

MICHIGAN DEPARTMENT OF TRANSPORTATION

2021-2025 FIVE-YEAR TRANSPORTATION PROGRAM

Approved by the State Transportation Commission on January 21, 2021

 **MDOT**

Letter from Director Paul Ajegba

Dear Reader:

I present to you the 2021-2025 Five-Year Transportation Program, a summary of the Michigan Department of Transportation’s (MDOT) stewardship of highway, bridge, public transit, rail, aviation, marine, and nonmotorized programs and resources.

This past year presented many challenges to our great state. The structure of transportation funding in Michigan is built upon the sale of fuel. When the “Stay Home, Stay Safe” executive order was put into place to slow the spread of COVID-19, gas tax receipts were noticeably impacted when traffic volumes dropped by more than 50 percent from February to April. Daily volumes have yet to rebound completely as we continue to find ourselves in the midst of a global pandemic.

This document contains a list of planned highway projects that will utilize all available state and federal revenue for this time period. In addition, this document contains details about the investments being made in the passenger transportation, aviation, and rail programs throughout the state, which are critical to Michigan’s economic health and the provision of a diversity of mobility options statewide. This transportation program represents \$16.4 billion in multi-modal transportation investments, which includes Rebuilding Michigan program bond funds. Gov. Whitmer initiated the bonding proposal to address critical infrastructure needs that otherwise would have taken many years to implement.

In these trying times, MDOT will continue to maintain stewardship of the transportation infrastructure under its care with the resources that are currently available. The Rebuilding Michigan program will help stave off a precipitous decline in pavement condition on our public roadways, but a long-term funding solution is desperately needed. The cost to rehabilitate deteriorating public infrastructure only continues to increase with the passage of time. In addition, future investments in our transportation system will need to take into consideration technological advancements that will likely change our transportation system in many ways.

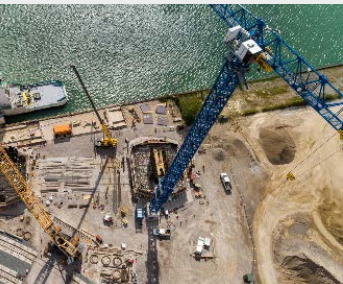

We at MDOT appreciate your interest and participation in the transportation planning process. Please do not hesitate to reach out to our department with any questions or concerns you may have.

Sincerely,

Paul C. Ajegba, P.E.
Director

Introduction

The purpose of the MDOT Five-Year Transportation Program (5YTP) is to present anticipated investments across all modes as early in the planning process as possible, supporting successful program delivery, encouraging local coordination, and guaranteeing opportunities for meaningful public input.

The 5YTP is an important communication and public relations tool for everyone - those within the department, stakeholders, the State Transportation Commission (STC), and the public. It reflects the priorities of the department, identifies funding available, and establishes the timetable for project delivery. It is truly an integral part of this organization and provides the information pipeline for our business from project development through delivery.

This document provides information on planned investments for all components of the transportation network for which MDOT is responsible, including highways, bridges, bus, rail, aviation, marine, and nonmotorized transportation. This document is created in alignment with established State Long-Range Transportation Plan (SLRTP) and STC goals to ensure the preservation of the transportation network to provide a safe and connected system for Michigan's citizens, as required.

Rebuilding Michigan Program

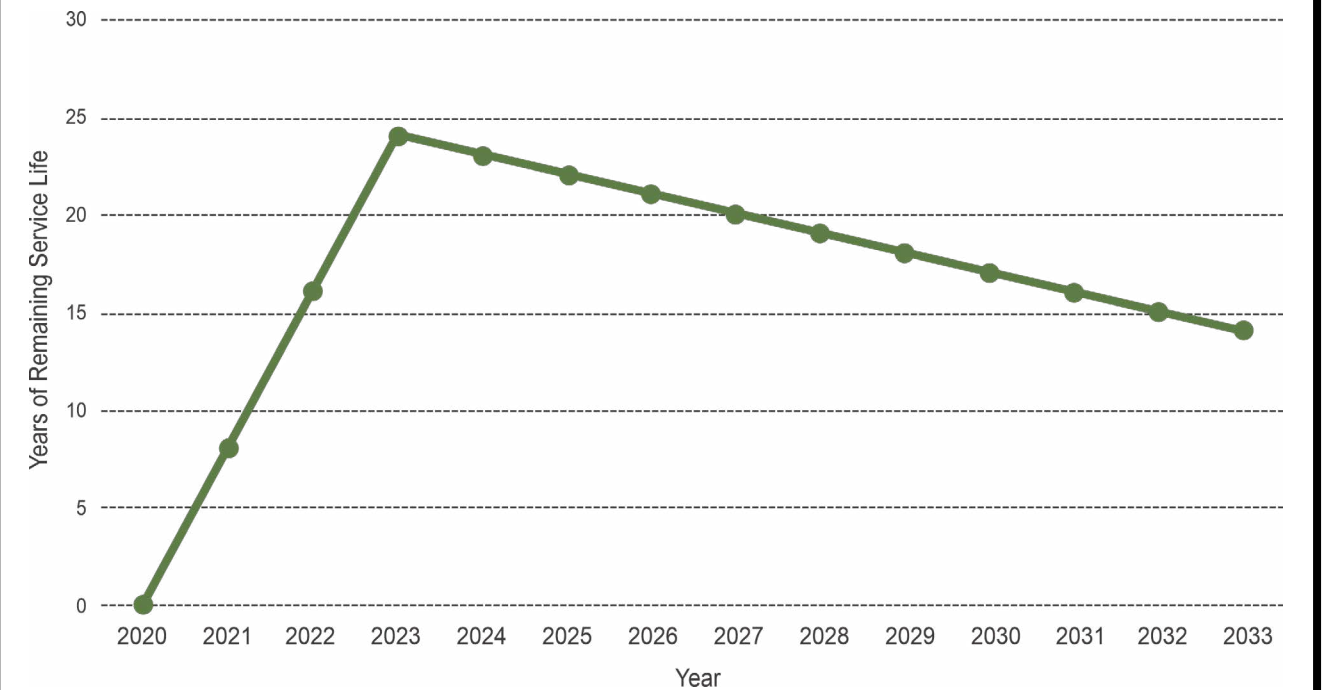

The Rebuilding Michigan program (RBMP) is structured to generate \$3.5 billion in additional financing from the sale of bonds by utilizing the bonding capacity of the State Trunkline Fund. This revenue is not a long-term funding solution or a gas tax increase, but is a financial mechanism being used to advance essential projects that are critical to the state's economy while a long-term solution is being devised.

The projects selected for RBMP financing have been designed to provide a longer pavement life and improve the condition of the state's infrastructure. This will allow MDOT to address key corridors and rebuild major segments of highly travelled interstates, such as I-69, I-75, and I-94, as well as several other busy freeways. Whenever possible, long-term fixes, such as full rebuilding projects, have been programmed on the highest-volume traffic corridors to benefit the most Michigan residents. This approach will allow MDOT to structure the bond payments over the useful life of these major rebuilding and rehabilitation projects. In the project lists at the back of this document, bond projects are highlighted.

The condition of MDOT-managed pavements will significantly improve as a result of this bonded program. The Average remaining service life (RSL) Pavement Condition line graph shows the average years of RSL by year for roads funded with bond proceeds, with an improvement in pavement condition from zero years of RSL in 2020 to a peak of 24 years of RSL in 2023. After that, RSL declines gradually. It should be noted that surface conditions will continue to deteriorate because of normal wear-and-tear.

**Average RSL Pavement Condition
Pavements Improved Through Bonding
2020-2033**

Featured Regional Highway Projects

This section highlights a number of the department’s pavement investment projects from around the state planned to be built during the 2021-2025 timeframe.

Bay Region: Rebuilding I-69 from Fenton Road to M-54 (Dort Highway)

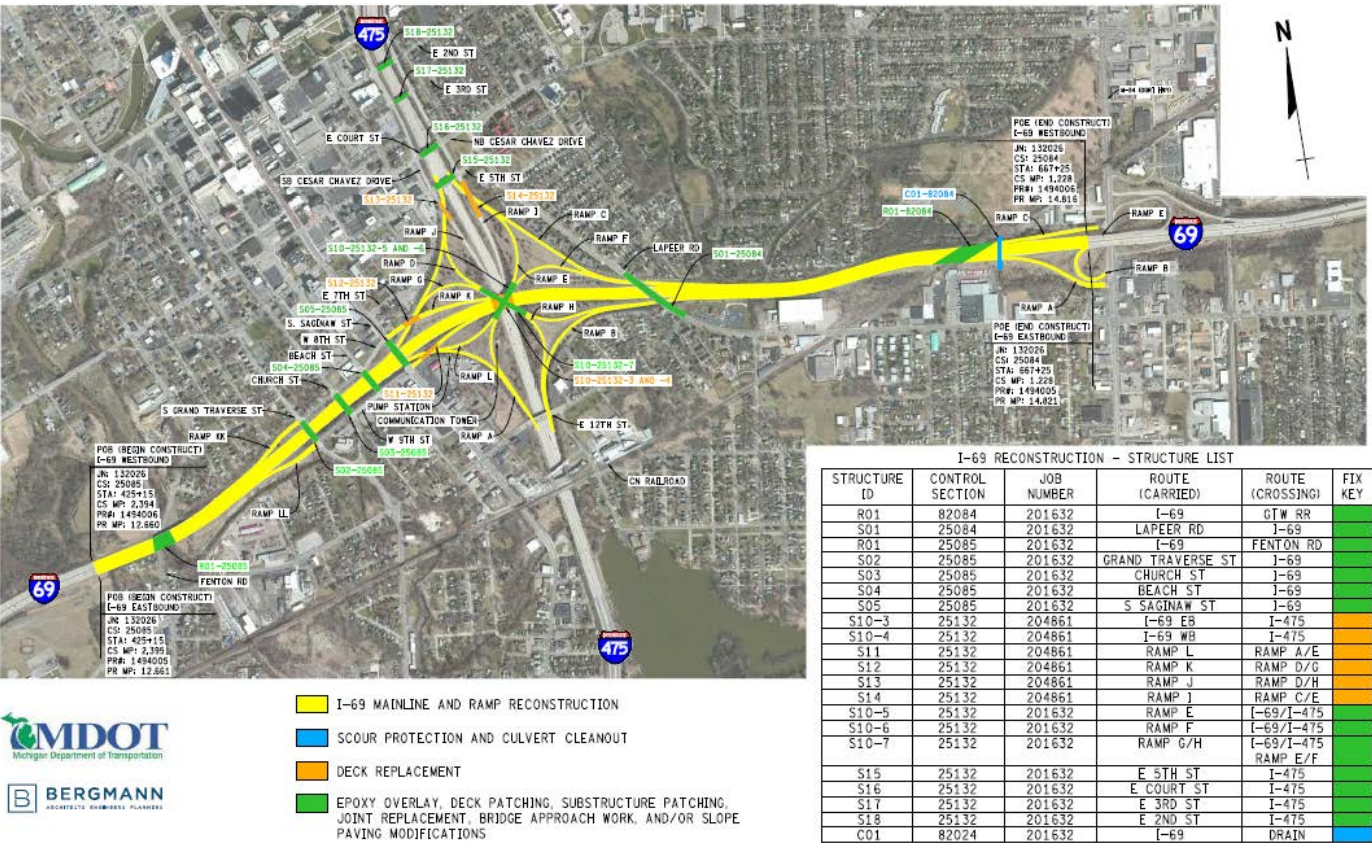

The I-69 rebuilding project from Fenton Road to M-54 (Dort Highway) received RBMP bond financing and was advanced into the 2021 and 2022 construction seasons. The project includes rebuilding mainline I-69, ramps, and I-69/I-475 interchange ramps; rebuilding the adjacent service drives; and replacing decks for six bridges and bridge preservation work on 15 structures.

This project is significant in many ways:

- Initiated with a performance-based practical design feasibility study.

- Last remaining segment for rebuilding between east of I-75 in Genesee County and M-24 in Lapeer County.
- The project runs through downtown Flint and will have an impact on mobility in the area. MDOT is working continuously with the City of Flint to make sure that the project impacts the locals as little as possible.
- This project is the first of three phases that will complete the remaining rebuilding needs of the freeways within Flint. Two projects on I-475 will follow from 2022 to 2025.
- Estimated construction cost is \$74 million.

I-69 Reconstruction • Fenton to Dort Fix Map

Grand Region: I-196 Freeway Corridor Improvements in Allegan, Kent, and Ottawa Counties

The rebuilding of I-96 near I-196, with modifications to the I-96/M-44/M-37 (East Beltline Avenue) interchange, was completed in late 2020.

Continuing in 2021, freeway projects on I-196 in Grand Rapids will include:

- Deck replacement on the bridge carrying eastbound I-196 over the Grand River in downtown Grand Rapids.
- Improvements on the I-196 freeway between Fuller Avenue and Maryland Avenue near the I-96 junction, including:
 - Rebuilding and widening westbound and eastbound I-196 for three lanes of traffic.
 - Rebuilding and widening the I-196 bridges over Plymouth Avenue to accommodate three lanes of traffic in each direction and sidewalks on Plymouth Avenue.
 - Rebuilding and extending the on ramp acceleration lane from Fuller Avenue to eastbound I-196.
- Completing modifications to the eastbound I-196 access to the East Beltline Avenue interchange.

These projects will tie into the previous improvements completed west of Fuller Avenue and will complete most of the original improvements on I-196 from the approved Environmental Assessment (EA). Overall, these improvements are making significant operational and safety enhancements to the freeway system, as well as reducing congestion and improving the reliability of I-196 and I-96 on the east side of Grand Rapids.

After completing I-196 improvements near Holland (westbound from the CSX Railroad to the Allegan/Ottawa county line, and in both directions from the Allegan/Ottawa county line to Byron Road) and east of Hudsonville (32nd Avenue to Kenowa Avenue) in 2020, additional work is planned for I-196 in the Holland area. The following projects are scheduled in 2021.

- Rebuilding westbound I-196 from Saugatuck/ Douglas (130th Avenue) to US-31 in Allegan County near Holland, which is bond-funded. This project also includes Kuipers Drain culvert replacement, deep overlay on the westbound I-196 bridge over northbound US-31 and the westbound I-196 bridge over the Kalamazoo River, and Saugatuck Rest Area improvements.
- Resurfacing and joint repairs on westbound I-196 from US-31 to M-40/CSX Railroad near Holland, including a deep overlay on the westbound I-196 bridge over the CSX Railroad.

In 2022, the connecting US-31 freeway segment from I-196 to Central Avenue, also bond-funded, is being rebuilt, and Central Avenue to 32nd Street (Allegan/Ottawa county line) is being resurfaced.

These projects will compliment eastbound I-196 improvements completed previously. By coordinating the scheduling of the I-196 and US-31 projects, constructability and mobility/traffic control will be enhanced, minimizing impacts on motorists during construction, to the extent possible.

Additional projects totaling \$83.6 million on the I-196 freeway corridor include the following:

- 2022: Deep overlay and scour countermeasures on the eastbound I-196 bridge over the Kalamazoo River in Allegan County.
- 2022: Rebuild I-196 from I-196 Business Loop (BL) (Byron Road) to 32nd Avenue in Ottawa County (bond-funded).
- 2022: Deep overlay on I-196 under M-40 (Lincoln Road) in Allegan County.
- 2023: Replace the eastbound and westbound I-196 bridges over the Grand River and Market Avenue (bond-funded).

Metro Region: I-96 Flex Route and Rebuilding Project

In 2021, the installation of the I-96 Flex Route and rebuilding project from Kent Lake Road to the I-275 interchange (approximately 12 miles) will occur. This project is being bond-funded through the RBMP at a total cost of \$225 million.

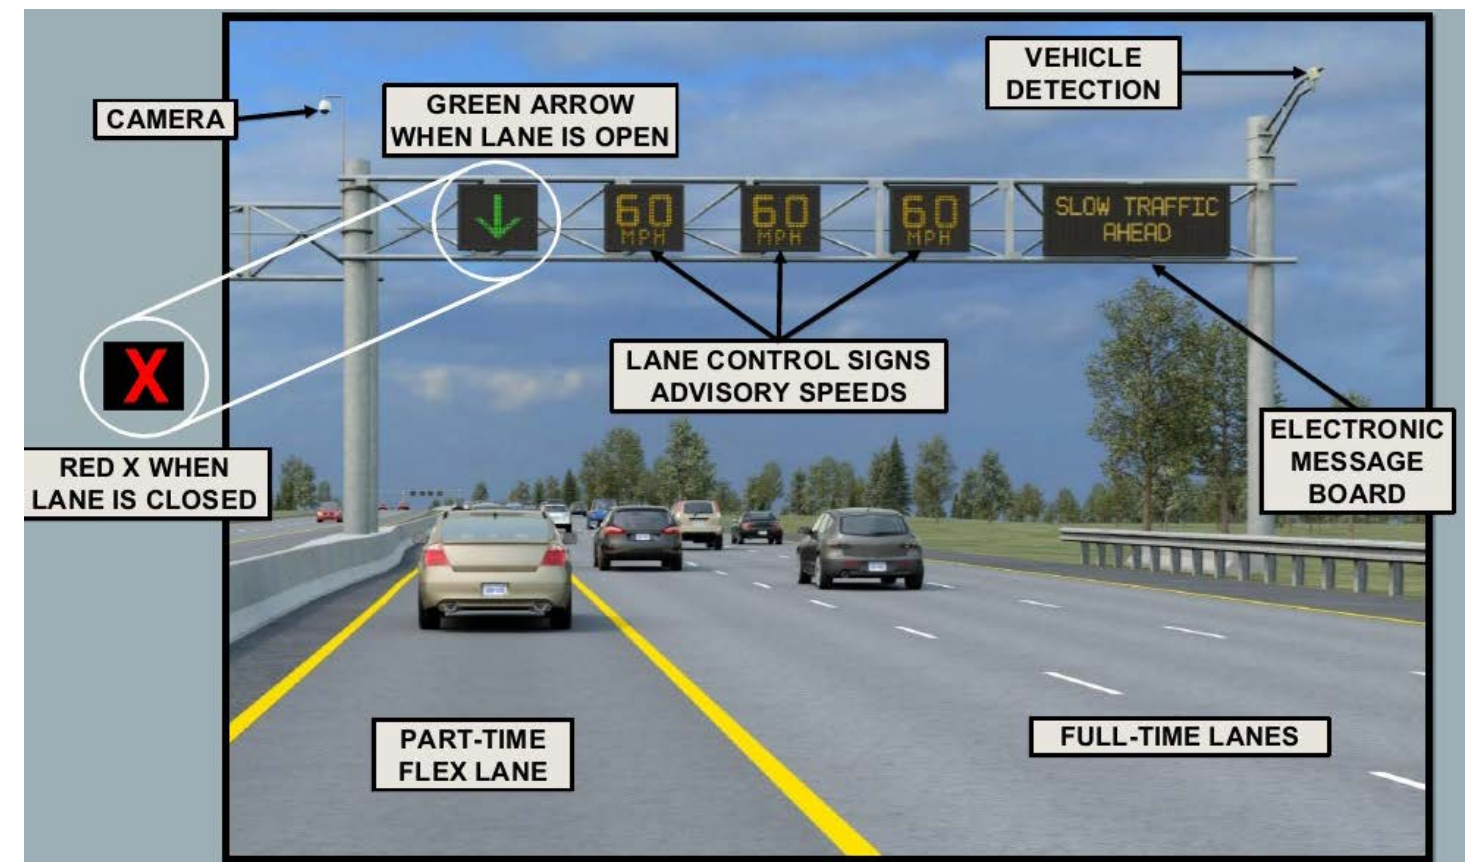

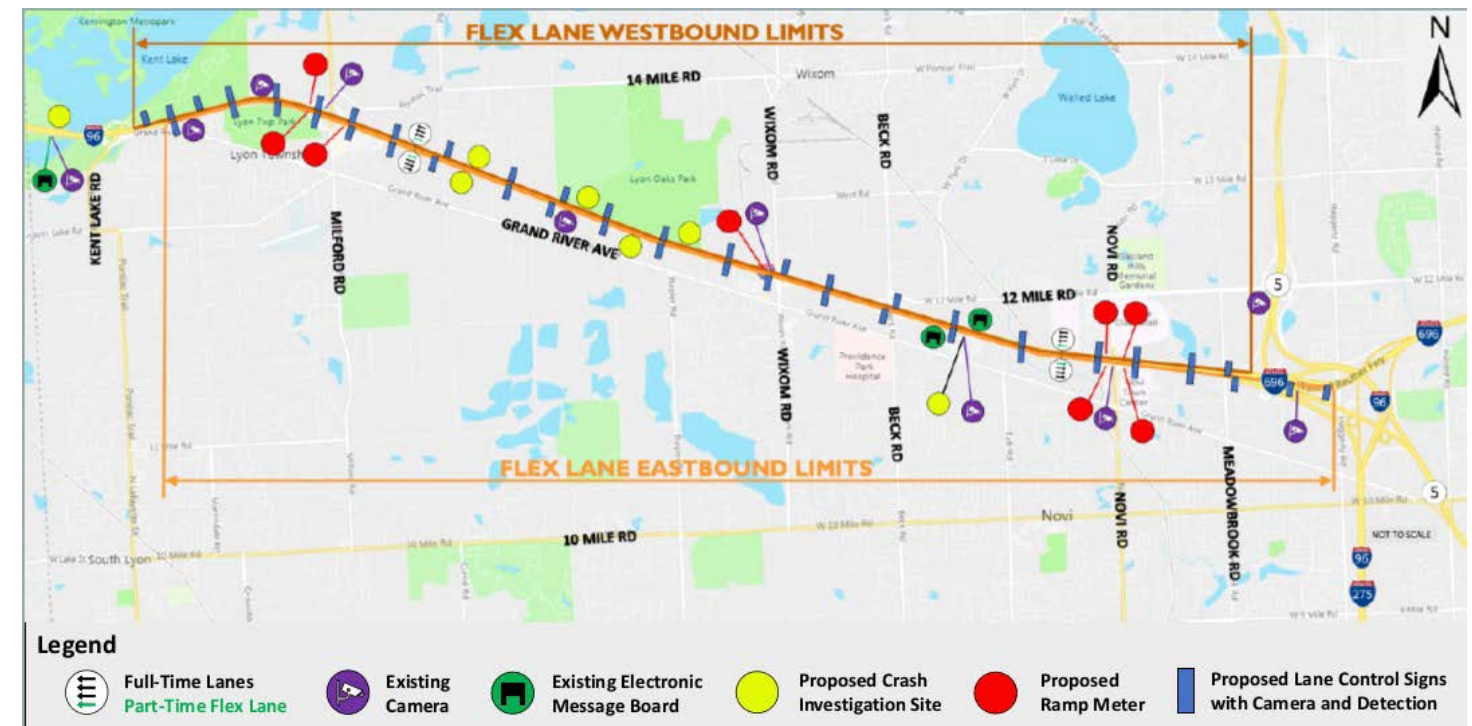

This section of I-96 carries an average annual daily traffic (AADT) of 160,000 vehicles and has a high crash rate, averaging one crash per day (365 crashes per year). In addition, this roadway has very heavy directional reoccurring congestion, unreliable travel times, and frequent stop-and-go traffic.

This project will include:

- Rebuilding I-96 from Kent Lake Road to the I-275 interchange, including the majority of the ramps along the way along with the barrier wall.
- Sewer replacement and ditch clean-out.
- Inside shoulder flex lane, which will be set up for part-time use.
- Ramp meters at eight on ramps along the corridor.
- Pull-off crash investigation sites.
- Lane control signs above each lane for traffic incident management.
- Capital preventive maintenance work on 11 bridges.
- Resurfacing the carpool lot at Beck Road.
- Additional cameras, vehicle detection, and dynamic message signs.
- Freeway signing upgrades.

The anticipated benefits of the project include reduced travel times, more consistent travel time reliability, notification of slowdowns ahead, and a reduction in the crash rate.

North Region: M-37 at Vance Road in Traverse City

In the North Region, three adjacent projects are scheduled along approximately 5 miles of M-37, from M-113 to just south of the M-37/US-31 intersection (Chums Corner) in the Traverse City area. Work is planned for 2021 to rehabilitate the pavement condition and address safety and operational issues.

Items of work include:

- Crushing and shaping.
- Hot-mix asphalt (HMA) paving.
- Drainage improvements.
- Lane widening on some portions from two to three lanes.
- Building new roundabouts at Vance Road and Blair Townhall Road.
- Extending the merge lane south from the US-31 intersection to approximately Vance Road.

These projects will be built together to provide coordination of the work activities and aid in minimizing mobility impacts. The total cost is an estimated \$11.5 million.

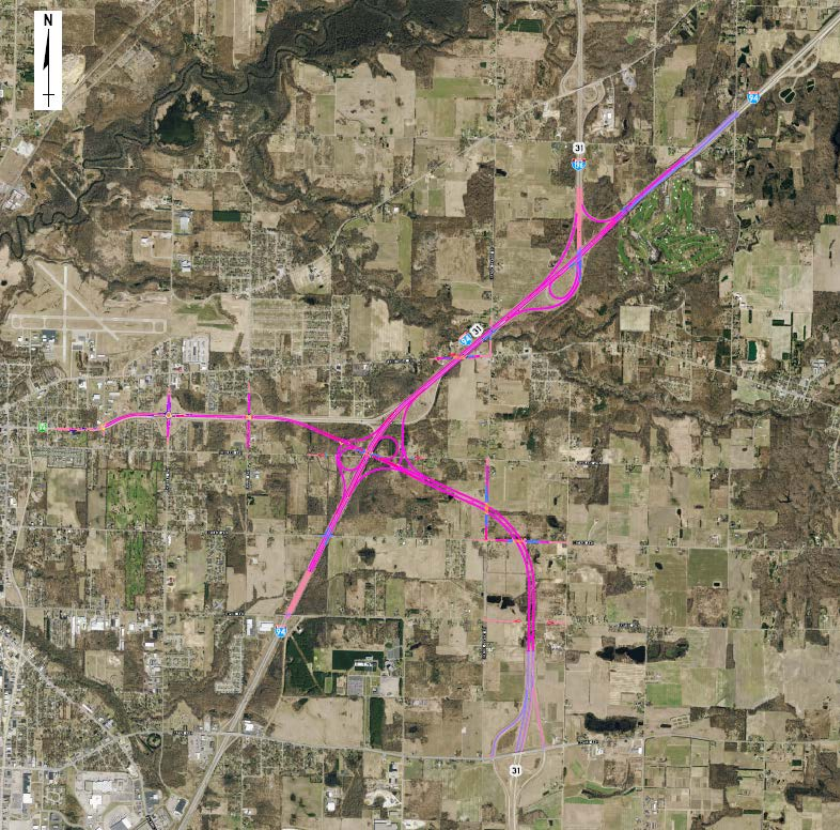

Southwest Region: I-94/I-94 BL/US-31/I-196 Relocation Project

The Southwest Region applied for and received a \$20 million federal Better Utilizing Investments to Leverage Development (BUILD) grant to complete the connection of US-31 from Napier Road to I-94. Since rebuilding I-94 from Britain Avenue to I-196 was already scheduled for 2020, these two projects were packaged together to create economies of scale and to minimize impacts on the traveling public. The project has been designed to improve system connectivity and improve traffic flow along US-31 to I-94 in Berrien County. The project is also being funded by the RBMP and will take two to three construction seasons to fully complete.

The project is in Benton Charter Township, Berrien County, on I-94, I-94 BL, US-31, and I-196, and includes the following major items of work:

- Rebuilding I-94 from south of East Britain Avenue to east of I-196, providing three through-lanes in each direction and an auxiliary lane between US-31 and I-196 for eastbound traffic (approximately 3.5 miles).
- Building the US-31 connection between Napier Avenue and the new interchange at I-94/I-94 BL (approximately 1.8 miles).
- Rebuilding and reconfiguring I-94 BL between west of Urbandale Avenue to the new I-94/US-31 interchange, providing one lane in each direction with a center left-turn lane (approximately 1.9 miles).
- Building new bridges at US-31/I-94 BL over I-94, Benton Center Road over US-31, and Empire Avenue over US-31.
- Rebuilding the Territorial Road bridge over I-94.

Superior Region: Rebuilding US-41, City of Houghton

The rebuilding of US-41 in the city of Houghton begins just east of the MacInnes Drive intersection and runs west to Isle Royal Street. This segment of US-41 (Townsend Avenue) divides the campus of Michigan Technological University (MTU), which has some of the highest pedestrian traffic counts on a state trunkline highway in the Superior Region.

- In addition to replacing a poor pavement, operational and safety improvements are planned and include the following:

 - Converting the current four-lane boulevard configuration on Townsend Avenue to a two-lane boulevard section with designated turn lanes. This will simplify and calm the flow of traffic and make pedestrian crossings safer.
 - Widening the two-lane undivided configuration on College Avenue to a three-lane section with a two-way center left-turn lane. The new configuration has been designed to reduce rear-end left-turn crashes and improve operations by reducing the delay of a vehicle waiting to make a left turn. If a crash does occur, this
- configuration will prevent full traffic stoppages caused by these crashes.

 - Reducing the number of total lanes from three to two for Montezuma Avenue. This change will eliminate a lane change for southbound US-41 traffic and will provide more space for pedestrian facilities.
 - MDOT has partnered with the City of Houghton and MTU to include replacement of water main and sanitary sewer facilities, and to use local roads for one-way trunkline detours to safely maintain traffic during the two construction seasons planned for this project. The City of Houghton will invest about \$2.5 million for the water and sanitary sewer upgrades.

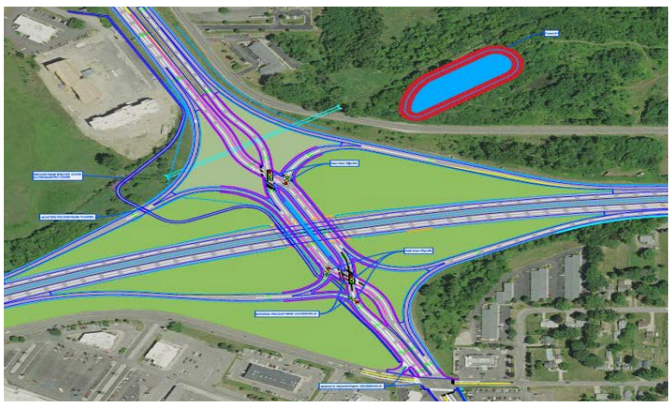

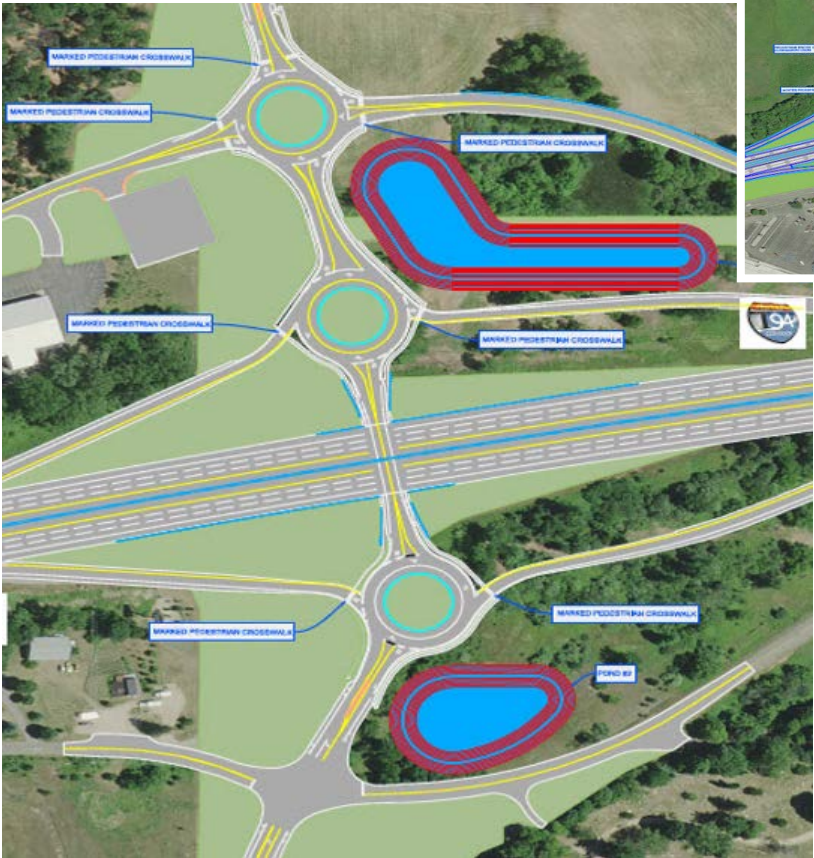

University Region: Rebuilding I-94 Between Airport Road and US-127 South in Jackson County

In 2021, the University Region will begin a multi-year project to rebuild portions of I-94 between Airport Road and US-127 south in Jackson County. This project is the next phase of improvements identified in the I-94 Jackson Freeway Modernization Project study that was finalized in 2007. MDOT anticipates the project will extend over two and a half construction seasons.

- This project consists of rebuilding the I-94/US-127/West Avenue interchange, as well as the Lansing Avenue bridge and the I-94/Elm Road interchange. Once work is complete, I-94 will have at least three lanes in each direction between the US-127/West Avenue north and US-127 south interchanges. The estimated cost is approximately \$100 million.

Project details include:

 - Building a diverging diamond interchange (DDI) at the I-94/US-127/West Avenue junction.
 - Replacing the Lansing Avenue bridge to be higher and wider than the current bridge to accommodate the widening of I-94.
- Rebuilding the I-94/Elm Avenue interchange to include roundabouts at the eastbound ramp terminal, the westbound ramp terminal, and the Rosehill Road/Elm Avenue/Seymour Road intersection.
 - Installing freeway lighting on I-94 from Airport Road to east of Elm Road to improve safety for motorists and first responders.
 - Installing lighting on a majority of the interchange ramps within the project limits.
 - Building additional sidewalk and a pedestrian tunnel at the I-94/US-127/West Avenue interchange.

Major Highway Projects

This section provides updates on several of the department's major ongoing highway projects and information on a technology expansion project planned across the state.

Gordie Howe International Bridge

The Gordie Howe International Bridge (GHIB) project is a new freeway-to-freeway border crossing system between Detroit, Michigan, and Windsor, Ontario, that will improve the flow of international trade between the United States and Canada at the busiest border crossing between the two countries.

The project has three primary elements: a new Detroit River crossing (bridge), new state-of-the-art border inspection areas on each side of the river for the U.S. and Canadian border services agencies (plazas), and direct connections to highway systems in each country (I-75 in the United States and Highway 401 in Canada via the new \$1.4 billion Rt. Hon. Herb Gray Parkway). The bridge structure will include a dedicated multi-use path to accommodate pedestrians and cyclists.

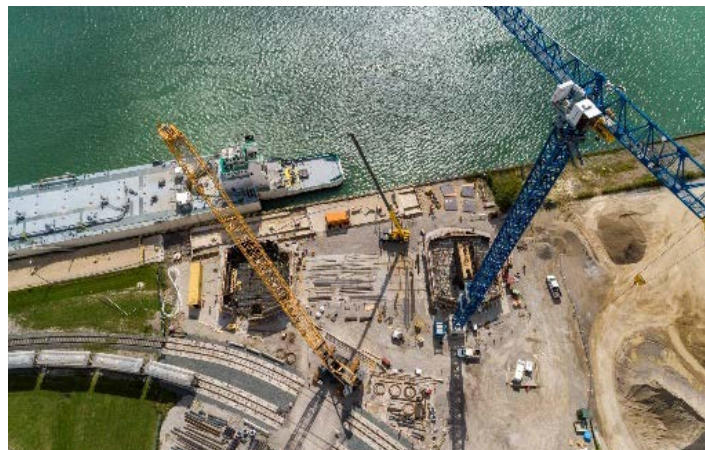

The project recently passed a major milestone with the completion of required right-of-way (ROW) acquisition in the U.S. (further activity will take place for a planned rail spur west of the plaza). The design of the overall project is more than 94 percent complete, with work nearly 6 percent complete based on activity duration. Much of

the work to date has involved geotechnical investigation, utility relocations and land preparation, including demolition and environmental remediation. Other major work is also underway on the main components of the project, with 70 percent of construction hours expected to occur between 2021 and 2023.

Implementation of this project will be complex, lengthy, and must comply with the Crossing Agreement between Michigan and Canada. The GHIB will be publicly owned by the State of Michigan and the government of Canada, with the Windsor-Detroit Bridge Authority overseeing the work of the public-private-partnership, managing the concession agreement and payments, and setting and collecting tolls.

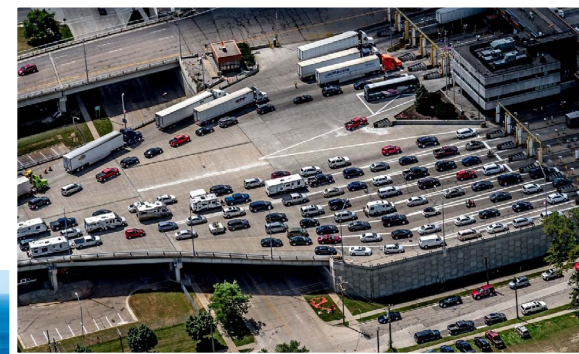

So far, the COVID-19 pandemic has had minimal impact on the project operationally, with construction and oversight activities able to continue with safeguards in place. Final impacts on the project schedule and completion date remain to be seen and, like a lot of things right now, will depend on how work progresses over the next several months. To stay updated on the project, please visit www.gordiehoweinternationalbridge.com.

Blue Water Bridge Plaza

The Blue Water Bridge Plaza Study was completed in 2009 with a Record of Decision that proposed to expand the U.S Port of Entry and improve 2.5 miles of the I-94/I-69 corridor west of the plaza, including a new international Welcome Center. The study was driven by the small size of the existing plaza (18 acres), along with the need for increased border security, new inspection technologies, procedures and policies, traffic growth, safety concerns, and aging and obsolete infrastructure leading to the plaza. The proposed plaza included a 38-acre expansion and relocating M-25 (Pine Grove Avenue) to the west of the proposed footprint. Shortly after completion of the study, U.S. Customs and Border Protection announced it could not fund their new facilities within the plaza expansion. As a result, the overall project was broken into phases, allowing the improvements west of the plaza to be completed while MDOT pursued additional funding.

In 2013, MDOT investigated a plaza expansion alternative that focused on a reduced plaza footprint located to the west of Pine Grove Avenue. Cost savings through

minimizing impacts on Pine Grove Avenue and reusing more of the existing plaza infrastructure greatly improved the potential to finance this alternative, which would be located within the original plaza expansion limits and provide most of the original project's benefits, including:

- Flipping primary inspection lanes to allow trucks to enter inspections from right lanes to eliminate weaving on the bridge.
- Elimination of the existing off-plaza duty-free facility and its relocation within the plaza.
- Building a new secondary commercial inspection on the expanded plaza site.
- Building exit control to deter port runners.
- Building a new privately owned vehicle secondary inspection on the existing plaza.
- Provision of three outbound lanes and median turnarounds west of the plaza for drivers not planning to enter Canada.

In pursuit of discretionary funds to help finance the facilities, MDOT successfully received a 2020 Infrastructure for Rebuilding America (INFRA) grant of \$25 million toward the total project cost of \$300 million. The remainder of the project funds will be from Blue Water Bridge toll revenues. Major next steps include an environmental re-evaluation and a feasibility study by the General Services Administration (GSA) on the new plaza alternative. Additionally, there are several ROW acquisitions and a required relocation of a DTE substation that are critical, with coordination underway.

The plaza expansion is expected to use a design/build contracting process to rebuild the plaza. Work is expected to begin in 2023 with substantial completion anticipated at the end of 2025, and will be staged so that the border crossing will remain open at all times.

I-94 Modernization Project in Detroit

The I-94 Modernization Project will bring approximately 7 miles of I-94 in the city of Detroit up to current safety and design standards. It involves the complete redesign and rebuilding of I-94 from I-96 to Connor Avenue. The project includes adding one lane in each direction to relieve congestion, replacing 67 bridges along the corridor and at the interchanges, wider shoulders, a new drainage system, and the lengthening of entrance and exit ramps and other improvements to increase safety and provide greater mobility for motorized and nonmotorized transportation.

The development and building of several I-94 bridges is ongoing. The replacement of bridges over I-94 at Woodward Avenue, Trumbull Street, Van Dyke Avenue, Gratiot Avenue, Chene Street, Brush Street, French Road, and Concord Avenue have been completed. Bridges at East Grand Boulevard, Mt. Elliott Avenue and Milwaukee Avenue over I-75 are being built. Second Avenue work started in 2020 and will be completed during the 2021 construction season. Bridges at Frontenac Avenue, Burns Avenue and Cadillac Avenue will be built in 2021, with bridge at Cass Avenue and Grand River Avenue to be built in 2022.

Third Street will be removed in 2021. In 2022 and 2023, MDOT will be replacing two Conrail Railroad bridges along the corridor in order to accommodate the planned freeway improvements. Active transportation and demand management (ATDM) plans are being developed along Gratiot and Michigan avenues to accommodate increased traffic flow during the rebuilding of I-94. The ATDM project along I-94 is currently underway and should be completed in 2021. ROW acquisition is currently ongoing throughout the corridor.

MDOT has completed a Supplemental Environment Impact Statement (SEIS), which studied modifications to the project in response to stakeholder comments. The SEIS was approved by the Federal Highway Administration (FHWA) in June 2020, allowing MDOT to proceed with design, ROW acquisition, and work on the modified portions of the project. In addition to the ongoing design and building of several bridges, MDOT will begin the final design of the first portion of the main I-94 corridor, with project limits from Burns Avenue to Barrett Avenue in the city of Detroit, with rebuilding expected to begin in 2024.

will help reduce the potential of rear-end crashes, having significant long-term benefits. To achieve this, the system will replace outdated signals and allow MDOT to remotely determine malfunctioning signals, saving response time and money. The CSCS will create a centralized traffic signal management system with innovative technology that will allow the state to quickly detect and mitigate traffic signal issues. This will also be a faster way to document and collect information regarding these issues to improve decision-making.

Central Signal Control System Expansion Project

MDOT was awarded \$8.3 million for its statewide Central Signal Control System (CSCS) expansion project by the U.S. Department of Transportation (USDOT) through the Better Utilizing Investments to Leverage Development (BUILD) grant program. BUILD grant funding was awarded to 70 projects in 44 states, including Michigan.

This project will help create a safer, more efficient transportation system throughout the state by converting approximately 1,000 locations to the CSCS system across all signals the department owns, operates, and maintains statewide. Among the many benefits of this project, remote coordination of signal operations

Passenger Transportation Innovations

By using mobility challenge grants, federal discretionary grants, and other funding sources, the Office of Passenger Transportation (OPT) assists state and public transit agencies in the use of technology to improve the mobility of Michigan residents, especially seniors, persons with disabilities, and veterans. This section highlights current and planned passenger transportation projects during the FY 2021-2025 timeframe.

North American International Auto Show Mobility Challenge

The North American International Auto Show (NAIAS) Mobility Challenge solicited proposals to create new and dynamic technology deployments that embody how connected and automated vehicle (CAV) technologies can transform how we live, work, and play. In June 2020, two companies were awarded challenge grants to demonstrate the use of CAV technology to move media representatives from Detroit Metropolitan Airport to downtown Detroit during the NAIAS. Originally planned for the 2020 show but cancelled due to COVID-19, the demonstration is expected to occur in 2021. Another five proposals were approved to circulate the general public in downtown Detroit.

The shuttles will include features such as:

- In-vehicle teleoperating,
- Automated vehicle monitoring,
- In-vehicle live sensor data displays,
- Automated ramps and restraints,
- 3D-printed vehicles,
- Smart bollards to provide alerts that the vehicle is in operation, and
- Remote operation.

Safety Demonstration Projects

Vehicle crash avoidance technology will be piloted at the Bay Area Transportation Authority in Traverse City, and a pedestrian detection system designed to improve safety for passengers boarding or disembarking and people in the roadway will be demonstrated at the Suburban Mobility Authority for Regional Transportation (SMART) in southeast Michigan.

Automated Bus Consortium

MDOT partnered with the Michigan Economic Development Corp. and PlanetM to join 10 other transit and transportation agencies from around the country to form the Automated Bus Consortium, a collaboration lead by AECOM. This consortium is designed to investigate

the feasibility of implementing automated bus projects across the U.S. The consortium is an innovative approach intended to accelerate the deployment of automated transit technologies and will combine the purchasing power and collaborative decision-making of these founding transit agencies.

The pilot projects will use 40-foot full-speed buses to allow consortium members to demonstrate and deploy automated technologies in live service environments. By joining the consortium, the cost of conducting local automated bus projects will be reduced for each agency. Lessons learned and best practices from each pilot project will be shared among member agencies and with the Federal Transit Administration (FTA) to promote better and faster learning and adoption of safety protocols and operational insights. The plan is to begin purchasing the automated buses in 2022 with deployments beginning in 2023.

Zero-Emission Bus and Infrastructure

MDOT, in partnership with CALSTART, was awarded a federal Low or No-Emission Bus Program (Low-No) grant for the planning, procurement, and demonstration of fully electric transit vehicles and charging stations at six agencies across the state. CALSTART will assist with planning routes, infrastructure placement, and the procurement process. The vehicles will range in type from vans to mid-size buses. This deployment will inform the expansion of more zero-emission vehicles throughout the state.

Passenger Transportation COVID-19 Response

OPT is focused on using technology and innovation to help the industry recover from the COVID-19 pandemic and be better prepared to respond to future challenges.

The Coronavirus Aid, Relief, and Economic Security Act (CARES Act) provided transit funding to MDOT to assist with COVID-19 response and recovery in rural areas of the state. A large portion of the funds will be used to provide

operating and capital assistance to rural transit agencies and intercity bus carriers as they deal with the economic impact of the pandemic. A portion of the funds will be used for projects of statewide significance, including:

- **Emergency Preparedness Plans:** A consultant will be hired to prepare/update emergency preparedness plans for all rural agencies to guide the preparation for and response to all future emergencies. Although many agencies have emergency plans, few had plans that addressed a pandemic response specifically.
- **Transit Information Campaign:** In order to support the general understanding of the benefits of public transportation, especially benefits during times of an emergency situation, a firm was hired to develop an information campaign to communicate how public transit improves the social and economic health of our state.
- **Mobility as a Service (MaaS):** The ability to easily access up-to-date information about transit services available throughout the state is a need identified during this time of global pandemic. Transit services needed to adapt quickly and often in order to protect drivers and passengers. Conveying the changes to the public was difficult and cumbersome using traditional means. A MaaS platform can provide essential information in real time and make it easier to plan a transit trip. OPT plans to hire a technology firm to develop a statewide MaaS platform that can be expanded to meet the needs of different agencies around the state.

The technologies that are being demonstrated and studied around the state and nation have taken on a new level of importance as they provide essential assistance in the pandemic response. Automated wheelchair securement systems, contactless fare systems, and app-based scheduling all reduce the need for close contact during the trip process, keeping passengers and drivers safer than ever before. The expansion of these technologies will be an ongoing effort over the course of this five-year transportation program.

Improvements to Rail and Aeronautics Infrastructure

Rebuilding of the First Detroit Metro Airport Runway

Detroit Metropolitan Airport (DTW) is completing work to rebuild Runway 3L/21R and the associated taxiways. This was the first runway built at DTW in the 1950s and has reached the end of its useful life. The rebuilding project will ensure that all current Federal Aviation Administration (FAA) standards are met and will improve the efficiency of the airfield by reducing departure times. Passengers will see the rebuilding project in progress but flight schedules will not be impacted. The overall cost of this multi-year project, including both design and building phases, is approximately \$256 million, and is being paid for with a combination of federal and local funds.

Kalamazoo-to-Dearborn Rail Corridor Improvements

Beginning in FY 2020 and extending through FY 2025, MDOT will be investing \$54.6 million in bridge replacements and track improvements on the state-owned rail corridor between Kalamazoo and Dearborn. The project will be funded in part by a \$23.3 million State of Good Repair grant from the Federal Railroad Administration (FRA), with a limited amount of funding also coming from Amtrak.

Revenue Assumptions and Investment Strategies

MDOT is responsible for all roads and bridges on the state highway system, known as the state trunkline system, that start with M, I, or US, such as M-43, M-59, I-94, I-96, US-131, and some unsigned or old routes. MDOT jurisdiction includes approximately 9,700 route miles of state trunkline highways and 4,413 bridges. The state transportation system, including roads, bus, rail, nonmotorized facilities, aviation, marine, and inter-modal facilities, plays an integral role in supporting the state and region's economy and quality of life for residents. The 5YTP presents MDOT's planned investments in this system, which are selected to provide direct benefit to Michigan citizens by preserving and improving infrastructure condition while also enhancing safety and offering expanded mobility and access options.

This 5YTP represents a state investment, across all modes, of about \$16.4 billion, which includes highway, aviation, bus, rail, and marine programs. A total of \$13.3 billion will be invested in the 2021-2025 Highway Program with a continued focus on preservation, repair, and maintaining operations. Over these five years, an estimated \$601 million

will be invested in the Aviation Program and \$2.5 billion will be invested in the Public Transportation Program, including bus, rail, marine, and port programs that focus on system preservation.

Highway Program

Federal Funding

FY 2020 was the fifth year of the surface transportation authorization bill, Fixing America's Surface Transportation Act, commonly known as the FAST Act. On Sept. 30, 2020, the FAST Act was extended for another full year, until Sept. 30, 2021. MDOT has worked with state DOTs across the country through the American Association of State Highway and Transportation Officials (AASHTO) to advocate for timely reauthorization that increases funding for federal transportation programs, improves state DOT flexibility to spend federal funds, and provides a long-term sustainable solution to the Highway Trust Fund's solvency problem. Total federal revenue expected over the five-year program time period of FY 2021-2025 is \$4.5 billion.

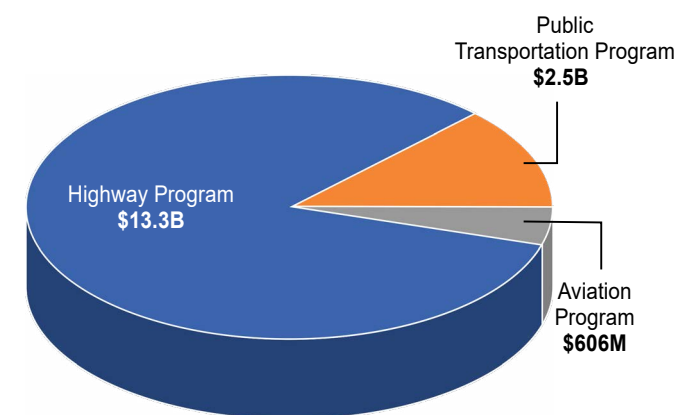

State Funding

The state has experienced challenges in providing adequate transportation funding. For many years, Michigan had difficulty finding state and local funds to match federal aid. State General Fund dollars were used in 2014-2016 to assure that MDOT did not lose available federal aid.

In 2015, a funding package that provides more state transportation revenue was signed into law. The nine-bill package included registration fee increases, motor fuel tax increases, and appropriations from income tax revenue. The 2015 funding package generates new revenue incrementally beginning in FY 2017 through FY 2021.

On Jan. 1, 2017, the gasoline tax increased from 19 to 26.3 cents per gallon, and the diesel fuel tax increased from 15 to 26.3 cents per gallon. The motor fuel tax was applied to

**FY 2021-2025
MDOT Transportation Program
\$16.4 Billion**

compressed natural gas (CNG) as well. Beginning in 2022, fuel tax rates will be tied to inflation to help remedy the decline in purchasing power of the fuel tax. Also on Jan. 1, 2017, registration fees for most cars and trucks increased 20 percent. New electric car fees of \$100 per year and \$30 per year for plug-in hybrid cars equalize road-user fees for vehicles that use little or no taxed fuel. In FY 2021-FY 2025, \$235 million annually in income tax revenue will be appropriated to the State Trunkline Fund (STF) as a result of the 2015 funding package.

November 2020 revenue projections estimate that nearly \$4 billion in state revenue is available for MDOT’s FY 2021-2025 Highway Program, including routine maintenance. During this same period, RBMP bonds will add an additional \$3 billion in road financing out of the \$3.5 billion to be generated by the program. The \$300 million in revenue associated with the Blue Water Bridge (BWB) Plaza Project will be coming from a federal grant, BWB toll revenues, and future BWB bonding. The state revenue estimates are based on the Michigan Department of Treasury forecast for the STF.

The magnitude and duration of the COVID-19 economic impacts remain uncertain. MDOT has managed its finances wisely but impacts on revenues and future programs will depend on the length and severity of the outbreak and its effect on the Michigan economy.

Funding Distribution

Public Act 51 of 1951 (Act 51) mandates how transportation funds are distributed and spent between MDOT and local entities. The intent of Act 51 is to distribute approximately 25 percent of federal aid to local jurisdictions for use on federal-aid eligible roads, with MDOT remaining responsible for ensuring federal regulations are followed and funds are managed appropriately. MDOT complies with this provision in an oversight role at various points throughout a project, while local agencies are responsible for planning and scoping projects, providing a complete design, and for providing testing and construction engineering services. Local agencies ultimately deliver more than 500 federal-aid projects annually with an average project cost of \$500,000.

The state funds collected from fuel tax and vehicle registration revenues are deposited into the Michigan Transportation Fund (MTF), the distribution fund for transportation revenues. After statutory off-the-top deductions, MDOT receives approximately 39 percent of this fund through the STF. County road commissions receive 39 percent of the MTF and cities receive about 22 percent.

Highway Investment Strategy

MDOT has a pavement preservation formula that allocates funding to its seven regions. The formula weighs four overall factors: pavement condition, eligible lane miles for pavement rebuilding and repair work, usage (based on average daily traffic volumes), and regional costs. The formula is updated annually with current pavement condition, traffic, cost, and eligible lane miles.

Bridge funding is distributed to MDOT regions through a bridge preservation allocation formula that uses the deck area of bridges in each National Bridge Inventory (NBI) condition. Funding is split into investment targets for replacement, repair, and preventive maintenance work.

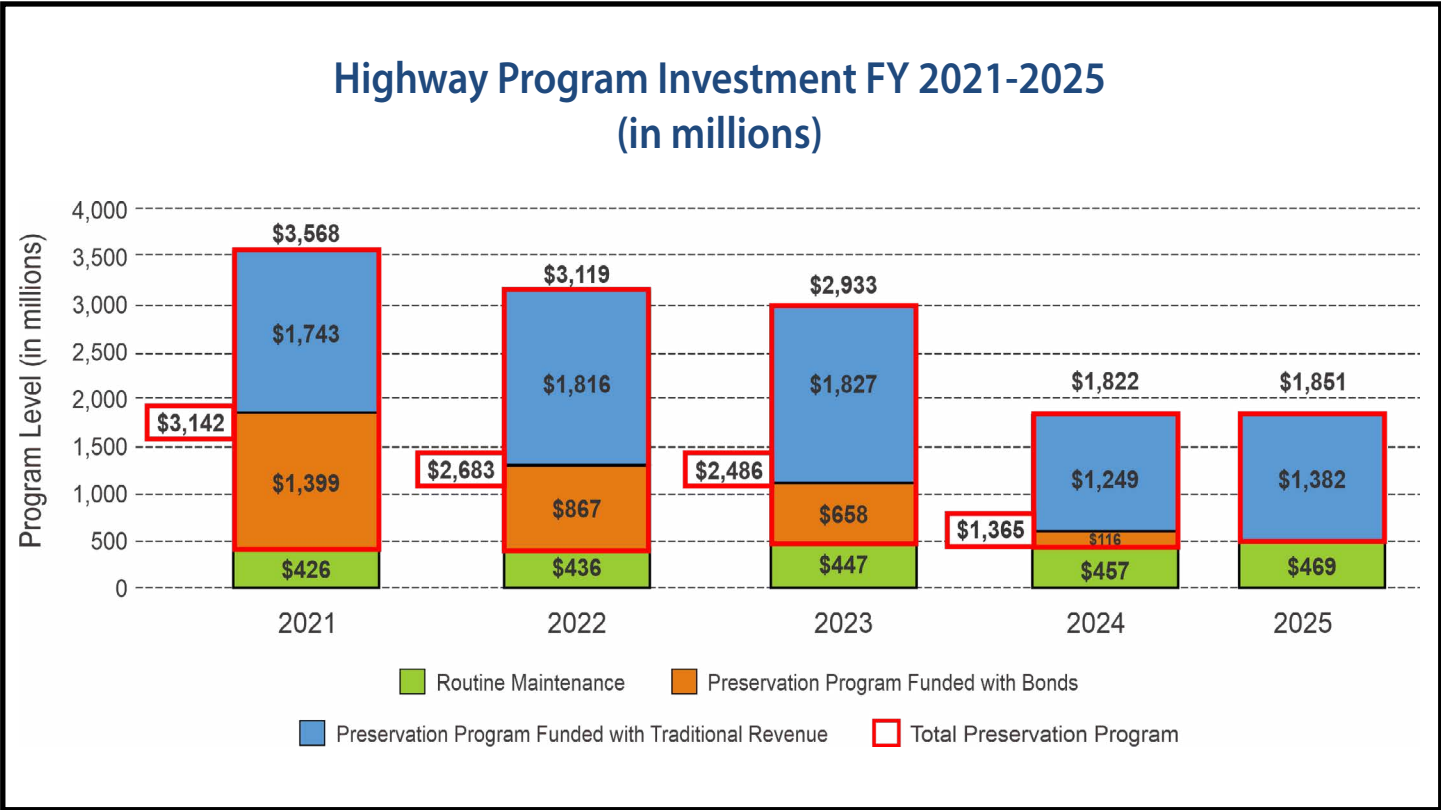

The table on the following page displays the investment strategy for FY 2021-2025 for the Highway Capital Program at \$13.3 billion. This total reflects investments for pre-construction (scoping, design, environmental clearance, and right-of-way acquisition) and building activities. This level of investment will provide Michigan travelers with approximately 580 miles of improved roads per year over the next five years, and repairs to 220 bridges per year. MDOT also will manage its road system by extending the life of approximately 800 miles of pavement each year through the capital preventive maintenance (CPM) program and 340 miles of non-freeway resurfacing.

Highway Program Investment FY 2021-2025

	FY 2021-2025 Annual Average (millions)	Five-Year Total (millions)
REPAIR AND REBUILD ROADS AND BRIDGES		
REPAIR AND REBUILD ROADS		
Rehabilitation and Reconstruction	\$1,230	\$6,150
Capital Preventive Maintenance	\$85	\$423
Freeway Resurfacing Program	\$19	\$94
Non-Freeway Resurfacing Program	\$38	\$190
Trunkline Modernization	\$236	\$1,178*
TOTAL - Repair and Rebuild Roads	\$1,607	\$8,035
REPAIR AND REBUILD BRIDGES		
Bridge Replacement and Preservation	\$178	\$892
Big Bridges	\$37	\$185
Special Needs	\$38	\$190
Culverts - Capital	\$9	\$45
Blue Water Bridge and Plaza	\$65	\$326
TOTAL - Repair and Rebuild Bridges	\$327	\$1,638
ROUTINE MAINTENANCE		
TOTAL - Repair and Rebuild Roads and Bridges	\$2,382	\$11,908
SAFETY AND SYSTEM OPERATIONS		\$188
OTHER STATE AND FEDERALLY FUNDED PROGRAMS		\$939
Transportation Alternatives	\$15	\$74
Roadside Facilities	\$8	\$42
Workforce Development	\$9	\$45
Non-Federally Funded Programs	\$57	\$284
Total - Other State and Federally Funded Programs	\$89	\$445
TOTAL - FIVE-YEAR TRUNKLINE PROGRAM		\$2,659
		\$13,293

*Includes \$407 million for the I-75 Modernization Segment 3 Project in Oakland County financed in 2018 through an innovative method called design-build-finance-maintain (DBFM).

The following chart illustrates the annual Highway Program investments over the five-year time frame. Routine maintenance investment is expected to increase year by year due to an increase in inflation. The total highway program investment in system preservation is shown below as being funded by traditional transportation revenue sources as well as with an infusion of RBMP bond funds for FY 2021-2024.

Multi-Modal Program

MDOT’s FY 2021-2025 Multi-Modal Program includes two main areas: public transportation and aviation. The Public Transportation Program is administered by two offices: the Office of Passenger Transportation (OPT) administers the bus and marine programs while the Office of Rail (OOR) administers the rail and port programs. The Office of Aeronautics administers the Aviation Program. These three offices provide capital and operating assistance, technical support, and safety oversight for the department’s Multi-Modal Program.

The Multi-Modal Program is primarily focused on continued safe and secure operation of the existing transportation system through routine maintenance, capital replacement and repair, and preservation of existing service levels. MDOT’s approach to the Multi-Modal Program differs from the Highway Program as much of the infrastructure is owned, managed, and operated by entities other than MDOT, and the state and federal funding that MDOT is responsible for represents only a small portion of the overall investments in these modes.

The investment of CTF revenues in the Public Transportation Program is determined by detailed requirements currently set forth in Act 51, as well as the annual appropriations process. Act 51 requires the majority of CTF revenues to be used for local transit and are focused heavily on the preservation of the existing public transportation system. Because the CTF is subject to an annual appropriations process, it is rare that MDOT makes a multi-year funding commitment from the CTF, other than continuation of the annual programs mandated in Act 51. Therefore, what is presented in this document is MDOT’s annual program for FY 2021, the estimated funding that may be available for the remaining years of the program (FY 2022-2025), and a description of the factors anticipated to influence both the funding availability and the annual decisions that will be made over the life of this program.

In FY 2021, Public Act 167 of 1933 was amended to redirect \$18 million of sales tax revenue from the CTF to the general fund. This redirection, plus the reduced revenues due to COVID-19, makes a significant negative impact on programs funded by the CTF.

MDOT’s Multi-Modal Investment Strategy

Subject to appropriation of state, federal, local, and private funds.)

Public Transportation Program

MDOT’s Public Transportation Program includes local bus, intercity bus, marine passenger, vanpooling, port, freight rail, and passenger rail. The program provides for a combination of capital and operating assistance, technical support, safety oversight, and compliance monitoring for each of the modes.

The Public Transportation Program is primarily supported by annual appropriations. Revenue from the Comprehensive Transportation Fund (CTF) and the FTA are expected to grow slightly based on inflation, for a total five-year investment estimated at \$2.51 billion.

	FY 2021	Five-Year Total
PUBLIC TRANSPORTATION PROGRAM		
Local Bus, Intercity Bus, Passenger Rail, Rail Freight, and Ports**	\$483.11 million	\$2.51 billion
AVIATION		
Airport Improvement Program (AIP)*, Air Service Program (ASP)	\$121.15 million	\$606 million
TOTAL	\$604.26 million	\$3.12 billion

**Includes federal, local, private, and state expenditure authority, which is often overstated to account for potential revenue. Due to the unrolling of the Transit Capital line item into two line items in FY 2020, and the redirection of \$18 million in sales tax in FY 2021, federal and local expenditure authority estimates needed to be increased.*

***Includes comprehensive program of needed investments for primary airports and general aviation airports, as identified in the MDOT AIP.*

The COVID-19 pandemic has had significant impact throughout Michigan. Transit agencies across the state are struggling to determine the right balance of providing essential services, while also keeping passengers and drivers safe. Several urban agencies have eliminated routes and replaced them with very limited demand-response service. Many rural agencies (and some urban) are delivering groceries/meals and prescriptions in lieu of taking people to the stores, routes have been suspended or reduced, and agencies have gone fare-free to reduce money-handling and germ transmission. Federal relief funds have been awarded to help reduce the financial strain on transit providers; however, it will likely take two or more years to rebuild ridership and revenues. It is unlikely that any system will look or operate the same way it did before the crisis.

Local Bus Program

The Local Bus Program provides funding for operating and capital support, training, and special projects to local bus operators that service the public. Assistance is also provided to support transportation services focused on the needs of senior citizens and persons with disabilities, as well as the transportation-to-work needs of low-income individuals. A total of 119 providers (81 local agencies and 38 specialized services agencies) in all 83 Michigan counties are provided support under these programs.

State funds are combined with federal and local dollars, including farebox revenue and local millages, to support operation and maintenance of the local bus network. The budgeted funds for FY 2021 are anticipated to maintain the current funding levels in state Local Bus Operating (LBO) assistance. The CTF available to match federal aid will be enough to leverage all anticipated federal operating and capital formula allocations but may not be enough to match all competitive awards. A high level of success in receiving federal discretionary funds could put a strain on the CTF.

MDOT's local bus investments will focus on:

- Preserving existing services in all 83 counties via operating assistance to local bus and public marine service providers.
- Preserving and maintaining existing infrastructure (largely locally owned) via state investment and match for federal funds to support routine vehicle replacement.
- Supporting local capital strategies established by individual agencies via matching federal capital grants for infrastructure replacement and repairs, and, in very limited situations, some minor capacity expansion.

The FAST Act continued all federal transit formula programs as outlined in the Moving Ahead for Progress in the 21st Century Act (MAP-21),

with increases that are roughly inflationary. It maintains the same basic structure of these programs in terms of which programs and amounts apportioned to the state to deliver to sub-recipients, and funds that are apportioned directly to urbanized areas.

The FAST Act included the Bus and Bus Facilities competitive program that allows the FTA to issue grants to states and transit agencies for capital projects. This program restored an important source of capital funding eliminated in the Moving Ahead for Progress in the 21st Century Act (MAP-21), which had resulted in a reduction of federal funding to agencies in Michigan and projected declines in the condition of the state's bus infrastructure. MDOT and urban agencies throughout the state are likely to compete for these funds in hopes of receiving grant awards to improve the condition of rural and specialized transit fleets.

It is important to note that more than 80 percent of FTA formula funds for local bus systems go directly to transit agencies and are not reflected in MDOT's 5YTP. Under Act 51, all federal funds are matched by MDOT using the CTF funding appropriated for that purpose. When CTF dollars are not enough to match federal funds, the impact is absorbed by the local transit infrastructure and reduces a transit agency's ability to access federal funds. Given the discretionary nature of some of these funds, it is not yet known if the CTF dollars available will be enough to match all available federal transit aid.

Vanpooling Program

The MichiVan Program will be maintained with state, federal, and local funds. MDOT contracts with private service providers to help organize and sustain the MichiVan vanpool program as a commuting alternative. Federal funds for MichiVan come from the FHWA's Congestion Mitigation and Air Quality (CMAQ) program and are included in the Highway Program Investment Strategy. In addition, a small amount of CTF is used each year for the program.

Marine Passenger Program

While the FHWA Ferryboat Formula Program provides a guaranteed annual allotment to eligible ferry systems

in Michigan, the annual funding level for each system is inadequate for major capital improvements, such as replacing ferry vessels, expanding terminals or docks, or other upgrades. The age of the ferry vessels in the state and the need for their replacement is rapidly becoming an urgent safety issue. Each ferry system that receives a federal allocation through this program determines how best to use the funds. The funding level is estimated to increase 2.3 percent each year. The funds that will come to Michigan under this program are not shown in the bus and marine programs but are included in the Highway Program Investment Strategy.

The four state-subsidized marine passenger systems will continue to receive LBO called for in Act 51 to preserve the service provided. State marine capital funds available throughout this five-year period will be used for routine infrastructure maintenance and improvements to ensure the integrity of the system. However, due to the small amount of state and federal capital funding available for the Marine Passenger Program, deterioration of the locally owned infrastructure over the life of this program is likely. With the inability to provide funding for the much-needed replacement ferry vessels, ferry services in the state may be impacted.

Intercity Bus Program

The Intercity Bus Program provides both operating and capital assistance for the intercity network in the state, with the goal to allow residents access to the national transportation network. The program is supported with a combination of federal and state funds, except for the Terminal Development Program, which pays for small projects using state funds only.

The Intercity Bus Program distributes CTF and federal Section 5311(f) program funds for the purchase of motor coaches and the support of select intercity bus routes within Michigan. In addition, the program is responsible for maintaining four transportation centers throughout the state. The Detroit intercity bus facility is nearing the end of its useful life, so more frequent and thorough inspections will continue in order to maintain the aging infrastructure until plans for a new facility can be finalized. Failure of any major mechanical or structural

components could require allocating additional funds and speeding up the facility replacement schedule. The goal is to incorporate intercity bus services into a multi-modal service center.

MDOT will continue to use state and federal funds to contract with intercity bus carriers to provide route service that would not otherwise exist (i.e., service that would not be provided by the carrier absent a state subsidy) and that are essential to maintaining national connectivity. Every three years, MDOT bids out the five routes in northern Michigan that private carriers have previously abandoned due to lack of profitability. Vehicles used on these routes and routes in the southern portion of the state deemed essential to national connectivity also are funded with a combination of state and federal funds. Based on the FAST Act and anticipated CTF funding levels, the current level of service will be maintained from FY 2021 through FY 2025.

The federal In-Kind Match Program allows states to use the value of connecting unsubsidized intercity bus service as in-kind match for a route subsidized by the FTA 5311(f) program, allowing MDOT to stretch both state and federal funds without putting stress on state funding. MDOT will continue to utilize this program to support a route between Detroit and Port Huron that provides a meaningful connection for both bus and train passengers.

In addition to the Detroit-to-Port Huron route, MDOT has engaged in a partnership with the Wisconsin Department of Transportation (WisDOT) to co-fund two routes that benefit both states and provide meaningful connections to the national network. However, beginning in FY 2018, WisDOT began using the federal In-Kind Match Program to fully fund one of these routes using their federal 5311(f) funding and credits generated from a privately funded route in Wisconsin, freeing up Michigan CTF funds to be used for other in-state projects. WisDOT intends to fund the second route with in-kind match as well, but it may not be during this 5YTP time period.

MDOT continues to evaluate two east-west routes to provide more access to the national intercity network. The route areas under consideration are in the upper part of the Lower Peninsula, with a route connecting Traverse

City to Gaylord and Alpena, and also in the central Lower Peninsula, with a connection between the Bay City/Saginaw area and the Mt. Pleasant and Big Rapids area. MDOT plans to implement the routes when secure funding for the routes becomes available.

Passenger and Freight Rail Programs

The Office of Rail (OOR) administers MDOT's rail and port programs, which are primarily supported with annual CTF appropriations. This 5YTP was developed based on the FY 2021 annual program and the estimated funding for the remaining years. OOR scales its efforts annually to fit available funding. Most of OOR's ongoing expenditures will be for intercity passenger rail service, with costs that are calculated annually. Additional investments will be made through other annual programs that are either application-based or identified through an annual prioritization process.

MDOT's passenger and freight rail program investments will include state and federal funds to preserve and enhance Michigan's passenger and freight rail systems, ensure railroad crossing safety and promote economic development. MDOT has benefitted from significant federal grants in prior programs and will continue to compete for additional funding, as appropriate, to continue its efforts to enhance this system. This 5YTP will include investments on the state-owned Dearborn-Kalamazoo corridor associated with approximately \$40 million federal grants that were awarded to MDOT in FY 2019 and FY 2020.

MDOT's passenger and freight rail program investments also will utilize CTF, MTF and dedicated federal-aid funds to preserve and enhance Michigan's passenger and freight rail systems, ensure railroad crossing safety and promote economic development. CTF funds are the only ongoing source of revenue for MDOT's passenger and freight rail efforts, with a \$21 million increase in CTF funding anticipated in FY 2021 for these activities. The impact of this increase is not as great on the OOR programs as it may seem. A large portion of this increase is due to a balancing of funds between OOR and OPT over the two-year period from FY 2020 and FY 2021. Due to the FY 2020 revenue reduction resulting from COVID-19,

OOR and OPT needed to lapse a portion of their FY 2020 appropriation. OOR took a greater portion of the lapse. In FY 2021, OOR is receiving a greater percent of the appropriation than they would have normally. This will balance out the two-year funding distribution.

Dedicated federal aid, which will gradually increase, and MTF funds support motorist safety at railroad crossings on local roads. MDOT will continue to compete for federal funding to assist with rail capital and maintenance investments, which may require additional state revenues to match federal funds to take advantage of these opportunities. STF dollars and corresponding dedicated federal funds support a trunkline crossing program that is invested as a part of the rail program, but those funds are accounted for as a part of the Highway Program.

The bulk of MDOT's investment in rail will be to preserve and enhance Michigan's intercity passenger rail services,

as mandated by federal statute or existing contractual arrangements. Under the Passenger Rail Investment and Improvement Act of 2008 (PRIIA), MDOT is responsible for providing operating support for the three Michigan intercity routes that serve 22 station communities. In FY 2021, MDOT plans to invest \$37.5 million in Amtrak's operation of these three routes, including some shared costs related to the Midwest intercity passenger rail fleet.

Investments on the state-owned corridor between Kalamazoo and Dearborn will focus on what is needed to meet the federal grant requirements associated with the purchase and initial investments in the corridor. Requirements include achieving and maintaining passenger train speeds of up to 110 mph. In FY 2021, MDOT plans to invest \$24 million in maintenance and capital improvements on the state-owned Kalamazoo-Deerborn corridor, in addition to a portion of the \$40 million federal grant.

Remaining CTF dollars will be strategically invested in state-owned freight line preservation and freight economic development, while dedicated MTF and federal dollars will be invested in safety enhancements at railroad crossings. Specific projects will be identified annually based on available funding, but FY 2021 generally will include preservation of freight service on state-owned corridors, grants provided through the Freight Economic Development Program, matching federal grant funds awarded to Lake State Railway, and projects to reduce motorist risk at railroad crossings.

Port Program

For each of the next five years, MDOT anticipates providing approximately \$420,000 in legislatively appropriated funding to the Detroit-Wayne County Port Authority to assist with operating costs and marketing activities.

Aviation Program

The Federal Aviation Administration (FAA) Reauthorization Act of 2018 reauthorized the FAA and aviation programs until the end of FY 2023. This includes the Airport Improvement Program (AIP) that provides more than \$3.18 billion annually in entitlement and discretionary grant funds for more than 3,300 eligible airports nationwide. Estimated federal funding for Michigan's 95 eligible airports is based on previous years' funding levels. In addition to the Reauthorization Act, supplemental appropriations were passed, adding additional discretionary funding through FY 2022 with individual grants being determined by the FAA. At this time, FY 2024 and FY 2025 funding levels are uncertain and are estimated to remain at current levels.

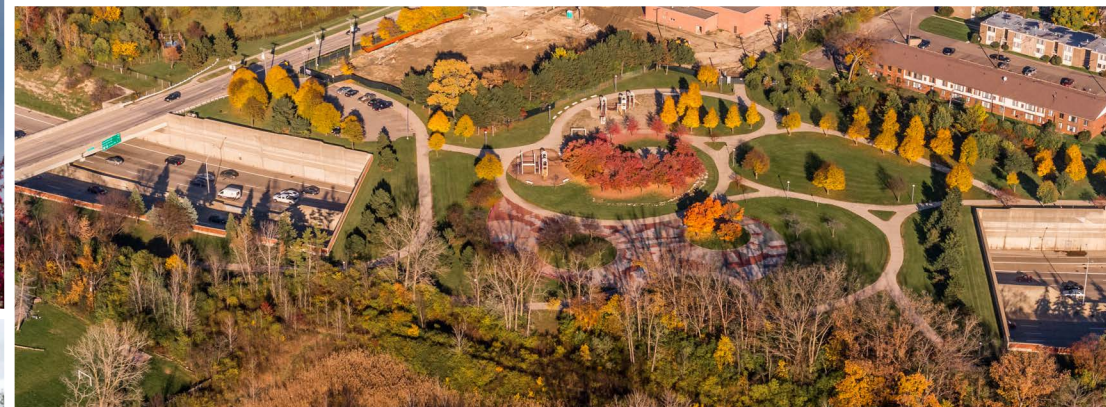

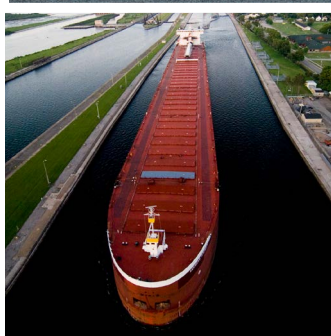

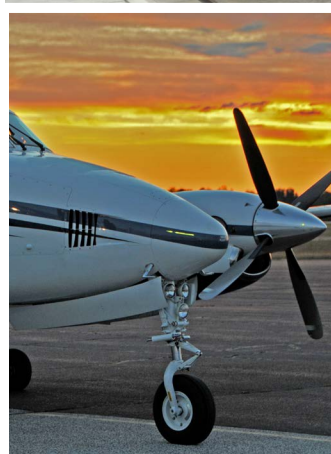

State aeronautics funding levels are an ongoing challenge. The State Aeronautics Fund (SAF) revenue comes from sales tax and excise tax on aviation fuel and the Airport Parking Tax. In 2015, part of the state sales tax on aviation fuel was allocated to the SAF, as well as the Qualified Airport Fund. Revenue from airport parking tax supports debt service for bonds issued and disbursed in the early 2000s, to be repaid through 2032. As the bond debt is paid, revenue received from the airport parking tax can be dedicated to the capital outlay budget. However, with a decrease in aviation fuel consumption and passenger enplanements due to COVID-19, revenue projections indicate a shortfall. At this time, it is not known if there will be sufficient state aeronautics funds to match current federal funding with the standard 5 percent state participation (90 percent being federal funding and the other 5 percent local funding). Also,

due to the decrease in funding, the FY 2021 Air Service Program has been reduced from \$250,000 to \$50,000.

It is expected over the next five years \$600 million in federal and state funds will be invested in the federal AIP. This program provides funding for approximately 226 public use airports for capital improvement projects and pavement maintenance. Of the 226 eligible airports, 95 receive federal entitlement funding as part of the National Plan of Integrated Airport Systems.

The Office of Aeronautics strives to provide the safest and most efficient aviation system in the nation by employing new technologies and continually improving internal processes. Unmanned aircraft systems and advanced pavement management systems are now being utilized to help provide the highest quality service.

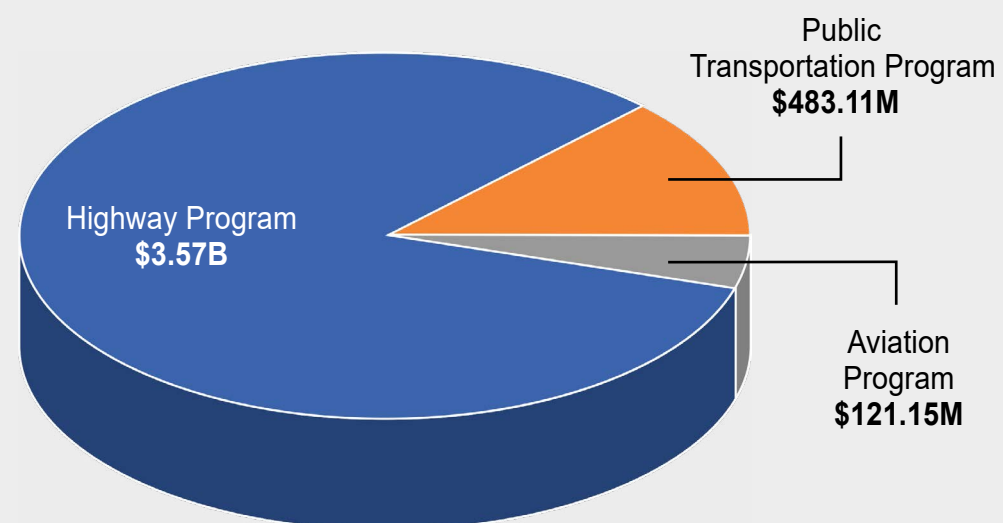

Highlighting Upcoming FY 2021

MDOT's \$4.17 billion FY 2021 program investment is a vital part of Michigan's economy, estimated to support 45,600 jobs by continuing to invest in the preservation of the transportation system, safe mobility for motorists, and efficient system operations.

Of that total investment, MDOT will dedicate approximately \$3.6 billion to system preservation, maintenance, safety, and operation of Michigan's state trunkline roads and bridges. MDOT will invest \$604.26 million in state, federal, local, and private funds to maintain Michigan's Multi-Modal Program, providing capital and operating assistance, technical support, and safety oversight of the air, passenger rail, rail freight, marine and port, and local and intercity bus sectors of Michigan's transportation system.

FY 2021 MDOT Transportation Program \$4.17 Billion

FY 2021 Transportation Program

Highway Program Revenue Assumptions

The FY 2021 Highway Program is developed based on anticipated federal and state revenues. It is projected that approximately \$866 million in federal funding will be available in FY 2021 for the highway capital program. The estimated state transportation revenue available is \$718 million, plus an additional \$1.4 billion in RBMP bond proceeds. The \$47 million in revenues associated with the BWB Plaza Project for FY 2021 will be coming from a federal grant, BWB toll revenues, and future BWB bonding.

Public Transportation Program Revenue Assumptions

The FY 2021 Public Transportation Program (including the bus, marine, passenger rail, freight rail, and port programs) is based on the state FY 2021 budget. It includes federal, state, local, and private revenue. The FY 2021 program budget includes \$327 million of CTF as well as \$156 million from other federal, state, and local sources, for a total FY 2021 program of \$483 million. This is comprised of Department of Treasury's Office of Revenue and Tax Analysis (ORTA), August 2020, revenue estimates, a redirection of \$18 million sales tax revenue from the CTF and estimated unreserved CTF fund balance at the end of FY 2020.

The FY 2021 CTF program appropriation is approximately 0.7 percent more than the FY 2020 CTF appropriation. The Public Transportation Program's revenue assumptions include more than \$81 million of federal spending authority for potential federal grants to MDOT. The rail program's revenue assumptions include an increase of \$10 million federal expenditure authority for Rail Operations and Infrastructure. It also includes a continuation of dedicated federal and MTF funding allocations for rail crossing programs at FY 2020 levels.

Aviation Program Revenue Assumptions

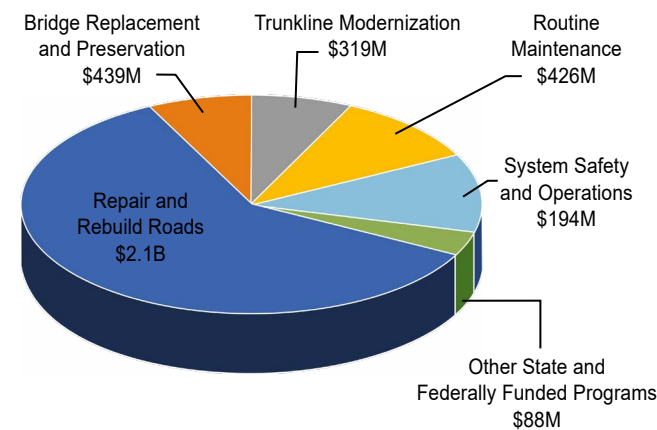

The FY 2021 Aviation Program is based upon the most current estimates available. Federal aid is projected to increase or remain unchanged for FY 2021 from the FY 2020 level. An additional \$20 million in discretionary or supplemental funding may come to Michigan in the form of federal grants through the AIP.

It is estimated that \$121.15 million in state and federal aviation funds will be available to be invested in FY 2021. This includes \$81.5 million in funding for primary airports, airports with regularly scheduled airline service and more than 10,000 passenger boardings each year; \$39.6 million for general aviation airports that are part of the National Plan of Integrated Airport Systems; and \$50,000 (100 percent state funds) for the Air Service Program.

Interested in an MDOT project? Please go to the project list starting on page 39 or go to the MDOT website at www.Michigan.gov/MDOT5YearProgram

MDOT FY 2021 Transportation Program

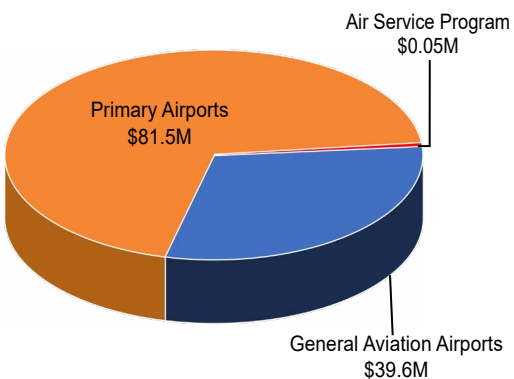

FY 2021 Highway Program \$3.6 Billion

Highway Program Investment Strategy

- The FY 2021 Repair and Rebuild Roads investment of \$2.1 billion includes approximately:
 - 640 lane miles of rebuilding and rehabilitation.
 - 830 lane miles of capital preventive maintenance.
 - 280 lane miles of freeway and non-freeway resurfacing.
- The Bridge Replacement and Preservation program includes replacement, rehabilitation, and capital preventive maintenance on 300 bridges, totaling \$439 million.
- The Trunkline Modernization program totals \$319 million, including the I-75 modernization project in Oakland County and the I-94 modernization project in Wayne County.
- Routine maintenance activities will total an estimated \$426 million.
- The Safety and Systems Operations category includes signs, pavement markings, traffic signals, operational improvements, and other programs that support the safe and efficient operation of the system, at a total investment of \$194 million.
- The Other State and Federally Funded Programs category includes investment in nonmotorized facilities/streetscapes, recreational trails, roadside facilities, workforce development, and other state and federally funded programs, for a total of \$88 million.

FY 2021 Aviation Program \$121.15 Million

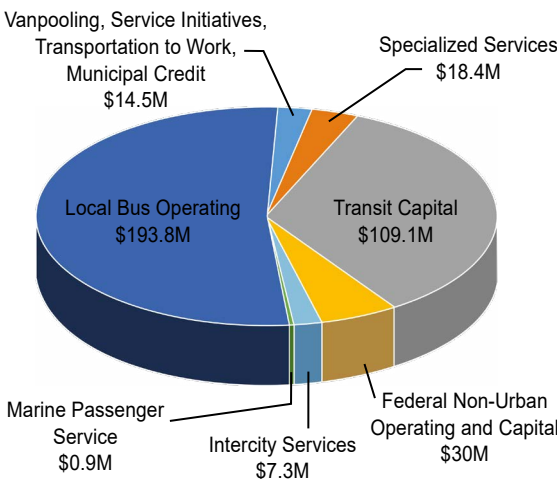

Aviation Program Investment Strategy

- Investment decisions are driven by priorities established to support the organizational mission and overall vision of the Office of Aeronautics. These priorities include:
- Application of an asset management approach to reduce system and facility deficiencies (Michigan Aviation System Plan 2017).
 - Preservation of critical infrastructure, particularly pavements, navigational aids, and protect airspace, with the goal to maintain 90 percent of all Tier I Airport Primary Runways in good or fair condition, as determined by Pavement Condition Index inspections.
 - Maximization of federal funds by leveraging state, local, and private funding.
 - Support for job growth and economic development through projects related to freight/logistics, aircraft maintenance, and other emerging opportunities.
 - Support of statewide efforts to attract and retain air service through the implementation of the Air Service Program (ASP).
 - Support for efforts to improve the quality of life for Michigan citizens and protect Michigan's natural resources.

MDOT FY 2021 Transportation Program

Public Transportation Program

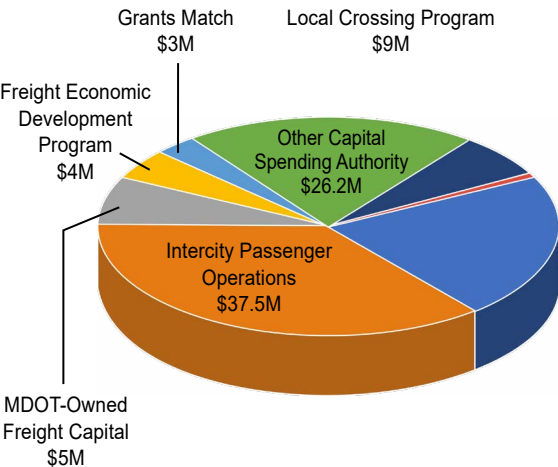

FY 2021 Bus and Marine Programs \$374 Million

Bus and Marine Program Investment Strategy

- CARES Act funds will be utilized for transit industry recovery from COVID-19.
- More than 82 million public transit trips in FY 2019.
- Preservation of existing local transit and marine services, including:
 - 78 local bus agencies.
 - Four passenger ferry systems.
 - 38 specialized service providers.
- Preservation of state-subsidized intercity bus service, including:
 - Five MDOT-contracted routes.
 - Four intercity bus/rail passenger transportation facilities.
- Preservation and maintenance of existing infrastructure, including:
 - Replacing some buses that are beyond their useful life.
 - Repairing and replacing facilities in accordance with the Transit Asset Management Plan.
- Limited funding for innovative projects, including:
 - Procure electric buses via federal Low-No grant.

FY 2021 Rail and Port Programs \$109 Million

Rail and Port Program Investment Strategy

- Passenger Rail
 - Amtrak-operating support for three Michigan corridors, including some shared costs for the Midwest fleet.
 - Maintenance and capital improvements on the Kalamazoo-Dearborn corridor, including investing a portion of \$40 million in federal grants awarded in FY 2019 and FY 2020.
- Grade Crossing Safety
 - Local roads: warning device enhancements at 40-60 locations and crossing surface improvements at 40-50 locations.
 - State trunkline: crossing surface improvements and/or device upgrades at 20-25 locations (funding reflected within Highway Capital Program).
- Freight Rail
 - Capital investments in the state-owned system.
 - Support new/expanding businesses through the Freight Economic Development Program.
 - Conduct calls for projects under the Michigan Rail Loan Assistance Program (MiRLAP) as funding allows.

Summary of 2021-2025 5YTP Public Comments

The public review and comment period for the preliminary draft of the MDOT 2021-2025 Five-Year Transportation Program was Jan. 25 - Feb. 25, 2021. On Jan. 25, MDOT placed the document on the MDOT website and issued a news release and e-mail notification to invite comments. Information and comments received were directed to appropriate MDOT project areas or MDOT region planners. Responses were sent to individuals to acknowledge a comment. Comments regarding local roads were forwarded to the appropriate MDOT region offices in order to provide a more detailed response.

The website containing the document and the interactive map received 3,485 page views and the document was downloaded 926 times within the comment period. MDOT received 22 public comments on the draft 2021-2025 Five-Year Transportation Program from 21 different individuals, which includes respective comments on various transportation planning aspects such as safety, traffic, nonmotorized travel modes, etc. Many of the comments were highly substantive and are included in the following categorized listing.

Statewide

- Two commenters mentioned that MDOT should invest more in public transit and rail or high-speed rail services.
- One commenter mentioned that Michigan could be better connected to Canada if more rail and boat connections were made available.
- One commenter did not like that MDOT is building flex lanes and considering conducting studies to build more of them in the future.
- One commenter suggested that MDOT should look in to developing a map that is updated in real time and would provide information about road conditions, downed power lines or trees, accidents, and other information that may be helpful to motorists to determine travel time delays or identify alternative routes.
- One commenter requested that highways such as I-94 and I-96 not be widened and that resources would be better spent on rail service in these corridors.
- One commenter felt MDOT should adopt a Complete Streets Policy.

Grand Region

- One commenter was concerned about bridge conditions around Grand Rapids in addition to the condition of I-96 between Grand Rapids and Lansing.
- One commenter was happy that 28th Street was scheduled for work but would like to see left turns managed away from signalized intersections. The commenter would also like to see work done on the westbound pavement west of Breton.

Summary of 2021-2025 5YTP Public Comments

Metro Region

- One commenter suggested that 13 Mile Rd between Van Dyke and Ryan Rd be redone in addition to the railroad crossing near Mound Rd.
- One commenter inquired if there was a plan to address the M-59/I-75 interchange.
- One commenter inquired about the planned I-696 work between I-96 and I-75 and whether it will be like the work performed in Macomb County in 2018.

North Region

- One commenter was happy that M-37 at Vance Rd in Traverse City will be widened for a center left turn lane.
- One commenter suggested that MDOT add bike lanes to roads as they are repaved/rebuilt.
- One commenter suggested converting M-55 in Roscommon Township to three lanes from Old US-27 to Loxley Rd in addition to fixing the bike paths along this stretch.
- One commenter suggested expanding US-31 from Benzonia to Chums Corner as road work is scheduled.

Southwest Region

- One commenter suggested eliminating the current M-96 and M-311 bridges over I-94 near Battle Creek and rerouting M-96 and M-311 together over I-94 with a redesigned interchange.

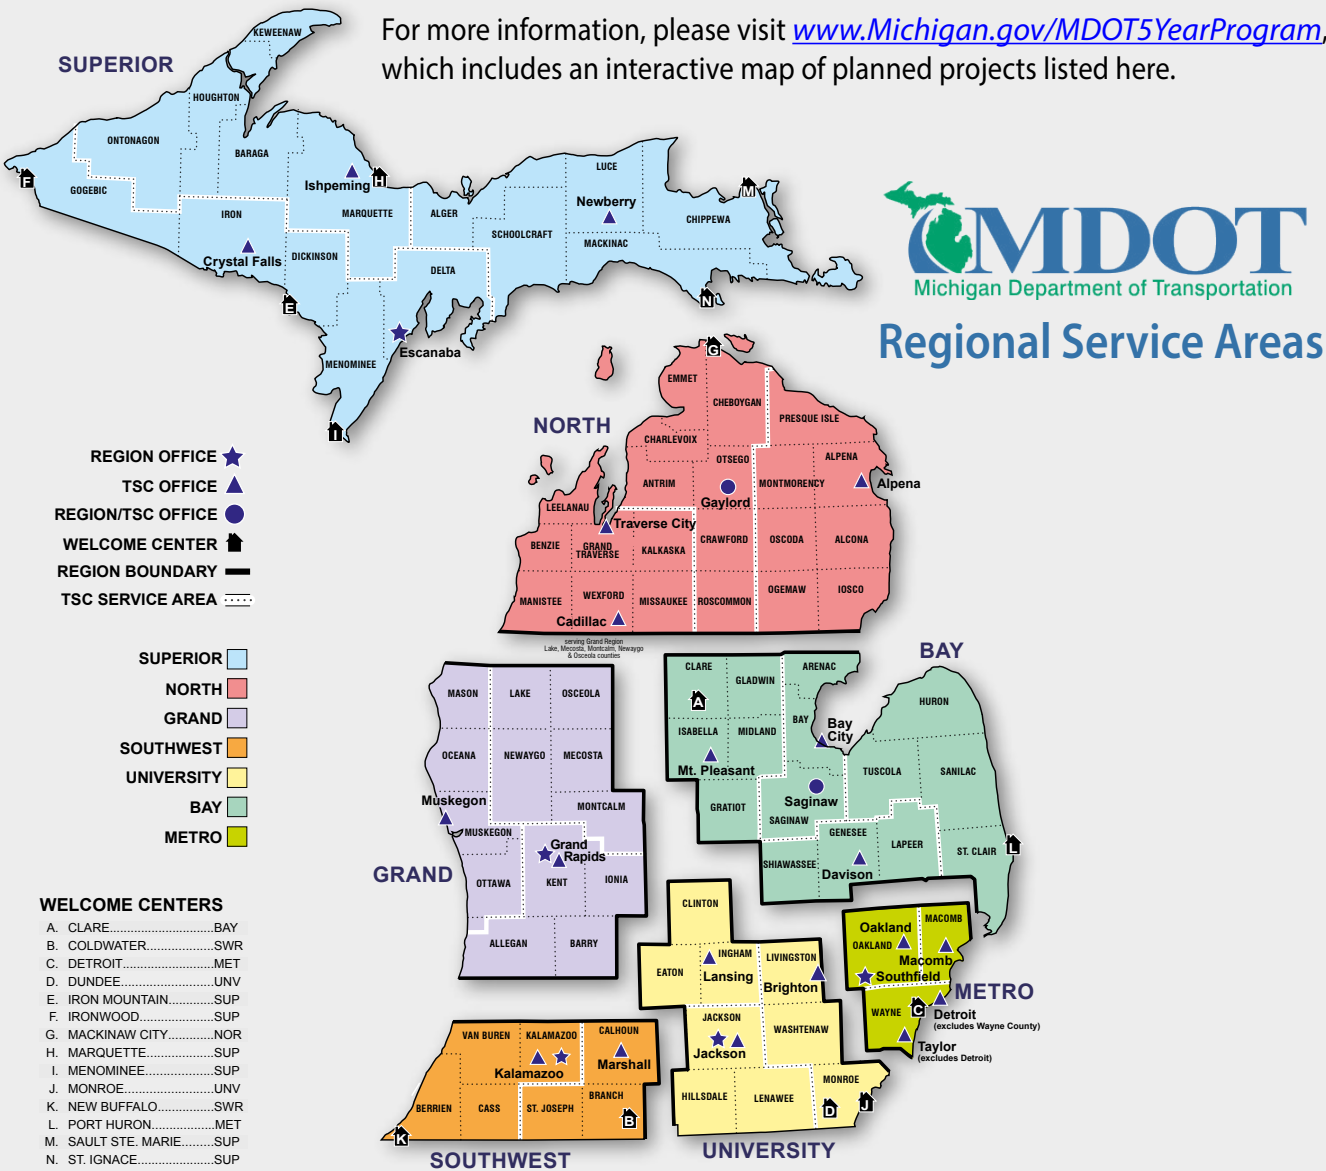

University Region

- One commenter was concerned about the number of injuries and deaths along US-12 between Saline and the Irish Hills.
- One commenter would like to see I-69 westbound repaired between Airport Rd and the Grand Rapids exit.
- One commenter was concerned about the proposed Diverging Diamond Interchange for I-94 and US-127 near Jackson.
- One commenter was concerned about the lack of projects planned for US-23 between Milan and I-94 due to the condition of the freeway.
- One commenter followed up on a comment submitted during a previous Five-Year Transportation Program public comment period regarding expanding M-59 in Livingston County from Oak Grove Rd to Old US-23.

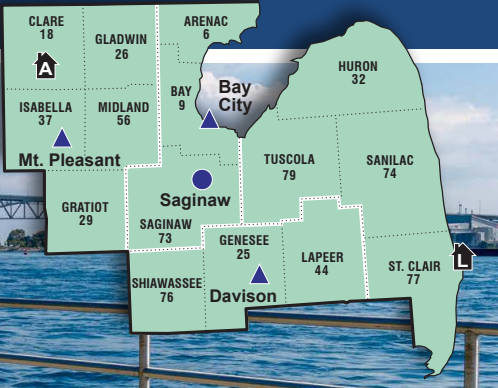

PROJECT LISTS

The following section contains a list of road and bridge projects, divided by MDOT region, to be constructed during FY 2021-2025. Projects funded with RBMP funds are highlighted for ease of reference.

For FY 2021 to 2024, the list includes 39 projects financed by the RBMP. Work began on seven projects in 2020 and are ongoing, for a total of 46 RBMP projects from FY 2020 to FY 2024. The total number of projects is lower than the original list of 49 due to the combination of select road projects into a single job to create administration and construction efficiencies, which took place in five instances. In addition, two projects were split into two separate job numbers for similar reasons. In the following list, some RBMP-financed road projects include many bridge structures and those rows will be highlighted as well, making the total number of bond projects appear to be higher.
