

MICHIGAN DEPARTMENT OF TRANSPORTATION

Engineer Development Program (EDP)

The EDP is a rotational program that provides new engineers experience in multiple work areas while being assigned a senior-level mentor. At the conclusion of the EDP, employees

are placed into production roles in alignment with their career interests and the department's needs. Typical assignments during the rotation cycle include road and bridge design, construction, traffic safety, operations, maintenance, geotechnical, materials, and surveys. Additional opportunities in rail, aeronautics, and environmental can be worked into the program with the help of the EDP mentor. It is the intent of the program to develop transportation professionals with a global understanding of MDOT's mission and practice.

- Entry-level transportation engineer position.
- Rotate throughout various assignments up to two years in duration.
- Locations will vary depending on current assignment/rotation.
- Each position will be assigned a mentor.
- Pay: Transportation Engineer 9 pay scale.

Providing the highest quality integrated transportation services for economic benefit and improved quality of life.
