

Together... Better Roads, Cleaner Streams

Written by the MDOT Storm Water Management Team and its consultant, Tetra Tech

July 2006

MDOT's Storm Water Management Team has developed a number of useful educational tools and resources for MDOT employees, local agencies, and contractors, including:

- Best Management Practices (on-line guide)
- SESC Tips Guide, complete with Inspection Checklists (printer-friendly)
- SESC Poster showing Storm Water Best Management Practices (printer-friendly)

All of these materials and more can be found at www.michigan.gov/stormwatermgt - click on "Educational Materials".

In addition, the 2006 edition of the SESC Manual will soon be available for ordering and will also be posted on MDOT's web site. This manual offers more specific guidance on how to prevent sediment laden runoff from construction sites.

To keep the Storm Water Program fresh in your mind, MDOT introduced a Cleaner Streams Mascot, known as "DOT the Drop". You can see DOT in an animated video introducing storm water management practices on the web site. DOT is also featured in training presentations, trade show displays, and various storm water educational materials. Be on the lookout for the blue DOT. Just like MDOT's SWMP, there is no stopping her!

As we are paying closer attention to our storm water management practices, we encourage you to educate yourself and do the same.

Together... Better Roads, Cleaner Streams.
