

HOUSING CHOICE VOUCHER (HCV) PROGRAM UNIT INSPECTION REQUIREMENTS

Beginning with inspections on or after July 1, 2024, MSHDA will be following the U.S. Department of Housing and Urban Development (HUD) National Standards for the Physical Inspection of Real Estate (NSPIRE) protocols for all inspections.

NSPIRE strengthens HUD's physical condition standards and improves HUD oversight by aligning and consolidating the inspection regulations used to evaluate "HUD housing" as defined in 24 CFR 5.701(c), across multiple programs. Implementation of the NSPIRE final rule ensures that residents of HUD housing live in safe, habitable dwellings. It also ensures that the items and components located both inside and outside, and within the units of HUD housing are functionally adequate, operable, and free of health and safety hazards.

NSPIRE will require some notable changes in what items are inspected, and additional levels or requirements within some existing requirements. Below we have identified a few major changes/updates for your reference.

Notable changes to unit inspections that occur on or after July 1, 2024:

Carbon monoxide (CO) detectors are required on every level of the unit. Any missing or inoperable CO detector will result in a life threatening 24-hour inspection deficiency.

If applicable, CO detectors are required in the following additional locations:

- 1) If your unit has a fuel burning appliance (gas or wood) and/or an attached garage, a CO detector is required in the immediate vicinity of sleeping rooms,
- 2) If the bedroom contains a fireplace or another fuel-burning appliance, a CO detector is required within the bedroom, and
- 3) If your unit is within a multi-unit building that has a garage attached, underneath or within any building, a CO detector is required in the immediate vicinity of sleeping rooms, even if units within the building are without fuel-burning appliances.

Smoke detectors are required on every level of the unit, inside each bedroom, and in the immediate vicinity of the sleeping rooms.

- Any missing or inoperable smoke detector will result in a life threatening 24-hour inspection deficiency, and
- Sealed batteries (or hardwired) will be required for all smoke detectors by **12/29/2024**.

Electrical:

- GFCI (Ground Fault Circuit Interrupter) outlet must be present within six feet of a water source (i.e., sink, bathtub, shower, water faucet, toilet) that is in the same room.
- All rooms for living must have either two working outlets or one outlet and one permanent light fixture, and
- Electric service panel must be reasonably accessible by tenant (i.e., cannot be reached and opened without moving obstructions, dismantling, destructive measures, or actions that may pose a risk to persons or property).

Hazards in rooms used for living:

- A damaged or blocked sprinkler system will result in a 24-hour inspection deficiency.
- Holes in walls if 2" or group of 6"x6".
- Sharp edges. Examples include broken glass, nails, uncapped toilet bolts etc. that may cause bodily harm.
- Cabinet drawers should have stops, and not have more than 25% missing or 50% damaged.
- Trip hazards: 3/4" vertical differential or 2" horizontal gap, damaged nosing on stairs or elevators.

Paint issues:

Lead based paint standards have been updated and apply to units built pre-1978 with a child under age 6 or a pregnant person living there or is expected to live there.

Exterior issues:

- Missing guardrail is a 24-hour inspection deficiency.
- Missing or inadequate signage, such as building numbers or address.
- Roof if substrate is exposed or has holes.
- Fire doors must function as designed.
- Litter: more than 10 small items in 10x10 area, 1 person for 1 hour to pick up, and large items.
- Potholes.

Attached you will also find an NSPIRE Inspection Checklist and list of life-threatening deficiencies. The NSPIRE Inspection checklist provides a general guide of what to expect during inspections of HCV units but may not include all inspection deficiencies.
