

Project Designer Certification

A certified project designer prepares abatement project designs, occupant protection plans, and abatement reports.

How to get certified

- Meet the certification requirements:
 - ✓ Must be a certified lead abatement supervisor
 - ✓ A bachelor's degree in engineering, architecture, or related field; **OR** four years' experience in building construction design
- Pass a one-day project designer training course
- [Apply for state certification](#)

Other information you should know

- Certification must be renewed each year by paying a renewal fee and submitting a renewal application by March 31. Once certified, you must take a refresher course and the state exam every three years to retain certification status.
- Contact the Healthy Homes Section Certification Team at 1-866-691-5323 or by email at HHSInfo@michigan.gov.
