E868.9, E982.0, or E982.1; 2016 and forward using ICD10-CM T58.01*, T58.04*, T58.11*, T58.14*, T58.2X1*, T58.2X4*, T58.8X1*, T58.8X4*, T58.91*, and T58.94*). Intentional or purposeful CO poisoning records (ICD9-CM E950.0-E979.9, E990.0-E999; ICD10-CM T58.02*, T58.03*, T58.12*, T58.13*, T58.2X2*, T58.2X3*, T58.8X2*, T58.8X3*, T58.92*, or T58.93*) were excluded. The data are aggregated and stratified by state of residence, admission year, and fire-relatedness (whether or not the CO poisoning was caused by a fire).

All users are recommended to read and fully comprehend the metadata prior to data use. To access these data, please visit the [MiTracking data portal](#).

Purpose

This dataset provides data for both the National Environmental Public Health Tracking Network and the Michigan Environmental Public Health Tracking Network. It is intended to provide public health professionals, researchers, and the general public with summary information on CO poisoning hospitalization in the State of Michigan. The data include CO poisoning hospitalization measures for:

- (1) the number of hospitalizations for CO poisoning,
- (2) the crude rate of CO poisoning hospitalization per 10,000 population, and
- (3) the age-adjusted rate of CO poisoning hospitalization per 10,000 population.

Supplemental Information

These hospitalization data are provided by the Michigan Health and Hospital Association (MHA) to the Michigan Department of Health and Human Services (MDHHS) through a contractual agreement. MHA annually collects data for the Michigan Inpatient Database (MIDB) from patient discharge records supplied by all Michigan acute care hospitals and hospitals in contiguous areas of Ohio, Indiana, Wisconsin, and from several other states where Michigan residents were admitted. Data on Michigan residents who were in another state were included.

Hospitals included in the data file are grouped into MHA hospital IDs. Discharge records from Michigan hospitals include both Michigan residents and non-Michigan residents whereas records from out-of-state hospitals only include Michigan resident discharges.

Data provided by the hospitals were carefully checked and edited by MHA to ensure the validity of the data received. The data were further reviewed and verified by staff in the MDHHS Division of Vital Records and Health Statistics (DVRHS) using multiple sources including previous MIDB files and Michigan driver license files.

Hospitals do not report patient's county of residence. Thus, both MHA and DVRHS derived codes for county of residence from the patient's reported zip code. Because some zip codes fall into two or more counties, "weights" were applied. The weights were created by using the percentage that a zip code fell under each county. When a zip code intersects more than one county, MHA used only the largest weight while DVRHS took into account all the weights. For example, for 100 records, if zip code "X" intersects counties A (weight = 60%) and B (weight = 40%), MHA would assign all 100 records to county A whereas DVRHS would randomly select 60 records for county A and 40 records for county B. The county field generated by DVRHS was used for this dataset.

Using the subsequent year's discharge-based dataset, the Michigan Tracking Program created an admission-based hospitalization dataset for all admissions in a year. Data for non-Michigan residents and for hospitalizations from federal facilities (such as Veterans Affairs or Indian Health Service hospitals) were excluded.

Race and ethnicity are not reported in this dataset due to issues with the quality of the data collection process at individual hospitals. Data have been de-identified to protect patient confidentiality.

Keywords

Carbon monoxide; carbon monoxide poisoning; unintentional poisoning; indoor pollution; toxic gas; combustion; smoke; CO; Monoxide; Carbon monoxide hospitalizations; Carbon monoxide hospital admissions

Other Information on Data

Level of Geographic Detail: State

Currentness Reference (when data were last updated): 9/30/2019

Frequency at which the data are updated: Annually

Data Status: Complete

Completeness Report

These data are based only on discharge diagnosis codes (ICD9-CM) 986; E868.2, E868.3, E868.8, E868.9, E982.0, or E982.1 or (ICD10-CM) T58.01*, T58.04*, T58.11*, T58.14*, T58.2X1*, T58.2X4*, T58.8X1*, T58.8X4*, T58.91*, and T58.94*. Intentional or purposeful CO poisoning records (ICD9-CM E950.0-E979.9, E990.0-E999; ICD10-CM T58.02*, T58.03*, T58.12*, T58.13*, T58.2X2*, T58.2X3*, T58.8X2*, T58.8X3*, T58.92*, or T58.93*) were excluded. Prior to October 1, 2015, diagnosis codes were represented by ICD-9-CM codes. As of October 1, 2015, diagnosis codes are represented by ICD-10-CM codes.

As a direct result of this change, there are nearly five times as many diagnosis codes in ICD-10-CM than in ICD-9-CM, allowing further expansion than was possible with ICD-9-CM. This coding change impacts information classifications for hospital discharge, emergency department, and outpatient records for administrative and financial transactions in all healthcare settings.

Since the coding change took effect on October 1, 2015, this means that the first three quarters of data year 2015 are coded in ICD-9-CM, and the last quarter of 2015 is coded in ICD-10-CM. Because of this coding change, hospitalizations on the MiTracking portal are separated into two indicators (2001-2014 and 2016-present). Data from 2015 are not presented.

- Hospitalizations before 2015 are not directly comparable to hospitalizations for 2016 or later.
- Differences between counts and rates in years prior to 2015 compared with years after 2015 could be a result of this coding change and not an actual difference in the number of events.
- This means that 2015 cannot be compared to any other year and, for some measures, is not reliable on its own

These data include inpatient hospitalizations of Michigan residents discharged from non-federal acute care hospitals by admission year. The data do not include hospitalizations from Veteran Affairs, Indian Health Service, or other federal facilities or hospitals.

Race and ethnicity are not reported in the dataset due to issues with the quality of the data collection process at individual hospitals.

The data are based on number of hospitalization events, and therefore no attempt has been made to remove duplicate records resulting from a repeat visit for the same event or a transfer between acute care hospitals; thus, duplicate records may exist for a single hospitalization event.

Data Processing Description

The dataset was processed and created using data from the Michigan Resident Inpatient Files, created using data from the Michigan Inpatient Database (MIDB) obtained with permission from the Michigan Health and Hospitalization Association Service Corporation (MHASC). The dataset was prepared using the instructions found in the Centers for Disease Control and Prevention (CDC) Standards for Nationally Consistent Data and Measures within the Environmental Public Health Tracking Network, version 3.0, pg. 71-73 (http://ephtracking.cdc.gov/docs/CDC_NCDM_v3.pdf). MIDB data is an inpatient discharge-based dataset but an admission-based dataset for hospitalizations was created using the year of interest and the subsequent year of data.

- All hospital admissions for one year with diagnosis of CO poisoning were included in the new dataset which was cleaned and processed using SAS 9.3/9.4 to exclude non-Michigan residents and recode values of the state field to a 2-digit code (Michigan is code 26).
- Cause of CO poisoning was established as fire-related, non-fire related, or unknown mechanism or intent based on the assigned ICD9-CM diagnosis code.
- Transfers between acute care hospitals were not excluded from the data.
- Counts of inpatient hospitalizations for CO poisoning were aggregated by admission year, state, and fire-relatedness.
- Rates were calculated using vintage bridged-race population estimates available through the National Vital Statistics System (NVSS) for years in between each census (e.g. 2001-2009) and U.S. census bureau population data for census year 2010.

Access Constraints

There are no access constraints for data available through the Michigan Environmental Public Health Tracking program public portal. Where applicable, restricted data will only be released to users after a written request detailing the purpose of the request, intended use for the data, and specifics on the security and privacy measures to be taken to safeguard patient privacy and prevent unauthorized access to or use of the data. Such requests are reviewed and approved by MHASC. The Michigan Tracking Program will review each request to certify that the purposes described are reasonably calculated to promote public health or promote the efficient, effective delivery of healthcare in Michigan before forwarding the request to the DVRHS for review and further consideration. Please contact the Michigan Tracking Program for more information.

Use Constraints

It is recommended that all users read and fully comprehend the metadata prior to data use. Efforts have been made to ensure the accuracy of the data. These data are supplied by MHA to MDHHS for submission to the National Environmental Public Health Tracking Network. The data are also being used to establish a Michigan Tracking Network to compile, integrate, and disseminate environmental hazard, exposure, and health effects data pursuant to criteria and requirements set forth by the CDC. MHA and MDHHS specifically disclaim responsibility for any analyses, interpretations, or conclusions made by those who access this information.

These data remain the property of the MHA and cannot be used for commercial purposes and shall not be used to engage in any method, act, or practice which constitutes the solicitation or advertisement of goods, services, or real estate to Michigan consumers.

Data users are prohibited from attempting to learn the identity of any person included in the data and from linking these data with any other data for the purpose of matching records to identify individuals or entities (such as hospitals).

Usage rights: Portions of this data are taken from a proprietary database owned and maintained by the Michigan Health & Hospital Association Service Corporation (MHASC). All rights reserved. This data may not be used for commercial purposes without first obtaining written permission from the MHASC. Contact MHASC at datakoala@mha.org for more information.

Data Limitations

Hospitalization data, by definition, do not include CO poisoning among individuals who do not receive medical care or who are not hospitalized, including those who die in emergency rooms, in nursing homes, or at home without being admitted to a hospital, and those treated in outpatient settings.

Differences in rates over time or by area may reflect differences or changes in diagnostic techniques and criteria and in the coding of CO poisoning. Note: The US transitioned from ICD-9-CM to ICD-10-CM for coding conditions at hospitals on October 1, 2015. Differences in results before 2015, and after 2015 could be due to this particular coding change and not an actual difference in the number of events.

Reporting rates at the state and/or county level will not show the true CO poisoning burden at a more local level (e.g., neighborhood).

Reporting rates at the state and/or county level will not be geographically resolved enough to be linked with many types of environmental data.

Differences in rates by area may be due to different socio-demographic characteristics and associated behaviors. When comparing rates across geographic areas, a variety of non-environmental factors, such as access to medical care, can impact the likelihood of persons being hospitalized for CO poisoning.

Data Suppression

The Michigan Environmental Public Health Tracking Program and its data partners have applied appropriate cell suppression rules imposed by the data providers and/or using guidance from the CDC. Even at the county level it can be expected that the measures generated will often be based upon numbers too small to report or present without violating state and federal privacy guidelines and regulations.

Staff have adhered to the cell suppression rules by suppressing all counts greater than 0 and less than 6 (the corresponding rates based on these small counts have also been suppressed). Complementary suppression has also been completed to prevent any back calculation of suppressed cells. For some data, it was necessary to increase cell sizes by combining data across time (e.g., years) and geographic areas (statewide instead of county-level data).

Security Handling Description

If data are distributed, the use constraints specified in this metadata apply to all recipients of the data.

Distribution Liability

The Michigan Public Health Tracking Network is maintained, managed, and operated by the Environmental Health Bureau (EHB) within MDHHS. In preparation of these data, every effort has been made to offer the most current, correct, complete, and clearly expressed information possible. Nevertheless, some errors in the data may exist. In particular, but without limiting anything here, MDHHS disclaims any responsibility for source data, compilation and typographical errors and accuracy of the information that may be contained in these data.

These data do not represent the official legal version of source documents or data used to compile these data. MDHHS further reserves the right to make changes to these data at any time without notice.

It is strongly recommended that careful attention be paid to the contents of the metadata file associated with these data to evaluate dataset limitations, restrictions, or intended uses. MDHHS shall not be held liable for improper or incorrect use of the data described and/or contained herein.

MDHHS makes no warranties or representations whatsoever regarding the quality, content, condition, functionality, performance, completeness, accuracy, compilation, fitness, or adequacy of the data. By using the data, you assume all risk associated with the acquisition, use, management, and disposition of data in your information system, including any risks to your computers, software, or data being damaged by any virus, software, or any other file that might be transmitted or activated during the data exchange of this data.

MDHHS shall not be liable, without limitations, for any direct, indirect, special, incidental, compensatory, or consequential damages, or third-party claims, resulting from the use or misuse of the acquired data, even if MDHHS has been advised of the possibility of such potential damages or loss. Format compatibility is the user's responsibility.

Reference herein to any specific commercial products, processes, services, or standards by trade name, trademark, manufacture, URL, or otherwise, does not necessarily constitute or imply its endorsement, recommendation or favoring by MDHHS. The view and opinions of the metadata compiler expressed herein do not necessarily state or reflect those of MDHHS, or the data owners and shall not be used for advertising or product endorsement purposes.

Use of the data with other data shall not terminate, void, or otherwise contradict this statement of liability.

The sale or resale of the data, or any portions thereof, is prohibited unless with the express written permission of MDHHS and MHASC. Portions of this data are taken from a proprietary database owned and maintained by the MHASC. All rights reserved. These data may not be used for commercial purposes without first obtaining written permission from the MHASC.

If errors or otherwise inappropriate information is brought to our attention, a reasonable effort will be made to fix or remove it. Such concerns should be addressed to the Michigan Tracking Program.

Custom Order Process

For access to national and multi-state unrestricted or public use data, please see:

<http://ephtracking.cdc.gov>

For access to unrestricted or public use Michigan-specific data, please contact the Michigan Health & Hospital Association Service Corporation (MHASC) at datakoala@mha.org for more information.
