PROJECT AREA CONTAMINATION SURVEY (PACS), I-94 CORRIDOR ANN ARBOR TO DETROIT, MI

1.0 INTRODUCTION AND PURPOSE

WSP Michigan Inc. (WSP) has completed a Project Area Contamination Survey (PACS) of the approximately 40-mile long I-94 Corridor (Project Corridor) from Ann Arbor-Saline Road in Ann Arbor to just east of Trumbull Road in Detroit as shown on Figure 1 in Attachment A. This project proposes to equip the existing inside general-purpose lane with technology that supports Connected and Automated Vehicle (CAV) use. All proposed improvements to the roadway will occur within the existing highway footprint, and no project impacts are planned outside of the I-94 right-of-way.

The work for this PACS was completed by Adam Heft and reviewed by David VanGoethem. All activities were completed by an Environmental Professional, as defined in §312.10 of 40 CFR Part 312. Both individuals have the specific qualifications based on education, training, and experience to assess a corridor of the nature, history, and setting of the project.

The purpose of the PACS was to evaluate whether nearby and adjacent properties of environmental contamination could affect the project's design, cost, or schedule. The primary objectives in conducting this PACS were to: 1) inventory contaminated and potentially contaminated sites along the project alignment and boundaries; 2) determine the potential environmental risk (low, medium, high) of each site to construction activities; and 3) determine whether further evaluation of medium- and high-risk sites may be necessary based on potential worker safety issues and areas of potential contamination.

2.0 REGULATORY DATABASE REVIEW

Databases maintained by various state and federal agencies were reviewed for information regarding the Project Corridor and nearby properties. The compilation of data was performed by EDR. EDR searches governmental agency databases for information about contaminated properties and potentially contaminated properties within a specified search range buffer from the Project Corridor. EDR searched the databases at distances ranging from "target property" to one-quarter mile from the approximate Project Corridor limits for all databases. Information regarding the listed facilities, relevant to this project, is included in the EDR report in Attachment C.

When facilities were identified as being within the search distance, they were included and mapped in the EDR report. Numerous facilities in the EDR report are unmapped (referred to as "orphan" sites) due to an incomplete

address, an inaccurate address, or a street address that could not be accurately identified. Where possible, the locations of the unmapped sites were ascertained, and the potential impact of these sites was evaluated for this assessment. The databases deemed relevant by WSP generally included those that either indicate contamination is known or likely present, was once present and has been remediated, or where chemicals or waste are currently or formerly used, stored, generated, or disposed.

The EDR report identified 3,340 facility listings in various government databases within the established search distances. WSP evaluated the facilities identified in the EDR report by consolidating duplicative listings since numerous facilities were listed separately under different or slightly different names or addresses. In addition to the listed facilities, the EDR report also reported 900 “orphan” sites. WSP evaluated the orphan listings based on the location information provided (often an intersection, highway mile marker, or similar information) and the database of the orphan. This reduced the number of potentially relevant orphans to 84. Most of these orphans were spill incidents along the I-94 highway. WSP obtained the site reports for all of the orphans; only 17 of the 84 orphans site reports provided any information regarding the nature of the incident or listing. The database evaluation reduced the number of unique facilities to 594.

3.0 SITE RECONNAISSANCE

On May 3, 2023 WSP personnel conducted a windshield reconnaissance of the approximately 40-mile long Project Corridor. The goals of the reconnaissance were to: 1) confirm the location of the facilities identified in the EDR report and assigned a preliminary risk ranking by WSP of medium or high, and 2) identify whether other facilities of potential concern were present in close proximity to the Project Corridor that were not identified in the EDR report.

WSP initiated the reconnaissance at the west end of the Project Corridor at Ann Arbor-Saline Road and worked eastward, driving on the surface streets, and circling around in the areas where facilities were plotted on the EDR report maps. WSP drove along each of the surface streets that were close to I-94 and where commercial or industrial businesses were situated. After reaching the east end of the Project Corridor, WSP returned to the west end driving along I-94. During the reconnaissance, WSP identified one additional site that was not included in the EDR report, the Ford Clay Mine Landfill property, which is adjacent to the Project Corridor in Allen Park. This facility was noted on the maps and added to the table of sites of potential concern.

4.0 EVALUATION

4.1 ESTABLISHING RISK RATING

The purpose of the PACS screening is to provide a high-level assessment to help identify known or potential sources of contamination that exist or may exist within or in close proximity to the Project Corridor. A risk rating of High, Medium, or Low was assigned to each identified adjacent and nearby potential site of concern identified in the EDR report. Professional judgement is used to assign these ratings; however, the following general guidelines were followed:

HIGH RISK: High risk sites are facilities with known contamination that has likely impacted the Project Corridor and, therefore, will likely affect construction activities that entail ground disturbance. Examples could include open Leaking Underground Storage Tank (LUST) sites or other known contaminated sites, landfills, and unknown sites that have been identified as former heavy industrial areas, former gasoline stations with potential for underground tanks to be present, or areas where chemicals may have been buried. Some examples of land uses or conditions posing a high risk include automotive maintenance facilities, bulk oil facilities, chemical storage,

blending and manufacturing facilities, dry cleaning facilities, junk yards, landfills, metal plating shops, paint manufacturing, railroad yards, and industrial property with greater than 20 years of use or with apparent poor best management practices.

MEDIUM RISK: Medium risk sites are facilities where information obtained suggests that there is a reasonable chance that contamination exists that could affect the Project Corridor and possibly affect construction activities. These could include potential sites that have been identified as former gas stations, and processing or manufacturing facilities where there is little to no information available, or the limits of the known contamination are well defined and in close proximity to the Project Corridor. Some examples of land uses or conditions posing a medium risk to project cost, scope or schedule include ASTs, agricultural fields/crop dusting operations, debris laden fill, mines/quarries, and industrial property with less than 20 years of use or with apparent good best management practices.

LOW RISK: Low risk sites include facilities with known LUST and other adjacent underground sites that have been remediated and are officially closed with no use restrictions; small vehicle repair shops, and similar facilities that may have had small spills in the past; and some businesses that handle hazardous waste with no violations, no indications of improper management or disposal, or no obvious releases. These facilities likely represent a *de minimis* condition, which generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. This category could also include known or potentially contaminated facilities that are too distant from the Project Corridor to pose a material threat to project construction activities.

4.2 RESULTS

WSP assigned a preliminary risk rating prior to the site reconnaissance using the process described above. Some of the sites identified in the EDR report were identified in the field at a location other than that which they were plotted in the EDR report, consequently changing the risk ranking WSP originally assigned. Some sites were also identified to be large parcels for which the location was plotted at the “front door” of the facility several hundred feet from the Project Corridor, but the property was large enough for the facility to be immediately adjacent to the Project Corridor. The risk rating for these sites was therefore upgraded.

After completing the reconnaissance, WSP revised the list of facilities based on the above factors. Of the 595 facilities identified in the EDR report and during the field reconnaissance, none were assigned a high risk, 35 were assigned a medium risk, and the remaining 560 sites were assigned a low risk.

Figures 2-1 through 2-26 in Attachment A depict the location of all sites identified during the PACS. These facilities may be listed in multiple databases; the total number of listings, by database and within the respective search distance is depicted on Table 1 in Attachment B.

The table below summarizes the medium risk sites.

5.0 SUMMARY

WSP has completed a PACS screening of the I-94 Project Corridor from Ann Arbor-Saline Road to east of Trumbull Road in Detroit. The PACS identified 35 medium risk sites in close proximity to the Project Corridor; no high risk sites were identified. Medium risk sites are facilities where information obtained suggests that there is a reasonable chance that contamination exists that could affect the Project Corridor and possibly affect construction activities such as earth moving or excavation below about two feet below the existing ground surface, the installation of poles or signs that include removal of quantities of soil, trenching, or dewatering, if applicable. Preliminary Site Investigation (PSI) testing of the soil and/or groundwater within the Project Corridor may be warranted, depending on the nature and extent of subsurface work planned to be completed in the vicinity of these sites. PSI testing should be completed prior to commencement of any earth moving or construction activities.

Please let us know if you have any questions or need additional information regarding the submittal of this PACS.
Sincerely,

WSP Michigan Inc.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: Records Manager: Box 74 Sent to Lansing for Scanning: 1/15/16 Category Review:B1 BEA used soil sampling data from 2004 so contamination levels at facility today are unknown. NOTE: Spill from Wolverine Pipeline - Wick Road from 2004 is on this property and BEA noted that in August 2010 free product was in SB-11 but that groundwater sampling

Waste Code:	F011
Waste Description:	SPENT CYANIDE SOLUTIONS FROM SLAT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.
Waste Code:	F012
Waste Description:	QUENCHING WASTEWATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
Waste Code:	F019
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.
Waste Code:	F034
Waste Description:	WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE CREOSOTE FORMULATIONS. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.
Waste Code:	F035
Waste Description:	WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.
Waste Code:	F037
Waste Description:	PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.
Waste Code:	F038
Waste Description:	PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.
