

Michigan Public School Employees'

Retiree Health Actuarial Valuation
Results as of September 30, 2022

Retiree Health Benefits

The Funding Issue

- Unlike pensions, health benefits have not been pre-funded for a long period of time
 - Most plan sponsors nationwide have not pre-funded health benefits either
- Costs rise as more members retire, and health inflation usually outpaces general inflation
- Pre-funding contributions have been calculated since 1999 – but full pre-funding started in Fiscal Year (FY) 2013

September 30, 2022 Valuation

- Purpose of the September 30, 2022 valuation is twofold:
 - Determines the actuarially computed employer contribution for FY 2025
 - Measures the retiree health plan's funding progress
- Computed liabilities are net of any expected retiree paid premiums required to receive retiree health benefits
- Reflects 3% of payroll active member contributions required to participate in the defined benefit retiree health program

September 30, 2022 Valuation

- Reflects the Dedicated Gains Policy adopted by the Board of Trustees
 - Starting with the September 30, 2021 funding valuation, in accordance with modifications to the Dedicated Gains Policy, the Policy cannot lower the investment return assumption below 6.00%
 - Investment return assumption remained at 6.00% as a result of the Policy
- Reflects plan changes resulting from Public Act 300 of 2012

September 30, 2022 Valuation

- Actuarially computed employer contributions included in this presentation do not incorporate the “contribution floor” provisions of Public Act 181 of 2018 or Public Act 92 of 2017
- Reflects payroll growth schedule for amortization purposes dictated by Public Act 220 of 2022 (0.75% payroll growth for determining FY 2025 contribution)
- Actuarially computed employer contributions in this presentation are needed in addition to any reconciliation payments as required by subsection 41(9) of MPSERS statute

FY 2022 – Expenditures vs. Contributions

- FY 2022 expenditures for employer paid retiree health care benefits:
 - \$ 555.5 million
 - The following are netted off the amount shown above:
 - Retiree paid premiums
 - Other governmental contributions of \$251.6 million
- FY 2022 contributions for retiree health care benefits:
 - \$ 771.6 million – Employer contributions
 - Other governmental contributions of \$251.6 million are not included in the amount shown above
 - \$ 205.6 million – Employee contributions

Actuarially Computed Employer Contribution FY 2025 (\$ in Millions)

- Actuarially computed employer contribution for FYE September 30, 2025:

	<u>FY 2025</u>
Employer Normal Cost	\$ 65.3
Amortization of UAAL ¹	<u>0.0</u>
Actuarially Computed Employer Contribution	\$ 65.3

¹ *Unfunded Actuarial Accrued Liabilities (UAAL) were amortized over 14 years from October 1, 2024.*

- If an amortization payment is not required to finance a UAAL, the annual employer contribution requirement decreases to the normal cost contribution

Actuarial Gain/(Loss) (\$ in Millions)

	<u>Gain/(Loss)</u>
1. Premiums. Gains and losses resulting from actual premiums in valuation year versus that assumed from prior valuation.	\$ 1,569.0
2. Investment Income. If there is greater investment income than assumed, there is a gain. If less income, a loss.	(188.1)
3. Demographic and Other. Gains and losses resulting from demographic experience, data adjustments, timing of financial transactions, etc.	82.1
4. Composite Gain/(Loss) During Year.	<u>\$ 1,463.1</u>

Circumstances That Would Increase Projected Costs

- Medicare funding reductions or cost shifting
- Unexpected new benefit recipients (from health benefit cutbacks of other employers)
- Medical inflation worse than assumed; the actual future contributions will depend on future per capita health cost increases (health inflation)*
- Active member population decline (contribution rates as a percentage of payroll would increase)
- Lower than expected investment returns; bigger impact for well funded plans
- This is not a complete list

* *Pre-65 per capita costs are projected to increase 7.50% the first year (6.25% for post-65 per capita costs), graded down to 3.5% in the fifteenth year.*

Retiree Health Assets & Accrued Liabilities

Full Actuarial Funding (\$ in Millions)

- (1) Change in assumptions for years where assumptions other than the trend assumption changed. Beginning with the September 30, 2021 valuation, results as of the same valuation date prior to the assumption change reflect expected trend from the prior year's valuation.
- (2) Actuarial value of assets were equal to the market value of assets prior to 2018.

Unfunded Accrued Liabilities as %'s of Payroll Full Actuarial Funding

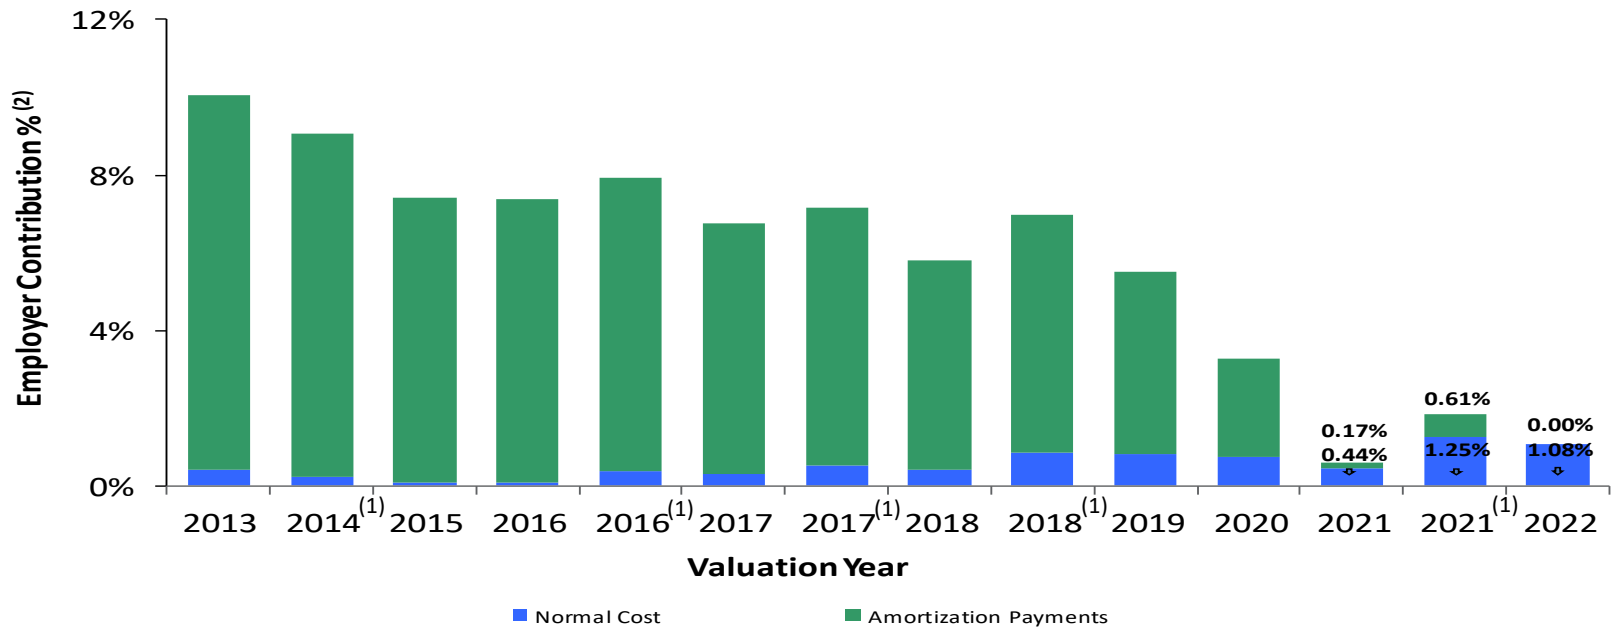

(1) Change in assumptions shown for years where assumptions other than the trend assumption changed. Beginning with the September 30, 2021 valuation, results as of the same valuation date prior to the assumption change reflect expected trend from the prior year's valuation.

(2) Percentage of total MPSERS payroll (including both PHF and non-PHF members).

Actuarially Computed Employer Contributions as %'s of Payroll (Full Actuarial Funding)

- (1) Change in assumptions shown for years where assumptions other than the trend assumption changed. Beginning with the September 30, 2021 valuation, results as of the same valuation date prior to the assumption change reflect expected trend from the prior year's valuation.
- (2) Note the following, (a) the normal cost is expressed as a percentage of non-PHF active member payroll, (b) the Amortization Payment is expressed as a percentage of total MPSERS active member payroll (including PHF and non-PHF), and (c) the required employer contribution is for the fiscal year beginning two years after the valuation date.

Funded Ratio

(1) Change in assumptions shown for years where assumptions other than the trend assumption changed. Beginning with the September 30, 2021 valuation, results as of the same valuation date prior to the assumption change reflect expected trend from the prior year's valuation.
