Re: Wolverine World Wide, Inc. Consent Decree Court Case No. 1:18-cv-00039
GSI Investigation Summary and Work Plan

Dear Ms. Vorce:

In response to EGLE's October 7, 2021, Notice of Approval with Conditions of the Groundwater-Surface Water Interface Investigation Summary and Work Plan, Rose & Westra, a Division of GZA GeoEnvironmental, Inc. (R&W/GZA), submits this letter and attached Work Plan on behalf of Wolverine World Wide, Inc. (Wolverine) under Section 7.10(b) and Appendix S of the Wolverine Consent Decree (W.D. Mich. Case No. 1:18-cv-39).

1. Section 2.1 Groundwater Flow:

a. *Please reevaluate the stratigraphy, well construction and shallow screened interval for borehole/MW-14 to confirm the groundwater elevation, and whether this monitoring well and groundwater elevation is appropriately categorized in relation to other "shallow zone" monitoring wells.*

i. *<u>JUSTIFICATION:</u> The shallow groundwater flow interpretation in the Wolven-Jewell area is strongly skewed due to data originating from MW-14 and may not accurately depict localized downgradient flow within the area at monitoring stations Area 19-GSI-2 and Area 19-GSI-3. MW-14 is isolated with the nearest monitoring wells, MW-10, MW-12, and MW-13, located approximately 3,500 feet away. Figure 1 depicts groundwater elevation contours from the shallow zone using data acquired in November 2019. A distinct groundwater high (861.25' amsl), centered proximal to monitoring well MW-14 also corresponds to a topographically high zone in the area. The digital elevation model (DEM) available for the area shows a distinct NE-SW trending linear feature, possibly corresponding to a moraine.*

Response: Monitoring well MW-14 is likely screened in the perched groundwater zone and the groundwater elevation data collected from MW-14 may not represent groundwater elevation in the shallow aquifer. We have revised the groundwater contours by removing the groundwater elevation at MW-14 during contouring. See the revised **Figure 1**.

2. Section 6.0 Pore-Water Sampling:

a. *Please revise the work plan to include as an appendix any available field logs or supporting documentation related to the collection of the pore water samples.*

i. *JUSTIFICATION: Use of pore-water sampling devices such as the Mark Henry push-point probes (discussed in Section 6.0) are considered as Alternative Monitoring Points, Section 7.5 of Groundwater-Surface Water Interface Pathway Compliance Options (April 2018), by EGLE, and accepted under various conditions, including that:*

> *"Documentation that the alternative samples are representative of venting groundwater in the transition zone through an evaluation of hydraulic head conditions and of the water sample geochemistry (e.g., static water levels, temperature, dissolved oxygen, conductivity, etc.) are appropriate. Static water levels higher than the elevation of the surface water body are indicators of conditions where groundwater vents to the surface water. Typical geochemical ranges or thresholds are not readily available. A site-specific lines-of-evidence proposal would be appropriate to support the determination that the sampling location is representative of the venting groundwater."*

As such, it is important that GZA demonstrate that pore-water samples "are representative of venting groundwater in the transition zone" rather than being surface water samples (i.e., potentially diluted, and non-representative). Additional lines of evidence supporting venting groundwater being groundwater and not surface water include geochemical signatures and general characteristics (e.g., major cations and anions, along with conductivity, temperature, etc.).

Response: The pore-water field sampling process is already documented in **Section 6.0** of the GSI Work Plan (WP). GZA used a manometer prior to measuring the geochemical data (described below) to confirm if there was a positive hydraulic gradient between the pore-water sample interval and surface water. The pressure and geochemical data documented on field worksheets (Appendix B) are summarized on Tables 3A through 3C. The pore-water geochemistry data compared to river water readings demonstrated an average of 70 percent difference (maximum value 1,217 percent difference) in Oxidation Reduction Potential and average 175 percent difference in Dissolved Oxygen levels between river water and pore-water samples.

3. Section 7.1 Sampling Locations – Figure 6C - Pore Water Sampling Worksheets:

a. *Please revise the work plan to accurately document the screen interval for the pore water - Henry sampler screen intervals for each boring location in report text, tables, and/or worksheets (purge logs).*

i. *EXAMPLE: The worksheet for HS-PW-3.5A lists water depth at 1.5 ft and the sample screen interval at 10-14 (didn't identify feet or inches) below the water surface. Figure 6C and Table 7.1.2 in the text list the sample collected at 0.83- 0.96 ft.*

ii. *EXAMPLE: The WV/CH-PW-1(A) worksheet lists the water depth at 3 inches and the sample screen interval below water surface at 9 inches. This means the sample would be 6 inches into the sediment but the text table lists 0.75 -0.88 feet. Also, the water depth identified at HS-PW-9 was 7 inches and the sample screen interval below water surface was 12 inches. This seems to indicate the sample was at 5 inches into the sediment which is too close to the surface water for an accurate result. The table and figure show the sample screened interval at 1.0-1.13 feet.*

Response: Screen intervals for the pore water were documented in Section 7 of the WP. Additional clarification has been added to the WP text regarding the Henry sampler screen intervals for each pore-water location. Field sampling worksheets (Appendix B) have been modified to cross off incorrect measurement referencing "(ft) (below water surface)". Water depth was not taken into measurement for the sampler screen interval depth. Documented depths as written on field worksheets were in inches to the top of the sampler screen interval and measured from the river bottom, also referred as "top of sediment". The depth in inches was converted to feet and the complete sample interval including sample screen length (.13 ft) was provided in Table 7.1.2 of the WP.

4. Section 9.0 Site Sampling Results:

a. *Please revise the work plan to provide a table of the results identified on the field sheets/pore water sampling worksheets (purge logs) along with the results collected from the river. The worksheets themselves should be included as an appendix of the report.*

Response: Refer to response in ***Section 6.0 Pore-Water Sampling***. Field sampling worksheets have been added to the report as Appendix B.

5. Section 11.2 Proposed Monitoring Locations:

a. *Please revise the work plan to relocate WVNW-MW-202 to the edge of the bluff at a latitude between Bay Harbor Court and Nantucket Court to determine the potential for contaminants to discharge to the wetland that hydraulically precedes the Rogue River. Proposed location WVNW-MW- 202 appears to be located either in a wetland, or between two wetlands. EGLE understands this area to be an oxbow of the Rogue River where flooding regularly occurs. Note that wetlands are defined as "Waters of the State" and should be considered as GSI receptors.*

b. *Please revise the work plan to add a proposed GSI monitoring well to straddle the water table near well cluster MW-7S/M. This well cluster could and should be part of the future GSI groundwater monitoring program as discussed on page 9 of the text. This would limit the profiling necessary at this location since MW-7S and MW-7M already provide the vertical definition.*

c. *Please revise the work plan to add a proposed GSI monitoring well near the northeast end of the fishponds located upgradient of the proposed HS- MW-261.*

Response: Comments are addressed on Figures 6A and 6C. WVNW-MW-202 has been relocated to the bluff between Bay Harbor Court and Nantucket Court. WVNW-MW-203 has been added adjacent to existing well cluster MW-7S/M. HS-MW-266 is located at the northeast end of the Department of Natural Resource fishponds located upgradient of the proposed HS- MW-261 well cluster.

6. Section 16.0 Anticipated Schedule:

a. *The table provided in this section outlines a 6- to 7-month timeframe for the tasks in the work plan, however the following text notes that the tasks "will require 17 months to complete drilling, VAP, and installation of proposed monitoring wells." Please clarify this discrepancy. EGLE views the 6- to 7-month timeframe as reasonable and achievable and would not support a 17-month timeframe for work plan implementation.*

Response: The implementation schedule provided in the WP was discussed with EGLE on a conference call held October 10, 2021, after which EGLE agreed that the 17-month timeframe for completion of drilling, VAP analysis, and installation of the proposed monitoring wells is not unreasonable. Further clarification has been added to the WP text indicating the estimated timeframe tables specifies the timeframe sequence per location. While there is expected to be overlap between tasks based upon available access, the timeframe for drilling, VAP analysis, and installation of the proposed 19 GSI monitoring wells is estimated to be 17 months.

7. Figures:

a. *Please revise the work plan to include plan view and cross-section figures depicting per- and poly-fluoroalkyl substances (PFAS) plumes in groundwater in relation to the GSI monitoring devices and the surface water receptor.*

i. <u>JUSTIFICATION:</u> The overall purpose of the GSI Investigation Study and Work Plan is to evaluate the PFAS footprint in relation to the GSI pathway (Section 3.0). However, the document does not include depictions of the localized PFAS plumes in groundwater in relation to the GSI monitoring devices, including pore-water samplers, GSI wells and/or other dedicated piezometers.

Response: The approximate vertical extent of Total PFAS detections has been added to cross section Figures 3A through 3C. Plan view of the cross section transects is provided on Figure 3 and each respective Figure overview map.

If you have any questions, please contact us. Thank you.

Very truly yours,

Rose & Westra, a Division of GZA GeoEnvironmental, Inc.

1.0 INTRODUCTION

On behalf of Wolverine, R&W/GZA prepared this revised Investigation Summary and WP for the GSI RAP in the NKSA. The GSI RAP was prepared pursuant to Sections 7.4, 7.10 (a) and Appendix S of CD No. 1:18-cv-00039-JTN-SJB, effective February 19, 2020. Specifically, this Investigation Summary and WP is established in Section 7.10(b) of the CD and the approved GSI RAP dated September 23, 2020. This revised Investigation Summary and WP is submitted in response to EGLE's Notice of Approval with Conditions of the Groundwater-Surface Water Interface Investigation Summary and Work Plan dated October 7, 2021.

The objective of the GSI RAP was to investigate potential environmental risks related to surface water quality resulting from the GSI pathway in the Rogue River. The GSI investigations are specific to regulated PFAS in groundwater, originating from the HSP and the Wolven/Jewell area. As established in Paragraph 7.10(a) and Appendix S of the CD, Wolverine will study the potential for groundwater contamination to discharge to surface water at the following three areas: "(i) southeast of the House Street plume(s); (ii) from the Wolven/Jewell plume(s) and the House Street plume(s) to the northwest; and (iii) from the Wolven/Jewell plume(s) toward the Rogue River to the northeast and southeast."

As set forth in the approved GSI RAP, the three broader areas in the CD were further refined based on conceptual understanding of groundwater flow and potential surface water discharge areas in the HSP and Wolven/Jewell study areas at the following six locations:

1. Downgradient of the HSP to the southeast;
2. Downgradient of the HSP to the south,
3. Wolven northwest;
4. Downgradient of the HSP to the northwest;
5. Wolven northeast; and
6. North Childsdale.

2.0 CONCEPTUAL SITE MODEL

Based on interpretation of regional geology and hydrogeology, residential water well sampling data in the NKSA, and groundwater investigations performed associated with the HSP and Wolven/Jewell areas, a CSM was provided in the 2020 GSI RAP (R&W/GZA, 2020). Data collected during the implementation of GSI RAP activities supports the CSM. An updated interpretation of groundwater flow has been included based upon GSI investigation to date.

2.1. GROUNDWATER FLOW

Based on the last monitoring well network gauging and sampling event (November 2019 data set), groundwater elevation contours were interpolated from the static water level data. See **Figure 1** for the groundwater elevation contours in the shallow zone and **Figure 2** for the deep zone. Groundwater contours in Cross-sections A-A' (downgradient of the HSP), B-B' (Wolven Northwest) and C-C' (Area 19) were interpreted and plotted in **Figures 3A**, **3B** and **3C**. Groundwater flowlines to the approximate centerline of the Rogue River were interpreted. Considering groundwater flow on the other side of the Rogue River also discharges to the Rogue River and the

flow pattern on either side of the river is generally symmetrical, the groundwater flowline to the Rogue River centerline approximately represents the lower envelope of the vertical groundwater flow discharge zone. The interpreted groundwater table, also a groundwater flowline, represents the upper envelope of the vertical groundwater flow discharge zone.

3.0 GSI RAP OBJECTIVES

The purpose of the GSI RAP investigation was to further evaluate PFAS at the GSI. The data collected under the GSI RAP and summarized in this Investigation Summary include samples collected in the vicinity of identified potential surface water discharge areas for the PFAS-containing groundwater in the HSP and Wolven/Jewell study areas.

The investigation of GSI is necessarily iterative. To fulfil the obligation under the CD to study the potential for groundwater contamination from the HSP to discharge to surface water, additional investigation is needed as set forth in this WP. In particular, in evaluating the potential risks to the Rogue River, this GSI WP builds on the work done to date and is intended to continue in the understanding of the following areas:

- Groundwater elevation at the GSI,
- Gradient and flux at the GSI, and,
- PFAS compound concentrations in the groundwater discharging to the Rogue River.

The following sections provide an investigation summary of activities completed to satisfy the project objectives required by Paragraph 7.10(a) and Appendix S of the CD as well as the GSI RAP. Furthermore, as established in Section 7.10(b) of the CD, **Section 11** of this report provides location recommendations for permanent GSI monitoring wells and sets forth the monitoring program.

4.0 INVESTIGATION METHODOLOGY

4.1. PIEZOMETER INSTALLATION

In accordance with general procedures outlined in the GSI RAP, stainless steel, 1.25-inch temporary piezometers were hand-driven via fence post driver into the groundwater on the riverbank. The 4-foot stainless steel screens were threaded to galvanized riser pipe as they were driven below grade. The top of the well screen was driven to an approximate depth of 3 feet below the bottom of the river sediment, where possible.

The top of the piezometer was installed above the estimated flood elevation based on observations of vegetation and deposition in each of the locations. An approximate 6- to 12-inch bentonite seal was placed within the borehole over the screen. A 2-inch thick concrete pad was constructed at the surface of the piezometer to prevent infiltration and subsidence of the piezometer casings. An elevational survey collected by a Licensed Professional Surveyor[1] was conducted upon completion of the piezometer installations. Survey data as well as construction information including screen depths and approximate distance to surface water are provided on **Table 1.** A general construction schematic of installed piezometers is depicted in **Appendix A.**

[1] Survey completed by State of Michigan licensed professional surveyor, Exxel Engineering Inc., on November 6, 2020.

The following GSI piezometers were installed in each study area:

- **HSP Study Area** (Nine locations)
  - Southeast downgradient of the HSP along the Rogue River
    i. HS-GSI-1 through HS-GSI-5
  - Downgradient of the HSP near the Grand River
    i. HS-GSI-6 through HS-GSI-8
  - Northwest of the HSP
    i. HS-GSI-9
- **Wolven/Jewell Study Area** (Five locations)
  - Downgradient of Wolven Northeast plume within the Rogue River
    i. Area19-GSI-1 through Area19-GSI-3
  - Downgradient of the northwest portion of the Wolven/Jewell plume along the Rogue River
    i. WVNW-GSI-1 and WVNW-GSI-2
- **Wolven/Childsdale Study Area** (Two locations)
  - North Childsdale area, downgradient of the Wolven study area
    i. WV/CH-GSI-1 and WV/CH-GSI-2

5.0 GROUNDWATER AND SURFACE WATER GAUGING

Prior to pore-water sampling, water levels were collected from the newly installed piezometers and network of staff gauges. As established in the GSI RAP, a minimum of two weeks of piezometer and staff-gauge measurements were made to establish groundwater flows to the surface water. An additional week of groundwater gauging levels were completed based upon weather conditions and schedule prior to pore-water sampling; data was collected three times/week for three weeks. Nine groundwater gauging events were completed starting November 9 through November 27, 2020.

Existing staff gauges of the Rogue River were utilized for water level comparison and groundwater flow evaluation in the following locations in the Rogue River:

- Rockford Dam Seawall;
- East Bridge Street Bridge;
- Rogue River Road Bridge; and
- Jericho Avenue Bridge

The water levels measured from these locations were used in combination with USGS gauging station, USGS04118500, to evaluate surface water levels in the Rogue River.

Additional staff gauge locations (11 Mile Bridge, Algoma Avenue Bridge, and 12 Mile Bridge) were added to pair with piezometer locations where existing staff gauges were not present. The gauging measurements were

determined to demonstrate general groundwater flow toward the Rogue River. Groundwater and surface water gauging data and associated elevations are provided on **Table 2**.

GSI piezometers and staff gauge locations are provided on **Figure 4.** The locations in each study area are further detailed on **Figures 4A** through **4C**.

6.0 PORE-WATER SAMPLING

Pore-water sampling was conducted in accordance with procedures outlined in SOP A27/GSI RAP. A Henry Tube Sampler (i.e., stainless-steel probe) with 1.5-inch slotted screen was pushed into the sediment at discrete depths within the river bottom. A shallow-sample interval (minimum of 12 inches below the river bottom) and a deep-sample interval (minimum 6 inches below the shallow interval) were attempted at each pore-water sample location. Once the Henry Tube was pushed to depth for the shallow-sample interval, a vacuum gauge device (manometer) was connected to the Henry Tube and a peristaltic pump was used to draw water from the pore space. A second length of tubing was connected to the opposite side of the manometer in which river water was drawn into the tubing. A system of valves were closed to compare the pressure of pore-water to that of the river water. A higher gradient pressure within the pore-water tubing indicated that up-welling was occurring within the pore space and the pore-water was distinguishable from surface water. Upon confirmation, the manometer was removed and a multiparameter meter with a flow-through cell was connected to the Henry Tube sampler.

R&W/GZA collected pH, temperature, conductivity, dissolved oxygen, and ORP from the river water which was then compared to the real-time readings of pore-water. This was an additional confirmation tool indicating pore-water, not surface water, was being drawn through the sample device. Pore-water readings were considered distinguishable from the river readings when the variance was greater than 10% difference for collected parameters from the multiparameter meter, with the exception of temperature. Following the stabilization of parameters, the flow-through cell was disconnected, and pore-water was pumped directly into laboratory-provided sampling containers. The difference between pore-water and surface water geochemistry demonstrates the pore-water samples did not have significant surface water intrusion; refer to Tables 3A and 3B. Monitoring well geochemistry data is provided on Table 3C. **Section 7.3** further details laboratory sample analysis.

As described in the GSI RAP, pore-water samples were collected from the following locations in each study area:

- **HSP Study Area**
  - Nine pore-water sampling locations (HS-PW-1 through HS-PW-9), southeast downgradient of the HSP plume along the Rogue River
  - Two pore-water sampling locations (HS-PW-10 and HS-PW-11), northwest of the HSP
- **Wolven/Jewell Study Area**
  - Four pore-water sampling locations (WVNW-PW-1 through WVNW-PW-4) immediately downgradient of the Wolven northwest plume, along the Rogue River
  - Seven pore-water sampling locations (Area19-PW-1 through Area19-PW-7) downgradient/northeast of the Area 19 plume within the Rogue River
- **Wolven/Childsdale Study Area**
  - Six pore-water sampling locations (WV/CH-PW-1 through WV/CH-PW-6) downgradient to the southeast of the Wolven study area

Figure 5 summarizes pore-water sample locations in the NKSA.

6.1. GROUNDWATER SAMPLING

As identified in the GSI RAP, existing well clusters HS-MW-19S/D and HS-MW-29A (located hydraulically downgradient of the House Street plume) and one existing well installed by EGLE (DEQ-MW-9 well series) were sampled concurrently during the pore-water sampling event. Newly installed piezometers (Area19-GSI-1, Area19-GSI-2, and Area19-GSI-3) were also sampled during the pore-water sampling event. Piezometer sampling was conducted in general accordance with procedures outlined in SOP A29.

6.2. RE-SAMPLE EVENT

While not part of the GSI RAP, additional pore-water samples were collected to better delineate PFAS concentrations detected in HS-PW-3, located at the southeast downgradient portion of the HSP plume. A sample was advanced directly adjacent to the original HS-PW-3 location (HS-PW-3R). HS-PW-2.5 was advanced approximately 130 feet upstream of HS-PW-3. HS-PW-3.5 was advanced 480 feet downstream of HS-PW-3. The re-sample event was completed eight weeks after the initial sample location. Samples were collected following the previously identified procedures.

7.0 SAMPLING AND ANALYTICAL PROCEDURES

7.1. SAMPLING LOCATIONS

As discussed in **Sections 4.0** and **6.0**, the following GSI piezometer, monitoring well, and pore-water samples were collected:

Table 7.1.1 Sampled GSI Piezometers and Monitoring Wells

Area of Investigation	Piezometers	Wells
Southeast downgradient of the HSP plume along Rogue River	Out of scope for current investigation	HS-MW-19S/D and HS-MW-29A
Downgradient of Wolven northeast plume within the Rogue River	Area19-GSI-1 through Area19-GSI-3	One EGLE well (DEQ-MW-9 well series)

Table 7.1.2 Pore-Water Sample Locations

Area of Investigation	Sample I.D.	Pore-Water (ft)[1] Screen Depth	
		Shallow (A)[2]	Deep (B)[3]
Southeast downgradient of the HSP plume along Rogue River	HS-PW-1	2.00 - 2.13	2.50 -2.63
	HS-PW-2	1.00 - 1.13	NS
	HS-PW-2.5	0.50 - 0.63	1.00 - 1.13
	HS-PW-3	1.33 - 1.46	NS
	HS-PW-3R	0.50 - 0.63	NS
	HS-PW-3.5	0.83 - 0.96	NS
	HS-PW-4	0.75 - 0.88	NS

Area of Investigation	Sample I.D.	Pore-Water (ft)[1] Screen Depth	
		Shallow (A)[2]	Deep (B)[3]
	HS-PW-5	1.33 - 1.46	NS
	HS-PW-6	1.00 - 1.13	NS
	HS-PW-7	1.50 - 1.63	NS
	HS-PW-8	1.00 - 1.13	NS
	HS-PW-9	1.00 - 1.13	NS
Northwest of the HSP	HS-PW-10	5.00 - 5.13	NS
	HS-PW-11	4.50 - 4.63	NS
Downgradient of Wolven Northeast plume within the Rogue River	Area19-PW-1	1.00 - 1.13	NS
	Area19-PW-2	1.00 - 1.13	1.42 - 1.54
	Area19-PW-3	1.00 - 1.13	NS
	Area19-PW-4	1.00 - 1.13	1.42 - 1.54
	Area19-PW-5	1.00 - 1.13	NS
	Area19-PW-6	1.50 - 1.63	2.00 - 2.13
	Area19-PW-7	5.00 - 5.13	NS
Downgradient of the northwest portion of the Wolven/Jewell plume along the Rogue River	WVNW-PW-1	3.00 - 3.13	4.00 - 4.13
	WVNW-PW-2	2.33 - 2.46	3.33 - 3.46
	WVNW-PW-3	1.50 - 1.63	NS
	WVNW-PW-4	1.67 - 1.79	NS
North Childsdale area, downgradient of the Wolven study area	WV/CH-PW-1	0.75 - 0.88	NS
	WV/CH-PW-2	0.75 - 0.88	NS
	WV/CH-PW-3	1.00 - 1.13	NS
	WV/CH-PW-4	1.00 - 1.13	NS
	WV/CH-PW-5	0.83 - 0.96	NS
	WV/CH-PW-6	1.00 -1.13	2.00 - 2.13

[1] – Measured in feet below the ground surface of the river bottom
[2] – "A" represents the shallow interval sample collected at each location which was advanced to a minimum of 12-inches below the sediment where conditions allowed.
[3] – "B" represents the deep interval sample collected at each location which was advanced to a minimum of 6-inches below the shallow sample where conditions allowed.
NS – Not Sampled. See **Section 7.2**, Sampling Deviations

7.2. GSI RAP SAMPLING ADJUSTMENTS

The intervals at which samples were collected were based upon the results of the vacuum-gauge device and confirmation of up-welling groundwater gradient at each location. In some sample locations, the shallow intervals were at depths greater than 12 inches due to unconsolidated sediment which did not create an adequate seal between pore and river water. The Henry Tube sample device was pushed deeper into the pore space until the vacuum gauge could confirm that pore-water was being collected through the sampling device and river water was not being short circuited.

Subsurface conditions (rocky substrate, refusal, etc.) did not allow for the collection of the deep interval at every location. Refusal or inadequate groundwater gradient prevented the sampling deeper intervals at 23 pore-water sampling locations. Proposed pore-water sample locations in the study area northwest of the HSP (HS-PW-10 and HS-PW-11) were required to be moved further downstream. Impassable conditions of the Rogue River combined with limited private landowner access made the locations established in the GSI RAP inaccessible. Following discussion with and approval of EGLE, these locations were shifted to be located upstream and downstream of GSI piezometer HS-GSI-9. Pore-water and monitoring well sampling worksheets are provided in **Appendix B**. Sampler Screen Interval provided on pore-water worksheets is the measured depth from the top of the sediment surface to the top of the sampler screen. The approximate screen length of the Henry Tube Sampler (.13 ft or 1.5 inches) is included in the total Pore Water Screen Depth interval of *Table 7.1.2*, measured in feet.

7.3. ANALYTICAL METHOD AND PARAMETERS

The samples were analyzed for PFAS using DoD QSM 5.3 guidelines for PFAS by isotope dilution methodology. The analyte list included the 28 PFAS compounds specified in the CD, and reporting limits are provided in Table A.7.7 of the project-specific QAPP.

8.0 GSI AND APPLICABLE RULE 57 WATER QUALITY STANDARDS

The potential environmental exposure pathways for impacted surface water in the Rogue River and applicable Part 4 Rule 57 Water Quality Values are identified as follows:

- Human exposure via non-drinking water exposure route – Rule 57 HNDV;
- Aquatic life exposure to impacted water in the Rogue River – Rule 57 FCV; and
- Wildlife exposure to impacted water in the Rogue River – Rule 57 WV.

Parameter	Units	HNDV	FCV	WV
PFOA	ng/L	12,000	880,000	Not Applicable
PFOS	ng/L	12	140,000	Not Applicable

The human health drinking water value is not applicable to this GSI investigation. Rather, the applicable criteria are the generic GSI criteria, which are the lesser of HNDV, FCV, and WV. The GSI criteria are derived using surface-water concentrations, but for the purpose of this evaluation they will be used for the evaluation of pore-water data to aid in evaluating compliance at the surface water compliance point. This does not imply that GSI criteria are necessarily applicable to the pore-water concentrations.

Compound	Threshold Value (µg/L)	Basis for Value
PFOA	12	GSI
PFOS	0.012	GSI

9.0 SITE SAMPLING RESULTS

The following section summarizes the analytical results from groundwater and pore-water collected during the investigation activities. During pore-water sampling and the concurrent groundwater sampling event, samples were collected from a total of 46 locations. Of those 46 locations, 0 samples exceeded GSI criteria for PFOA

(12,000 ng/L). For PFOS, 32 samples were greater than the GSI criteria (12 ng/l). Likewise, for PFOS, 14 samples were less than 12 ng/l or were non-detect in laboratory analysis. The PFOS concentrations are further described by each area:

- **HSP Study Area (South/Southeast, downgradient of the HSP plume along Rogue River)**

>12 ng/L	HS-PW-2.5A, HS-PW-2.5B, HS-PW-3A, HS-PW-3B, HS-PW-3A, HS-PW-3B, HS-PW-3.5A, HS-PW-3B, HS-PW-4, HS-PW-5, and HS-PW-8
<12 ng/L	HS-PW-1A, HS-PW-1B, HS-PW-2, HS-PW-6, HS-PW-7, and HS-PW-9

- **HSP Study Area (Northwest of the HSP)**

Non-Detect	HS-PW-10, and HS-PW-11

- **Wolven/Jewell Study Area (downgradient of the Wolven Northwest plume)**

>12 ng/L	WVNW-PW-3, WVNW-PW-4
<12 ng/L	WVNW-PW-1A, WVNW-PW-1B, WVNW-PW-2A, and WVNW-PW-2B

- **Wolven/Jewell Study Area (downgradient/northeast of the Wolven plume)**

>12 ng/L	Area19-GSI-1, Area19-PW-1, Area19-PW-2A, Area19-PW-2B, Area19-PW-3, Area19-PW-4A, Area19-PW-4B, Area19-PW-5, Area19-GSI-2, Area19-PW-6A, Area19-PW-6B, Area19-PW-7, and Area19-GSI-3
<12 ng/L	None
Non-Detect	WV-DEQ-MW9-57

- **Wolven/Childsdale Study Area**

>12 ng/L	WV/CH-PW-1, WV/CH-PW-2, WV/CH-PW-3, WV/CH-PW-4, WV/CH-PW-5, and WV/CH-PW-6A
<12 ng/L	None
Non-Detect	WV/CH-PW-6B

Pore-water sample results are summarized on **Table 4.** Groundwater sample results are summarized on **Table 5**. **Figures 6A** through **6C** summarize pore-water samples results for PFOS concentrations in each study area.

10.0 DATA QUALITY ASSURANCE AND CONTROL

QC samples were collected at a rate of one per 20 samples in accordance with the project-specific QAPP and approved GSI WP which included: field blanks, field duplicates, and MS/MSDs. All QA/QC samples were collected using the methods described in the SOPs and analyzed using the same analytical methods used for the primary sample.

Selected GSI data has been validated according to performance requirements and the QA/QC limits in Table D.1.1 of Revision 2 of the QAPP. In addition, R&W/GZA consulted the general guidance in the EPA Contract Laboratory Program National Functional Guidance for Organic and Inorganic Superfund Data Review and relevant analytical methods to assess data usability. Approximately 5% of all PFAS samples collected are included for data validation. Sample delivery group WA28027 from pore-water sampling was included within the 5% PFOS samples selected for data validation. Analytical deficiencies relative to the QAPP requirements will be identified and noted as a

result of the data validation. All analytical data has been provided to EGLE via EDD. Stage 4 Data Validation Report - Groundwater Surface Water Interface Area, produced by Environmental Standards, is included in **Appendix C**.

11.0 GSI WORK PLAN

Based on the groundwater monitoring and pore-water investigation data presented above, the following provides a summary of the WP. The proposed GSI sampling locations are shown on **Figures 6A** to **6C.** Actual monitoring well locations may vary slightly from the proposed locations during installation. While the target locations for the well clusters are shown, limitations for access on private properties, site conditions, and utilities may require moving monitoring well locations. GSI monitoring locations are proposed to monitor locations of highest PFOS concentrations in each study area. GSI monitoring locations will also be used to monitor the lateral extent of PFOS concentrations greater than 12 ng/L at the upstream and downstream extent of each study area. This WP outlines the initial phase of GSI investigation to further characterize each study area, and additional phases of GSI investigation (well installation) may be performed based on these results.

11.1. GSI RECOMMENDATIONS

As indicated in **Figures 3A**, **3B** and **3C**, the depth of the vertical groundwater discharge zone becomes less as the location approaches the Rogue River shoreline and becomes greater as the location is away from the Rogue River shoreline. As shown in **Figure 3A**, the limit of the vertical discharge zone at HS-MW-29A/B/C/D cluster is approximately 15 feet below the groundwater table, and only MW-29A appears to be an appropriate monitoring well that is capable of monitoring PFOS venting to the Rogue River. Monitoring well WV-MW-7S/M is located approximately 1,000 feet away from the Rogue River in **Figure 3B**, and the limit of the vertical groundwater discharge zone is approximately 55 feet BGT. Both WV-MW-7S and WV-MW-7M are screened within the estimated groundwater discharge zone and are capable of monitoring PFOS venting to the GSI. In **Figure 3C**, monitoring well cluster WV-DEQ-MW9 is located approximately 400 feet away from the Rogue River, and the shallowest well screen WV-DEQ-MW9-57 is below the estimated groundwater discharge zone, and therefore, is not an appropriate GSI monitoring well for that location. On the other hand, PFOS data collected from the shallow monitoring wells, such as AREA19-GSI-1, AREA19-GSI-2 and AREA19-GSI-3, which are screened within the estimated vertical discharge zone, were consistent with the pore-water sampling data. In short, monitoring wells located close to the Rogue River and screened in the shallow groundwater zone will provide effective GSI monitoring. Based on the groundwater flow evaluation and the existing PFOS groundwater monitoring data, VAP in the top 50 feet of the saturated zone should be sufficient for the proposed GSI monitoring wells if the locations are less than 500 feet away from the Rogue River shoreline. Existing monitoring wells will be evaluated for possible use as GSI monitoring points. Proposed RAP monitoring well clusters will also be evaluated for possible use as GSI monitoring points as they are installed, and groundwater measurements are collected. If determined to meet GSI monitoring criteria, the alternative locations for GSI monitoring will be provided to EGLE.

The GSI monitoring wells are to be placed as close to the Rogue River as possible, within 50 to 500 feet from the Rogue River shoreline. At each location, the soil boring will be advanced to approximately 50 feet BGT and VAP sampling (SOP A25) will be performed by setting a temporary well screen and collecting groundwater samples at an interval of 10 feet in the saturated zone. The VAP intervals will be 5 to 10 feet BGT, 15 to 20 feet BGT, 25 to 30 feet BGT, 35 to 40 feet BGT, and 45 to 50 feet BGT, assuming groundwater is encountered throughout the borehole depth. If fine-grained soil is present or groundwater column is discontinuous, the VAP intervals will be adjusted based on field observations.

The VAP data will be evaluated to determine the appropriate location for the placement of monitoring well screens. The wells in each study area that are located upstream and downstream of the PFOS concentrations

currently known to be over 12 ng/L are those used to delineate the lateral extent of each discharge area. If the VAP data from these locations indicates PFOS is found throughout the aquifer at detections greater than GSI criteria, a step-out boring may be completed further from the source area to better delineate the PFOS concentrations prior to the installation of the monitoring well cluster.

Upon the completion of soil boring and VAP sampling, one monitoring well will be installed within the top 10 feet of the saturated zone. If PFOS is not detected in the VAP samples, one well will be installed at the location. If PFOS is detected in the VAP samples, up to three monitoring wells will be installed at depths which will be selected based on PFOS concentrations and vertical monitoring spacing. The screen position of the deeper monitoring well will be selected based on the distance of the monitoring well to the shoreline, geology, and estimated groundwater flow path.

11.2. PROPOSED MONITORING LOCATIONS

Wolven Northwest

In the Wolven Northwest area, three GSI monitoring well locations are proposed.

- WVNW-MW-201 is positioned near the pore-water sample location WVNW-PW-3, where the highest PFOS concentration was detected in the pore-water sample in the area.

- Three locations are proposed to delineate the lateral extent of PFOS concentrations exceeding 12 ng/L in this area.
  - WVNW-MW-200 is proposed at the upstream reach of the Wolven Northwest area near WVNW-PW-2
  - WVNW-MW-202 is proposed at the downstream reach of the Wolven Northwest area near WVNW-PW-3
  - WVNW-MW-203 is proposed near the WV-MW-7S/M/D monitoring well cluster to straddle the groundwater table interface

Wolven Northeast

In Wolven Northeast, five GSI monitoring well locations are proposed to spatially cover the river reach from pore-water sample location AREA19-PW-1 to AREA19-PW-5, where PFOS was detected.

- Area19-MW-222 is positioned next to AREA19-PW-5, where the highest PFOS concentration in the pore-water samples was detected.

- The other four locations (Area19-MW-7 (Area 19 RAP well), Area19-MW-221, 223, and 224) are proposed near AREA19-GSI-1, between AREA19-PW-2 and AREA19-PW-3, near AREA19-PW-6, and south of AREA19-GSI-3 to delineate the PFOS extent upstream and downstream of this study area.

Wolven/Childsdale

In the Wolven/Childsdale study area, three GSI monitoring well locations are proposed.

- WV/CH-MW-241 is positioned next to WV/CH-PW-3 and downstream of WV/CH-PW-2, where the highest PFOS concentration in the pore-water samples was detected in this area.

- Two locations are proposed to delineate the lateral extent of PFOS concentrations exceeding 12 ng/L in this area.
  - WV/CH-MW-240 is proposed at the upstream reach of the Wolven/Childsdale area near WV/CH-PW-1
  - WV/CH-MW-242 is proposed at the downstream reach of the Wolven/Childsdale area near WV/CH-PW-5

HSP South/Southeast

In the HSP area to the southeast, six GSI monitoring well locations are proposed, including one existing monitoring well.

- In the HSP area to the southeast, three GSI monitoring well locations (HS-MW-260, 261, and 262) are proposed centered around HS-PW-3, where the highest PFOS concentration was detected in this area.

- HS-MW-266 is proposed near the northeast end of the Department of Natural Resource fishponds, hydraulically upgradient of proposed HS-MW-261.

- Two locations are proposed to delineate the lateral extent of PFOS concentrations upstream and downstream of HW-PW-3.
  - HS-MW-260 is proposed at the upstream reach of the HSP area near HS-PW-2.5
  - HS-MW-262 is proposed at the downstream reach of the HSP area near HS-PW-4

- Existing groundwater monitoring well HS-MW-29A is located near pore-water sample location HS-PW-3 and will be included as a GSI monitoring well.

- Three locations are proposed for downstream monitoring of the HSP plume:
  - HS-MW-263 is proposed near HS-PW-5
  - HS-MW-264 is proposed near HS-PW-8
  - HS-MW-265 is proposed near the Grand River to monitor potential PFOS migration to the south of the HSP plume.

Proposed GSI monitoring locations are provided on **Figures 6A** through **6C**.

Upon completion of the GSI monitoring well installation, the GSI monitoring wells and the existing groundwater monitoring wells in the HSP and Wolven/Jewell study areas will be sampled and analyzed for PFAS Compounds under the CD. The results of VAP sampling and groundwater sampling results will be evaluated to further determine if additional GSI monitoring wells are necessary. If no additional GSI monitoring wells are needed, the well network will be considered substantially complete. The first round of sampling completed at construction will be considered quarter one and three additional sampling events will take place in that year. If additional wells are needed, the four quarters of monitoring will not commence until the network is deemed substantially complete.

12.0 INVESTIGATION METHODOLOGY

Relevant tasks completed under this WP will be completed in accordance with the most recent revision of the QAPP prepared for Wolverine by R&W/GZA as well as methodologies outlined in the approved GSI WP.

The proposed well cluster locations will be drilled using either hollow-stem auger or rotosonic methods in accordance with SOPs A03 through A06 of the QAPP. When possible, the initial boring at each location will be drilled 50 feet into the groundwater table or upon refusal. The borehole-terminal depth will also be evaluated based on the depths of adjacent water wells and the presence of confining strata.

As the original borings are drilled at each location, VAP samples will be collected for PFAS analysis from water-bearing and permeable formation(s) at an interval of 10 feet. VAP will be completed in accordance with *SOP A25, Vertical Aquifer Profiling* included in the QAPP. The turn-around time for laboratory samples will be approximately three to four weeks.

Well installation depths are not predetermined. Based on the combination of profiling data, encountered geology, and corresponding piezometer and river elevations, R&W/GZA will determine the depth(s) of wells installed at each nest location. The monitoring wells will be developed in accordance with *SOP A13, Well Development* in the QAPP. Upon completion, the wells will also be surveyed by a licensed surveyor.

13.0 SAMPLING AND ANALYTICAL PROCEDURES

This section provides a generalized SAP for the GSI monitoring well sampling. Specific information regarding sampling procedures and analytical methods is provided in the site-specific QAPP and approved GSI WP.

Once the GSI well network is substantially complete (as identified in **Section 11**), all newly installed wells will be sampled quarterly for one year.

13.1. SAMPLING LOCATIONS

As discussed in **Section 11.1**, the following GSI monitoring and sampling locations are proposed:

Table 13.1.1 Proposed GSI Sampling Locations

Area of Investigation	GSI Monitoring Wells
Wolven Northwest • Downgradient of the northwest portion of the Wolven/Jewell plume along the Rogue River	• WVNW-MW-200 • WVNW-MW-201 • WVNW-MW-202 • WVNW-MW-203
Wolven Northeast • Downgradient of Wolven Northeast plume within the Rogue River	• Area19-MW-7 (Area 19 RAP well) • Area19-MW-221 • Area19-MW-222 • Area19-MW-223 • Area19-MW-224
North Childsdale Area • Downgradient of the Wolven study area	• WV/CH-MW-240 • WV/CH-MW-241 • WV/CH-MW-242

Downgradient of the HSP to the southeast • Southeast downgradient of the HSP primary plume along Rogue River	• HS-MW-260 • HS-MW-29A (existing well) • HS-MW-261 • HS-MW-262 • HS-MW-263 • HS-MW-264 • HS-MW-266
Downgradient of the HSP to the south • Downgradient of the HSP near Grand River	• HS-MW-265

13.2. SAMPLE COLLECTION AND LABELING

Samples will be collected for PFAS analysis following the methods summarized in **Section 13.0** and detailed in the sampling SOPs for Groundwater Monitoring Wells (*SOP A16; Low Flow Sampling*). Detailed field and laboratory requirements are provided in the site-specific QAPP.

Sample identification will consist of nomenclatures that include the unique location identification (see reference table above). If applicable, sample identification for each sample will be repeated for each sampling event with consistent spelling.

To prevent misidentification of samples, legible labels will be affixed to each sample container. The labels will be sufficiently durable to remain legible even when wet. At a minimum, the labels will contain the following information:

- Location ID;
- Name or initials of collector; and
- Date and time of collection.

13.3. SAMPLE SHIPPING

Sample bottles will be placed into the cooler and packed with double-bagged wet ice immediately following collection. Packing material will be used as necessary. A temperature blank will be placed in the cooler prior to shipment. The cooler shall be addressed to the appropriate laboratory and dispatched as soon as practical to ensure timely arrival.

13.4. ANALYTICAL METHOD AND PARAMETERS

PFAS will be analyzed using DoD QSM 5.3 guidelines for PFAS by isotope dilution methodology. The analyte list will include the 28 PFAS compounds specified in the CD, and reporting limits are provided in Table A.7.7 of the project-specific QAPP.

14.0 DATA QUALITY ASSURANCE AND CONTROL

The following field QC samples will be collected at a rate of one per 20 samples in accordance with the project-specific QAPP: Field blanks, field duplicates, and MS/MSDs. Field QC sample collection methodologies are outlined in the approved GSI RAP.

15.0 INVESTIGATION DERIVED WASTE

Soil cuttings will be containerized and transported to the HSP for staging/storage until off-site treatment/disposal or other approved handling can be arranged. The monitoring well development and purge water will be managed as follows:

- For locations where PFAS concentrations are known to be below Part 201 GRCC, the water can be discharged to the ground surface in accordance with EGLE interoffice communication regarding purge-water disposal from well sampling and development (EGLE, 1999).

- For locations where PFAS concentrations are unknown or known to exceed Part 201 GRCC, the water will be disposed of appropriately in accordance with the EGLE interoffice communication regarding purge water disposal from well sampling and development (EGLE, 1999), and not discharged to the ground surface.

16.0 ANTICIPATED SCHEDULE

The schedule for GSI monitoring well installation will depend greatly on R&W/GZA's ability to obtain access to the desired location or proximate alternate. The following table outlines R&W/GZA's current estimates of the steps and approximate timeframes for the tasks in this WP (upon EGLE approval).

Task	Estimated Timeframe per Location
Access	1 to 3 months
Initial Drilling	2 to 3 weeks
VAP analysis	3 weeks
Monitoring Wells Installation	1 to 2 weeks
Development Wait Time	2 weeks
First Groundwater Sampling	1 week
First Laboratory Analysis	3 weeks

The table includes a completion timeframe estimate of each task per location. Based upon the 19 proposed locations in this WP, R&W/GZA estimates this WP will require a total of 17 months to complete drilling, VAP analysis, and installation of the proposed monitoring wells. Access is likely to be granted piecemeal and will therefore create overlap in the schedule of tasks. If access issues do arise, the protocol laid out in **Section 9.0** of the CD will be implemented. Additional phases of well installation may be necessary to ensure that the well network is substantially complete. Quarterly sampling of the well network will begin following substantial completion of the network. Following the full year of quarterly sampling of the well network (i.e., receipt of final EDD), Wolverine will submit, within 180 days, a Completion Report per Section 7.12(a)(viii) of the CD.

TABLE 4 NOTES
GSI Investigation
Algoma and Plainfield Townships, Kent County, Michigan

NOTES:

1. Concentration and criteria units are micrograms per Liter (µg/L) or parts per billion (ppb). Calculated criteria and concentrations are rounded to two significant digits. "ND" indicates the parameters used in the calculation were not detected.
2. Michigan Part 201 Groundwater Cleanup Criteria are based on "Table 1, Groundwater: Residential and Nonresidential Part 201 Generic Cleanup Criteria and Screening Levels/Part 213 Tier I Risk Based Screening Levels," Michigan Administrative Code, Cleanup Criteria Requirements for Response Activity, Rules 299.44 and 299.49, effective December 30, 2013; last updated December 20, 2020.
   Abbreviations Include:
   "NCL" indicates no criterion listed in EGLE Table 1.
   "NA" indicates not available.
3. Bold, italic number with thick line border or italic parameter name indicates that parameter was detected above the Michigan Part 201 Groundwater Cleanup Criteria listed.
4. Abbreviations include:
   "< RL" indicates the parameter was analyzed for but not detected above the method detection limit; RL = Reporting Limit.
   "DUP" indicates a duplicate sample.
   "-" indicates the parameter was not analyzed.
5. Screen interval presented is the top of the screen to the bottom of the screen in feet below ground surface.

TABLE 5 NOTES
GSI Investigation
Algoma and Plainfield Townships, Kent County, Michigan

NOTES:

1. Concentration and criteria units are micrograms per Liter (µg/L) or parts per billion (ppb). Calculated criteria and concentrations are rounded to two significant digits. "ND" indicates the parameters used in the calculation were not detected.
2. Michigan Part 201 Groundwater Cleanup Criteria are based on "Table 1, Groundwater: Residential and Nonresidential Part 201 Generic Cleanup Criteria and Screening Levels/Part 213 Tier I Risk Based Screening Levels," Michigan Administrative Code, Cleanup Criteria Requirements for Response Activity, Rules 299.44 and 299.49, effective December 30, 2013; last updated December 21, 2020.
   Abbreviations Include:
   "NCL" indicates no criterion listed in EGLE Table 1.
   "NA" indicates not available.
3. Bold, italic number with thick line border or italic parameter name indicates that parameter was detected above the Michigan Part 201 Groundwater Cleanup Criteria listed.
4. Sample results from lab delivery group WA28027 were validated by Environmental Standards, Inc. as part of the five percent validation requirement in the consent decree.
5. Abbreviations include:
   "< RL" indicates the parameter was analyzed for but not detected above the method detection limit; RL = Reporting Limit.
   "DUP" indicates a duplicate sample.
   "-" indicates the parameter was not analyzed.
6. Validator qualifiers for WA28027 include:
   "J" indicates the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
7. Screen interval presented is the top of the screen to the bottom of the screen in feet below ground surface of the river bottom.

- Residential Water Well
- Monitoring Well
- Cross Section Line
- River or Stream
- Surface Water
- Approximate House Street Property (HSP)
- North Kent Study Area Outline
- Highway
- Primary County Road
- Other Road

Approximate Total PFAS Extent (nanograms per liter [ng/L])

- < 4 ng/L
- 4 - 10 ng/L
- 11 - 70 ng/L
- 71 - 1,000 ng/L
- 1,001 - 127,000 ng/L (MAX)

NOTES:
1. LOCATIONS AND SITE FEATURES ARE APPROXIMATE.

2. ACRONYMS
- (MAX) = MAXIMUM DETECTED CONCENTRATION IN THE SAMPLES.
- ng/L = NANOGRAM PER LITER
- PFAS = PER- AND POLY-FLUOROALKYL SUBSTANCES

3. NO TOTAL PFAS CRITERIA / SCREENING LEVELS.

4. MAXIMUM CONCENTRATION FROM MONITORING AND RESIDENTIAL WELL SAMPLE RESULTS (INCLUDING THE NORTH KENT LANDFILL STUDY AREA) WERE USED TO DEVELOP CONCENTRATION ISOPLETHS.

5. CONCENTRATION ISOPLETHS WERE DEVELOPED USING NATURAL NEIGHBOR INTERPOLATION IN ARCGIS. CONCENTRATIONS WERE NOT EXTRAPOLATED OUTSIDE OF THE AREA OF KNOWN CONCENTRATIONS.

6. RESIDENTIAL WELL SAMPLES WERE ANALYZED FOR PFAS USEING EPA METHOD 537.1 WHICH REPORTS THE RESULTS FOR 14 COMPOUNDS.

7. MONITORING WELL SAMPLES WERE ANALYZED FOR PFAS USING DOD QSM BY ISOTOPE DILUTION, WHICH REPORTS THE RESULTS FOR 23 COMPOUNDS.

8. THE TOTAL PFAS PRESENTED ON THIS FIGURE ARE CALCULATED FROM THE SUM OF THE 12 PFAS COMPOUNDS THAT ARE COMMON BETWEEN EPA METHOD 537.1 AND THE ISOTOPE DILUTION, DOD QSM METHODOLOGY.

- 4 - 10 ng/L
- 11 - 70 ng/L
- 71 - 1,000 ng/L
- 1,001 - 127,000 ng/L (MAX)

NOTES:

1. LOCATIONS AND SITE FEATURES ARE APPROXIMATE. VERTICAL EXTENT OF TOTAL PFAS DETECTIONS IS APPROXIMATE.

2. GROUND SURFACE ELEVATIONS ARE BASED ON DIGITAL RASTER FILES OF BARE EARTH DIGITAL ELEVATION MODELS (DEMS), GENERATED FROM LIDAR DATA WITH 1-METER HORIZONTAL ACCURACY AND 18.5-CENTIMETER VERTICAL ACCURACY. DIGITAL FILES OF DEMS AND LIDAR DATA WERE PROVIDED BY KENT COUNTY.

3. ESTIMATED POTENTIOMETRIC SURFACE WAS DEVELOPED BASED ON MEASUREMENTS MADE IN GROUNDWATER MONITORING WELLS IN NOVEMBER 2019. GROUNDWATER ELEVATIONS WERE NOT MEASURED FROM RESIDENTIAL WATER SUPPLY WELLS.

4. WELL SCREEN ELEVATIONS PROVIDED IN FEET ABOVE MEAN SEA LEVEL, NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88). RESIDENTIAL WELL SCREEN ELEVATIONS AND BOREHOLE LITHOLOGY ELEVATIONS WERE CALCULATED USING WELL INFORMATION PROVIDED BY THE STATE OF MICHIGAN'S WELLOGIC DATABASE AND GROUND SURFACE ELEVATIONS OF THE CENTER OF THE PPN GENERATED FROM LIDAR DATA PROVIDED BY KENT COUNTY. ELEVATIONS ARE ROUNDED TO THE NEAREST FOOT.

5. MAXIMUM CONCENTRATION FROM MONITORING AND RESIDENTIAL WELL SAMPLE RESULTS (INCLUDING THE NORTH KENT LANDFILL STUDY AREA) WERE USED TO DEVELOP CONCENTRATION ISOPLETHS. RESIDENTIAL WELL SAMPLES WERE ANALYZED FOR PFAS USEING EPA METHOD 537.1 WHICH REPORTS THE RESULTS FOR 14 COMPOUNDS. 12 PFAS COMPOUNDS IN COMMON ON BOTH LISTS WERE USED.

6. CONCENTRATION ISOPLETHS WERE DEVELOPED USING NATURAL NEIGHBOR INTERPOLATION IN ARCGIS. CONCENTRATIONS WERE NOT EXTRAPOLATED OUTSIDE OF THE AREA OF KNOWN CONCENTRATIONS.

- PRIMARY COUNTY ROAD
- OTHER ROAD
- RIVER OR STREAM
- SURFACE WATER
- NORTH KENT LANDFILL

APPROXIMATE TOTAL PFAS EXTENT (NANOGRAMS PER LITER [NG/L])

- < 4 NG/L
- 4 - 10 NG/L
- 11 - 70 NG/L
- 71 - 1,000 NG/L
- 1,001 - 127,000 NG/L (MAX)

NOTES:

1. LOCATIONS AND SITE FEATURES ARE APPROXIMATE. VERTICAL EXTENT OF TOTAL PFAS DETECTIONS IS APPROXIMATE.

2. GROUND SURFACE ELEVATIONS ARE BASED ON DIGITAL RASTER FILES OF BARE EARTH DIGITAL ELEVATION MODELS (DEMS), GENERATED FROM LIDAR DATA WITH 1-METER HORIZONTAL ACCURACY AND 18.5-CENTIMETER VERTICAL ACCURACY. DIGITAL FILES OF DEMS AND LIDAR DATA WERE PROVIDED BY KENT COUNTY.

3. ESTIMATED POTENTIOMETRIC SURFACE WAS DEVELOPED BASED ON MEASUREMENTS MADE IN GROUNDWATER MONITORING WELLS IN NOVEMBER 2019. GROUNDWATER ELEVATIONS WERE NOT MEASURED FROM RESIDENTIAL WATER SUPPLY WELLS.

4. WELL SCREEN ELEVATIONS PROVIDED IN FEET ABOVE MEAN SEA LEVEL, NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88). RESIDENTIAL WELL SCREEN ELEVATIONS AND BOREHOLE LITHOLOGY ELEVATIONS WERE CALCULATED USING WELL INFORMATION PROVIDED BY THE STATE OF MICHIGAN'S WELLOGIC DATABASE AND GROUND SURFACE ELEVATIONS OF THE CENTER OF THE PPN GENERATED FROM LIDAR DATA PROVIDED BY KENT COUNTY. ELEVATIONS ARE ROUNDED TO THE NEAREST FOOT.

5. MAXIMUM CONCENTRATION FROM MONITORING AND RESIDENTIAL WELL SAMPLE RESULTS (INCLUDING THE NORTH KENT LANDFILL STUDY AREA) WERE USED TO DEVELOP CONCENTRATION ISOPLETHS.

6. RESIDENTIAL WELL SAMPLES WERE ANALYZED FOR PFAS USING EPA METHOD 537.1 WHICH REPORTS THE RESULTS FOR 14 COMPOUNDS. MONITORING WELL SAMPLES WERE ANALYZED FOR PFAS USING DOD QSM BY ISOTOPE DILUTION, WHICH REPORTS THE RESULTS FOR 23 COMPOUNDS.

7. CONCENTRATION ISOPLETHS WERE DEVELOPED USING NATURAL NEIGHBOR INTERPOLATION IN ARCGIS. CONCENTRATIONS WERE NOT EXTRAPOLATED OUTSIDE OF THE AREA OF KNOWN CONCENTRATIONS. THE TOTAL PFAS ISOPLETHS ARE CALCULATED FROM THE SUM OF THE 12 PFAS COMPOUNDS THAT ARE COMMON BETWEEN EPA METHOD 537.1 AND THE ISOTOPE DILUTION, DOD QSM METHODOLOGY.

APPENDIX G - WELL SAMPLING WORKSHEET

For use with Peristaltic Pumps

Site Name

Page _____of_____

Date: 12/8/20 Well ID: Area 9-GS1-1

Weather Conditions: cloudy, high 40's

Sampler's Name (Print): Mariayla Myers

Purging Device & Serial # (pump type): GZA-Peri-B

Reference Measuring Point (Top of PVC/Top of Casing): Casing

Well Depth (ft, ref. to measuring point): 12

Screen Interval (ft, ref. to measuring point): 9-12 ft

Samples Collected: PFAs

Purging Start Time: 950 (24 hour cycle) Sample Time: 1045 (24 hour cycle)

Initial Water Level (ft, ref. to measuring point): 5.43

Tubing Intake (ft, ref. to measuring point): 10'

Total Purge Volume (gallons): 2.45

PVC/Inner Well Casing ID (inches): 1.25"

Tubing ID (inches): 1/4"

Indicator Parameter Stabilization: yes OR no (circle one)

Two Hour Time Limit Reached ? yes OR no (circle one)

Time at Sample Completion: 1050 (24 hour cycle)

Sample Delivery Group: WA28027

Introduction

This quality assurance (QA) review is based upon an examination of the data generated from the analyses of the samples collected as part of the Per- and Polyfluoroalkyl Substances (PFAS) Investigation Program at the Wolverine World Wide, Inc.'s (Wolverine's) Groundwater Surface Water Interface Area in Rockford, Michigan, in accordance with the Quality Assurance Project Plan Former Wolverine Tannery, House Street Property, and Wolven/Jewell Area (QAPP; GZA GeoEnvironmental, Inc. [GZA], November 1, 2018; Revision June 2021). The samples were analyzed for select PFAS by Pace Analytical Services, LLC (Pace) of West Columbia, South Carolina. Data were examined to determine compliance relative to Pace's standard operating procedure (SOP) "Determination of Per- and Polyfluoroalkyl Substances (PFAS) by LC/MS/MS (Isotope Dilution) QSM 5.1 Table B-15 (EPA 537 MOD ID)" (Pace Document Number: ME00213-14) and the usability of the analytical results in accordance with the Data Validation SOP for PFAS data for samples generated by this Pace SOP.

The analytical results for the organic target analytes are presented on the validated data summary tables in Section 2 of this report. These validated data summary tables were generated from the GZA database. The "Validation Result," "Validation LOQ" (*i.e.*, the limit of quantitation [LOQ]), and "Validation Detect Flag" fields on the validated data summary tables have been updated to reflect all final data validation qualifiers and results. Validation qualifier codes have been placed in the "Validation Qualifiers" fields on the data tables to enable the data user to quickly assess the qualitative and/or quantitative reliability of a result based on the criteria evaluated during this QA review. Finally, the "Validation Reason Code" field has been populated with codes that indicate the reason for the validation qualifiers. Definitions of the validation qualifiers and reason codes are presented with the validated data summary tables in Section 2.

The data reviewer has included copies of validation forms, quality control (QC) summary forms, and other documentation needed to support the findings in this QA review in the Data Support Documentation (Section 3). The cover sheet for this section is a checklist of the QA procedures required by the protocol and examined in this data review. The Case Narrative and Chain-of-Custody (COC) Record are included in Section 4. Project Correspondence is presented in Section 5.

The nine samples that have undergone a QA review for PFAS are on Table 1.

TABLE 1 – SUMMARY OF SAMPLES REVIEWED

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
HS-PW-2.5 (A)	WA28027-001	Aqueous	1/26/21
HS-PW-2.5 (B)	WA28027-002	Aqueous	1/26/21
HS-PW-3 (A)	WA28027-003	Aqueous	1/26/21
HS-PW-3 (A) DUP (Field Duplicate of HS-PW-3 (A))	WA28027-004	Aqueous	1/26/21
HS-PW-3.5 (A)	WA28027-005	Aqueous	1/26/21
HS-PW-3.5 (A)MS (Matrix Spike)	WA28027-005MS	Aqueous	1/26/21
HS-PW-3.5 (A)MSD (Matrix Spike Duplicate)	WA28027-005MSD	Aqueous	1/26/21
FB-1/26 (Field Blank)	WA28027-006	Aqueous	1/26/21
EB-HT (Equipment Blank)	WA28027-007	Aqueous	1/26/21

Section 1 Quality Assurance Review

The findings offered in this report for analyses that underwent a Stage 4 QA review are based upon a rigorous review of the tabulated summary forms and raw data, including the following checks and QC measures as applicable to this data set:

- Data completeness
- COC Record and sample condition upon laboratory receipt
- Sample preparation and analysis holding times
- Field and laboratory blank analysis results
- Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses
- Matrix spike/matrix spike duplicate (MS/MSD) analyses
- Surrogate/labeled pre-extraction internal standard recoveries
- Field duplicate precision
- Mass spectrometer tune checks
- Instrument calibration and verification
- Internal standard responses
- Quantitation and qualitative identification

Data were examined to determine compliance and usability of the analytical results relative to the QAPP and SOPs referenced above. Any findings are identified in the sections below.

Data Completeness

The Level 4 data deliverables were prepared by the laboratory and were reviewed by Environmental Standards, Inc. (Environmental Standards). The analytical data package was checked for completeness to ensure that all data requested were actually present in the data deliverables (refer to completeness forms in the Data Support Documentation [Section 3]). The data package was complete with any exceptions noted on the completeness forms.

Chain-of-Custody Record and Sample Condition upon Laboratory Receipt

All sample identifications (IDs) were consistent with the COC Record.

The sample reports were consistent with the analytical request designated on the COC Record.

The samples for PFAS analysis were received in good condition and within the acceptance criterion of ≤ 10°C.

Sample Preparation and Analysis Holding Times

All samples were extracted and analyzed within the QAPP-specified holding times.

Field and Laboratory Blank Analyses

Laboratory blank analyses were performed at the required frequencies. A summary of any positive results observed in the blanks associated with the samples is included in Section 3.

Instrument blanks were analyzed daily, at a minimum, and were evaluated to the LOQ. Qualification of data due to instrument blank contamination was not warranted.

Laboratory method blanks were evaluated to the LOQ for samples prepared within the same preparation batch. Qualification of data due to method blank contamination was not warranted.

Two aqueous field and equipment blanks (samples FB-1/26 and EB-HT) were evaluated to the LOQ for the aqueous samples included in this Sample Delivery Group (SDG). Qualification of aqueous sample data due to field and equipment blank contamination was not warranted.

Laboratory Control Sample/Laboratory Control Sample Duplicate Analyses

An LCS was included in each extraction batch as required.

All LCS percent recoveries (%Rs) were within QC acceptance limits.

In this SDG, the reported 50-150% LCS percent recovery QC acceptance limits were inconsistent with historically reported LCS percent recovery QC acceptance limits of 70-150%. The data reviewer evaluated the data to the historically reported acceptance limits.

Matrix Spike/Matrix Spike Duplicate Analyses

An MS (as well as a laboratory duplicate) was included in the extraction batch associated with samples HS-PW-2.5 (A), HS-PW-2.5 (B), HS-PW-3 (A), and HS-PW-3 (A) DUP; however, it was not evaluated, as it was performed on a sample that was not included in this data set.

An MS/MSD pair was included in the second extraction batch associated with sample HS-PW-3.5 (A). However, according to the Case Narrative, the pre-extraction internal standard (surrogate mix) was double spiked, and insufficient volume was available for a re-extraction, the data was reported as is. Theoretically, the MS/MSD results were approximately half of what they should have been, but due to possibly slight variations in spike volumes, the data reviewer did not assume an extract correction factor of 2 to be applied to the results. Based on professional judgment, the data reviewer did not use this erroneously spiked MS/MSD pair to qualify data. The data reviewer was unable to evaluate potential matrix interference within the extraction batches due to this issue.

In this SDG, the reported 50-150% MS/MSD percent recovery QC acceptance limits were inconsistent with historically reported MS/MSD percent recovery QC acceptance limits of 70-150%. The data reviewer evaluated the data to the historically reported acceptance limits.

Surrogate/Labeled Pre-extraction Internal Standard Recoveries

Surrogates were spiked prior to extraction and used as internal standards for the quantitation of target PFAS results. All surrogate (labeled pre-extraction internal standard) %Rs were within the QAPP acceptance criterion.

In this SDG, the reported 25-150% (10-150% for PFOSA) surrogate percent recovery acceptance limits were inconsistent with historically reported surrogate percent recovery acceptance limits of 50-150%. The data reviewer evaluated the data to the historically reported acceptance limits.

Field Duplicate Analyses

One field duplicate pair was collected and analyzed for PFAS with the aqueous samples in this data set (refer to Table 1). All field duplicate analyses were within QC acceptance limits (relative percent difference was < 30% when both of the results were > 5× the LOQ, or the difference was < 1× the LOQ when at least one result was ≤ 5× the LOQ).

Mass Spectrometer Tune Checks

The liquid chromatography/tandem mass spectrometry (LC/MS/MS) tune check was performed at the required frequency and met acceptance criteria.

Instrument Calibration and Verification

Instrument calibration, second-source initial calibration verification (ICV), and continuing calibration verification (CCV) analyses were performed at the required frequency and met acceptance criteria (“not-detected” results associated with high recoveries are excluded).

Pre-injection Internal Standard Responses

Pre-injection internal standards were spiked prior to injection. All pre-injection internal standard responses were within QC acceptance criteria (50-150% of the response in the associated mid-point of the initial calibration or associated CCV on days when the initial calibration was not performed).

Quantitation and Qualitative Identification

The laboratory-reported values (*e.g.*, sample results, instrument calibration results) were verified by recalculating the values using the raw instrument data provided by the laboratory. In addition, the raw data chromatograms were checked to ensure that the laboratory-reported analytes were correctly identified and quantitated. These checks were performed on a fraction of the results. Additional results were verified and/or recalculated if any issues were noted with the initial checks. Issues were not noted, with the exception of the following.

Samples HS-PW-2.5 (A), HS-PW-3 (A), and HS-PW-3 (A) DUP were reported from initial dilutions (5×) due to the high levels of PFAS present, with no undiluted analyses provided. As the laboratory raised the LOQs accordingly, qualification of the data was not warranted.

The reported positive results for the analyte in the following samples should be considered estimated. In the chromatograms for these samples, the composition of the linear and branched isomer peaks included in the response for the analyte in the sample was significantly different than the composition of the calibration standard.

Samples	Analyte	Qualifier	Validation Reason Code
HS-PW-2.5 (A), HS-PW-2.5 (B), HS-PW-3 (A), HS-PW-3 (A) DUP, and HS-PW-3.5 (A)	PFOS	J	LB

The compounds on the table below were reported by the laboratory with LOQs inconsistent with historically reported data. The data reviewer evaluated the raw data and determined that the change in LOQ was not impactful, as the compounds were “not-detected” to the historic LOQs; or were greater than the reported elevated LOQs.

Analyte(s)	Reported LOQ (ng/L)	Historically Reported LOQ (ng/L)
6:2 FTS and 8:2 FTS	8	4
PFOA	4	2

Conclusions

This QA review has identified a few aspects of the data that required qualification. The analytical data should be considered acceptable for use unless otherwise indicated in the QA review. Positive results that demonstrate a combination of low bias ("J-"), high bias ("J+"), and/or bias of unknown direction ("J") have been flagged "J" (unknown direction of bias) on the data tables as the direction of bias could not be assigned. In order to use any of the data, the data user should understand the qualifications and limitations specified in this QA review.

NOTES:

Qual: Qualifier(s) based on evaluation(s) other than Total/ vs. Dissolved comparison, if applicable (J, U, U* or B)
RPD: Relative Percent Difference
QL: Quantitation Limit
MDL: Method Detection Limit
RL: Reporting Limit. RL = QL for QL reporting and MDL for MDL reporting
J: The analyte concentration should be considered estimated
U: The analyte was not detected in the sample at or above the RL indicated. The RL will be used for comparison purposes.
UJ: The analyte was not detected in the sample at or above the Reporting Limit Indicated. The RL is approximate.
R: The analyte was analyzed for and detected, but sample results are unreliable. The presence or absence of the analyte cannot be verified.
UR: The analyte was analyzed for and not detected, but the determination that the analyte was not present in the sample is unreliable. The presence or absence of the analyte cannot be verified.
U* The result was blank qualified. The RL will be used for comparison purposes.
NA: The MDL (for QL reporting), RPD or Difference is not applicable

all "surrogate" results evaluated 50-150 as historically reported. all acceptable

6:2 FTS, 8:2 FTS, and PFOA LOQs are twice that of historically reported LOQs. The data reviewer confirmed in the raw data that this increase of LOQ had no impact, as the samples had no positive results for the compounds, or the result of the compound was greater than the LOQ.

LOQ = Limit of Quantitation
ND = Not detected at or above the LOQ
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
ND = Not detected at or above the LOQ
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
H = Out of holding time
W = Reported on wet weight basis

SCIEX Triple Quad™ 4500 or SCIEX Triple Quad™ 4500MD System

Planned Maintenance Procedure

GEN-IDV-08-6710-B

January 2019

AB Sciex Pte. Ltd.
Blk33, #04-06 Marsiling Industrial Estate Road 3
Woodlands Central Industrial Estate, Singapore 739256

Contents

Introduction 1

Note: For regulatory and safety information for the mass spectrometer, refer to the *System User Guide*.

The planned maintenance (PM) procedure is designed to help maintain overall system performance.

The PM is not intended to take the place of an Operational Qualification (OQ) nor is it intended to verify the instrument specifications. Separate Installation Qualification (IQ) and OQ services are available. Contact a SCIEX representative.

The procedure must be performed by a trained SCIEX Field Service Employee (FSE).

The procedure has been developed for the SCIEX Triple Quad™ 4500/4500MD system with the Turbo V™ ion source. It does not apply to any other products or processes.

The procedure does not address any customer-specific analytical protocol (performance qualification) or method validation.

Note: If an issue is identified and the system requires repair, then the customer is responsible for the repair at the expense of the customer, except to the extent that the system and the required repairs are covered by a SCIEX warranty or service contract. A separate repair service call must be opened and the repair hours must not be charged against this procedure.

Planned Maintenance Tasks 2

Note: Perform all procedures using the Turbo V™ ion source, unless otherwise specified.

Pre-Planned Maintenance

Note: Guideline values are for reference only. The pre-PM test results are not required to meet or exceed these values.

Pre-PM Tasks

Task	Complete	N/A
Ask the customer about system performance since the last visit and record comments. Performance ok.	✓	—
If the customer maintains a log for the system, then review it.	○	◉
Review the work to be performed with the customer.	✓	—

Task	Complete	N/A
Inspect for front-end contamination. Refer to Inspect for Contamination.	✓	—
Check the status of the RAID 1 hard drives.	✓	—

Vacuum System Tests

Pre-PM Pressure Test

Pre-PM Pressure Test is Complete	✓

Test	Guideline	Result
Vacuum chamber pressure with CAD gas off	0.4×10^{-5} torr ≤ $P_{CAD\ 0}$ ≤ 1.1×10^{-5} torr	0.5e-5
Vacuum chamber pressure with CAD gas set to Full	1.8×10^{-5} torr ≤ ($P_{CAD\ 12} - P_{CAD\ 0}$) ≤ 2.8×10^{-5} torr	1.8e-5

Pre-PM System Tests

Q1 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1254.925, 1545.134, 1952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
175.133	≥ 8.0×10^6	2.6e7	0.6 to 0.8	0.64
500.380	≥ 8.0×10^6	2.6e7	0.6 to 0.8	0.69
906.673	≥ 2.0×10^7	4.4e7	0.6 to 0.8	0.78
1952.427	≥ 8.8×10^5	5.4e6	0.6 to 0.8	0.83

Q3 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1254.925, 1545.134, 1952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
175.133	$\geq 8.0 \times 10^6$	3.0e7	0.6 to 0.8	0.76
500.380	$\geq 8.0 \times 10^6$	2.3e7	0.6 to 0.8	0.73
906.673	$\geq 2.0 \times 10^7$	5.3e7	0.6 to 0.8	0.80
1952.427	$\geq 8.8 \times 10^5$	1.0e7	0.6 to 0.8	1.1

Q1 Negative PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** NEG PPG, 3e-4 M
- **Flow rate:** 10 µL/min
- **Scan rate**: 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 44.998, 411.259, 585.385, 933.636, 1223.845, 1572.097, 1863.306, 1979.389, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
933.636	$\geq 1.8 \times 10^7$	3.2e7	0.6 to 0.8	0.70
1863.306	$\geq 1.4 \times 10^6$	7.5e6	0.6 to 0.8	0.68

Q3 Negative PPGs Test is Complete	✓

- **Test solution:** NEG PPG, 3e-4 M
- **Flow rate:** 10 µL/min
- **Scan rate**: 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 44.998, 411.259, 585.385, 933.636, 1223.845, 1572.097, 1863.306, 1979.389, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
933.636	$\geq 1.8 \times 10^7$	3.8e7	0.6 to 0.8	0.75
1863.306	$\geq 2.0 \times 10^6$	5.7e6	0.6 to 0.8	0.63

Planned Maintenance Tasks

Reserpine MS/MS Test is Complete	✓

- **Test solution:** Reserpine solution 0.167 pmol/µL
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s (both MS and MS/MS)
- **Scan mode:** Product Ion (MS2)
- **Product Of:** 609.3 (or as calibrated)
- **Product Ion:** 195.1
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 609.3 and 195.1, with peak intensities, peak width, and mass shift results, complete with method file information.

Guideline	Result
Transmission efficiency $\frac{Intensity\ for\ ion\ at\ m/z\ 195.1}{Intensity\ for\ ion\ at\ m/z\ 609.3\ (or\ as\ calibrated)} \times 100 \geq 10\%$	11.6%

Planned Maintenance

Mass Spectrometer Maintenance

Task	Complete	N/A
Shut down the system and then disconnect the mains supply power cable.	✓	—
If required, replace the roughing pump oil. The recommended interval is every 3 years for long-life (ES) pumps, or every year for other pumps. **Note:** If an oil change is not required, then inspect the oil level and top up, if necessary. **CAUTION: Potential System Damage. Do not mix different types of oil. Mixing mineral oil with synthetic oil can cause pump failure.**	✓	—
If required, replace the roughing pump oil exhaust filter. The recommended interval is every 24 months.	○	◒
Clean or replace the four air filters in the base of the mass spectrometer chassis.	✓	—
(If applicable) Clean the turbo pump filter screen.	◒	○
(If applicable) Verify the operation of the SCIEX-supplied bench cooling fans.	◒	○
Inspect the mass spectrometer, components, and cabling, as required.	✓	—
Clean the curtain plate.	✓	—
Clean the orifice plate.	✓	—
Clean the QJet® ion guide and IQ0 lens.	✓	—

Task	Complete	N/A
(If contamination is detected) Clean the Q0 region.	○	◉ —
Start up the system.	✓	—

Turbo V™ Ion Source Maintenance

Task	Complete	N/A
If necessary, replace the electrode in the TurboIonSpray® and the APCI probe.	◉	○
With the TurboIonSpray® probe installed, verify that the temperature (TEM) reaches the recommended set point of 500 °C.	✓	—
(If applicable) With the APCI probe installed, verify that the temperature (TEM) reaches the recommended set point of 400 °C.	○	◉

Post-Planned Maintenance

Task	Complete
Inspect for front-end contamination. Refer to Inspect for Contamination.	✓

Voltage Tests

Task	Complete
Inspect the RF tuning voltages at the QPS amplifier module and then, if required, tune the coil boxes.	✓
Inspect the detector voltage. Optimize, if required. Detector voltage: 1800	✓

Post-PM Pressure Test

Post-PM Pressure Test is Complete	✓

Test	Specification	Result
Vacuum chamber pressure with CAD gas off	0.4×10^{-5} torr $\leq P_{CAD\,0} \leq 1.1 \times 10^{-5}$ torr	0.7e-5
Vacuum chamber pressure with CAD gas set to Full	1.8×10^{-5} torr $\leq (P_{CAD\,12} - P_{CAD\,0}) \leq 2.8 \times 10^{-5}$ torr	2.2e-5

Post-PM System Tests

Q1 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1254.925, 1545.134, 1952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Specification	Result	Specification	Result
175.133	$\geq 8.0 \times 10^6$	2.7e7	0.6 to 0.8	0.71
500.380	$\geq 8.0 \times 10^6$	3.4e7	0.6 to 0.8	0.71
906.673	$\geq 2.0 \times 10^7$	5.0e7	0.6 to 0.8	0.74
1952.427	$\geq 8.8 \times 10^5$	5.2e6	0.6 to 0.8	0.74

Q1 Positive PPGs Test is Complete: Peak Width for Identified Masses	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1254.925, 1545.134, 1952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Scan Rate (Da/s)	Cycles	Specification (Da)	Result (Passed)
59.050, 175.133, 500.380, 616.464, 906.673, 1254.925, 1545.134, 1952.427	10	10	0.6 to 0.8	✓
	200	50	0.6 to 0.8	
	1 000	50	0.6 to 0.8	
	2 000	100	0.6 to 0.8

Reserpine MS/MS Test is Complete	✓

- **Test solution:** Reserpine solution 0.167 pmol/µL
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s (both MS and MS/MS)
- **Scan mode:** Product Ion (MS2)
- **Product Of:** 609.3 (or as calibrated)
- **Product Ion:** 195.1
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 609.3 and 195.1, with peak intensities, peak width, and mass shift results, complete with method file information.

Specification	Result
Transmission efficiency $\frac{Intensity\ for\ ion\ at\ m/z\ 195.1}{Intensity\ for\ ion\ at\ m/z\ 609.3\ (or\ as\ calibrated)} \times 100 \geq 10\%$	12.4%

Post-PM Tasks

Task	Complete	N/A
(Obtain customer approval first) Install any applicable Analyst®/Analyst® MD software HotFixes.	○	◉
Delete any unnecessary files.	✓	—
Back up the Analyst Data folder.	✓	—
(If applicable) Defragment the hard drive.	○	◉
(Not applicable for MD instrument families) If the customer has a Software Support Plan, then perform the Software Health Check: • (Obtain customer approval first) Install any compatible HotFixes and updates for SCIEX add-on software.	◉	○
Discuss warranty coverage for the StatusScope® remote monitoring service. Determine whether the customer already has StatusScope® remote monitoring service installed and, if not, whether it should be installed. **Note:** The StatusScope® remote monitoring service is not applicable for MD systems. **Note:** Installation of the StatusScope® remote monitoring service is available only to warranty and eligible contract customers. Refer to https://sciex.com/services/statusscope-remote-monitoring for a list of eligible contracts.	◉	○

StatusScope® Remote Monitoring Service Tasks

Task	Complete	N/A
If the StatusScope® remote monitoring service is not installed, then perform these tasks: 1. Complete the *StatusScope® User Access* form. 2. Verify the connection to the StatusScope® server. 3. Install the StatusScope® agent.	○	◉
Log on to the StatusScope® server using the FSE user name and then verify that the assets under the customer organization are connected to the StatusScope® server.	○	◉
Perform the post-PM fault test to verify that the mass spectrometer fault generated is shown in the StatusScope® remote monitoring service.	○	◉

Review

Task	Complete
Review the work performed with the customer.	✓
Record the verification data in this document and then attach all of the performance data.	✓
Review the routine maintenance schedule and the procedures with the customer.	✓
Complete this document: • Review the verification data with the customer. • Provide the customer with the completed document and the performance data. • If an electronic copy of the document is supplied to the customer, then save a copy on the Service drive.	✓

Signoff 3

Organization	Shealy Environmental		
Mass spectrometer serial number	BJ29321608	Service request number	4336406
FSE name	Lynne Russell	Date (yyyy-mm-dd)	2019-04-10
FSE signature	Lynne Russell		

Comments and Exceptions

LV 200 oil used.

Inspect for Contamination A

1. Run the **Q1 Pos PPG** method for 10 minutes, monitoring the TIC for degradation of the signal or sensitivity drops.
2. Change the polarity to negative, and then scan for one minute.
3. Change the polarity to positive, and then make sure that the **IS** parameter returns to the original value.
4. Run the method.

   If the signal sensitivity is restored temporarily but it starts to degrade again, then the charging effect is present.

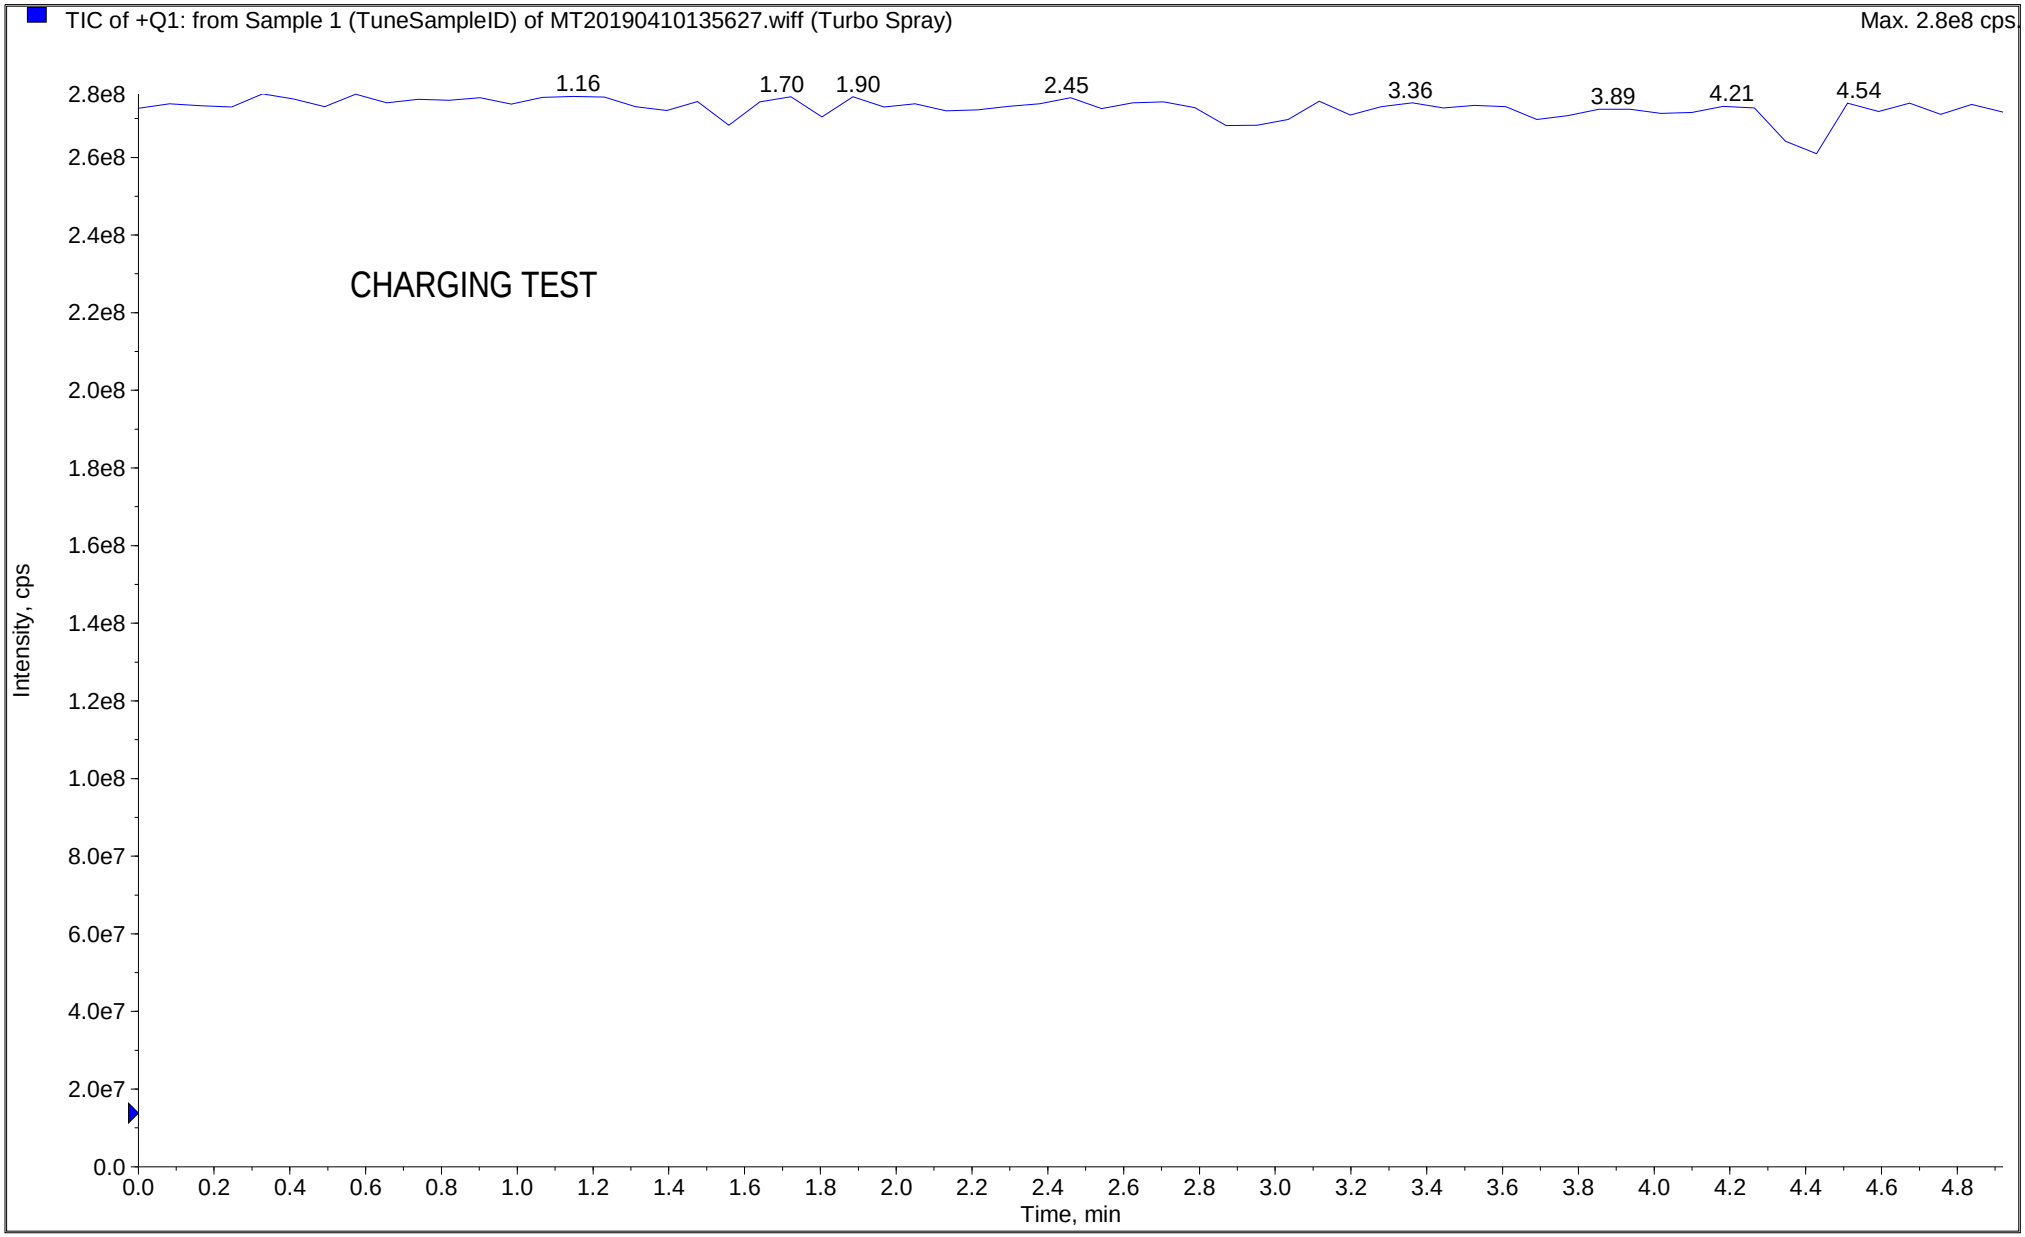
Guidelines for Identifying Components to be Cleaned

If the Q1 quadrupole is showing the charging effect and signal drop out, then clean the Q0 and the vacuum interface components (the curtain plate, orifice plate, the QJet® ion guide, and the Q0 side of the IQ0 lens) using the customer cleaning procedure, with the rod and tissues. In most cases, this will remove the contamination.

Notes:

- Do not remove the ion optics during a PM. This is considered to be a repair activity and requires a separate service call to be opened.
- Consider cleaning the Q1 quadrupole as well as other components (the stubbies and the IQ1 lens), if cleaning the front end does not eliminate the contamination.
- This guideline does not provide complete troubleshooting for all possible technical root causes of signal degradation or charging effect. Signal degradation might also result from a contaminated TurboIonSpray® probe or electrode, method parameters that are not optimized, and so on.

Printing Time: 6:20:07 PM
Printing Date: Friday, April 26, 2019
Polarity/Scan Type: Positive Q1 MS



* FSE Lynne Russell
*Post-PM Results

SCIEX Triple Quad™ 4500/4500MD System

Planned Maintenance Procedure

GEN-IDV-08-6710-C

August 2019

AB Sciex UK Limited
Phoenix House
Lakeside Drive, Centre Park
Warrington Cheshire
WA1 1RX, UK

AB Sciex Pte. Ltd.
Blk33, #04-06 Marsiling Industrial Estate Road 3
Woodlands Central Industrial Estate, Singapore 739256

Contents

Introduction 1

Note: For regulatory and safety information for the mass spectrometer, refer to the *System User Guide*.

The planned maintenance (PM) procedure is designed to help maintain overall system performance.

The PM is not intended to take the place of an Operational Qualification (OQ) nor is it intended to verify the instrument specifications. Separate Installation Qualification (IQ) and OQ services are available. Contact a SCIEX representative.

The procedure must be performed by a trained SCIEX Field Service Employee (FSE).

The procedure has been developed for the SCIEX Triple Quad™ 4500/4500MD system with the Turbo V™ ion source. It does not apply to any other products or processes.

The procedure does not address any customer-specific analytical protocol (performance qualification) or method validation.

Note: If an issue is identified and the system requires repair, then the customer is responsible for the repair at the expense of the customer, except to the extent that the system and the required repairs are covered by a SCIEX warranty or service contract. A separate repair service call must be opened and the repair hours must not be charged against this procedure.

Planned Maintenance Tasks 2

Note: Perform all procedures using the Turbo V™ ion source, unless otherwise specified.

Pre-Planned Maintenance

Note: Guideline values are for reference only. The pre-PM test results are not required to meet or exceed these values.

Pre-PM Tasks

Task	Complete	N/A
Ask the customer about system performance since the last visit and record comments.	✓	—
If the customer maintains a log for the system, then review it.	○	◉
Review the work to be performed with the customer.	✓	—

Task	Complete	N/A
Inspect for front-end contamination. Refer to Inspect for Contamination.	✓	—
Check the status of the RAID 1 hard drives.		—

Vacuum System Tests

Task			Complete
Record the turbo pump operational values.			
Parameter	**Results**		
Temperature (°C)	see notes		
Current (A)	see notes		
Voltage (V)	see notes		
Power (W)	see notes		
Driving frequency (Hz)	see notes		
Inspect the vacuum gauge filament using the Analyst® Service Diagnostics (ASD) software and identify the filament position. If the mass spectrometer is using filament 2, then order a replacement vacuum gauge as a separate service call.	1	◯	
	2	◯	

Pre-PM Pressure Test

Pre-PM Pressure Test is Complete	✓

Test	Guideline	Result
Vacuum chamber pressure with CAD gas off	0.4×10^{-5} torr $\leq P_{CAD\ 0} \leq 1.1 \times 10^{-5}$ torr	0.8e-5
Pressure difference (CAD_{12} minus CAD_0)	1.8×10^{-5} torr $\leq (P_{CAD\ 12} - P_{CAD\ 0}) \leq 2.8 \times 10^{-5}$ torr	2.5e-5

Pre-PM System Tests

Q1 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1 254.925, 1 545.134, 1 952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
175.133	$\geq 8.0 \times 10^6$	2.1e7	0.6 to 0.8	0.80
500.380	$\geq 8.0 \times 10^6$	3.0e7	0.6 to 0.8	0.99
906.673	$\geq 2.0 \times 10^7$	4.3e7	0.6 to 0.8	0.98
1 952.427	$\geq 8.8 \times 10^5$	8.2e6	0.6 to 0.8	n/a

Q3 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1 254.925, 1 545.134, 1 952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
175.133	$\geq 8.0 \times 10^6$	3.2e7	0.6 to 0.8	0.74
500.380	$\geq 8.0 \times 10^6$	3.3e7	0.6 to 0.8	0.80
906.673	$\geq 2.0 \times 10^7$	5.6e7	0.6 to 0.8	0.84
1 952.427	$\geq 8.8 \times 10^5$	9.8e6	0.6 to 0.8	1.1

Q1 Negative PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** NEG PPG, 3e-4 M
- **Flow rate:** 10 µL/min
- **Scan rate**: 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 44.998, 411.259, 585.385, 933.636, 1 223.845, 1 572.097, 1 863.306, 1 979.389, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
933.636	$\geq 1.8 \times 10^7$	1.7e7	0.6 to 0.8	0.66
1 863.306	$\geq 1.4 \times 10^6$	1.8e6	0.6 to 0.8	0.75

Q3 Negative PPGs Test is Complete	✓

- **Test solution:** NEG PPG, 3e-4 M
- **Flow rate:** 10 µL/min
- **Scan rate**: 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 44.998, 411.259, 585.385, 933.636, 1 223.845, 1 572.097, 1 863.306, 1 979.389, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Guideline	Result	Guideline	Result
933.636	$\geq 1.8 \times 10^7$	2.8e7	0.6 to 0.8	0.85
1 863.306	$\geq 2.0 \times 10^6$	3.3e6	0.6 to 0.8	0.69

Planned Maintenance Tasks

Reserpine MS/MS Test is Complete	✓

- **Test solution:** Reserpine solution 0.167 pmol/µL
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s (both MS and MS/MS)
- **Scan mode:** Product Ion (MS2)
- **Product Of:** 609.3 (or as calibrated)
- **Product Ion:** 195.1
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 609.3 and 195.1, with peak intensities, peak width, and mass shift results, complete with method file information.

Guideline	Result
Transmission efficiency $\frac{Intensity\ for\ ion\ at\ m/z\ 195.1}{Intensity\ for\ ion\ at\ m/z\ 609.3\ (or\ as\ calibrated)} \times 100 \Rightarrow 10\%$	4.3%

Planned Maintenance

Mass Spectrometer Maintenance

Task	Complete	N/A
Shut down the system and then disconnect the mains supply power cable.	✓	—
Verify the expiry date on the Powervar UPS battery system, and then recommend replacement of the battery tray, if required.	○	◉
If required, replace the roughing pump oil. The recommended interval is every 3 years. **Note:** If an oil change is not required, then inspect the oil level and top up, if necessary. **CAUTION: Potential System Damage. Do not mix different types of oil. Mixing mineral oil with synthetic oil can cause pump failure.**	✓	—
If required, replace the roughing pump oil exhaust filter. The recommended interval is every 3 years.	○	◉
Clean or replace the four air filters in the base of the mass spectrometer chassis.	✓	—
(If applicable) Clean the turbo pump filter screen.	○	◉
(If applicable) Verify the operation of the SCIEX-supplied bench cooling fans.	◉	○
Inspect the mass spectrometer, components, and cabling, as required.	✓	—
Clean the curtain plate.	✓	—
Clean the orifice plate.	✓	—
Clean the QJet® ion guide and IQ0 lens.	✓	—

Task	Complete	N/A
(If contamination is detected) Clean the Q0 region.	○	◉
Start up the system.	✓	—

Turbo V™ Ion Source Maintenance

Task	Complete	N/A
If necessary, replace the electrode in the TurboIonSpray® and the APCI probe.	◉	○
With the TurboIonSpray® probe installed, verify that the temperature (TEM) reaches the recommended set point of 500 °C.	✓	—
(If applicable) With the APCI probe installed, verify that the temperature (TEM) reaches the recommended set point of 400 °C.	○	◉

Software Maintenance

Note: This task is not applicable to MD systems.

Task	Complete	N/A
(Obtain customer approval first) Install any applicable Analyst® Software HotFixes.	○	◉

Post-Planned Maintenance

Task	Complete
Inspect for front-end contamination. Refer to Inspect for Contamination.	✓

Voltage Tests

Task	Complete
Inspect the RF tuning voltages at the QPS amplifier module and then, if required, tune the coil boxes.	✓
Inspect the detector voltage. Optimize, if required. Detector voltage: 2100	

Post-PM Pressure Test

Post-PM Pressure Test is Complete	✓

Test	Specification	Result
Vacuum chamber pressure with CAD gas off	0.4×10^{-5} torr ≤ $P_{CAD\ 0}$ ≤ 1.1×10^{-5} torr	0.8e-5
Pressure difference (CAD_{12} minus CAD_0)	1.8×10^{-5} torr ≤ ($P_{CAD\ 12} - P_{CAD\ 0}$) ≤ 2.8×10^{-5} torr	3.4e-5

Post-PM System Tests

Q1 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1 254.925, 1 545.134, 1 952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Specification	Result	Specification	Result
175.133	$\geq 8.0 \times 10^6$	2.1e7	0.6 to 0.8	0.75
500.380	$\geq 8.0 \times 10^6$	2.4e7	0.6 to 0.8	0.72
906.673	$\geq 2.0 \times 10^7$	3.6e7	0.6 to 0.8	0.72
1 952.427	$\geq 8.8 \times 10^5$	5.3e6	0.6 to 0.8	0.72

Q1 Positive PPGs Test is Complete: Peak Width for Identified Masses	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1 254.925, 1 545.134, 1 952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Scan Rate (Da/s)	Cycles	Specification (Da)	Result (Passed)
59.050, 175.133, 500.380, 616.464, 906.673, 1 254.925, 1 545.134, 1 952.427	10	10	0.6 to 0.8	✓
	200	50	0.6 to 0.8	
	1 000	50	0.6 to 0.8	
	2 000	100	0.6 to 0.8	

Q3 Positive PPGs Test is Complete: Intensity and Peak Width	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 59.050, 175.133, 500.380, 616.464, 906.673, 1 254.925, 1 545.134, 1 952.427, with peak intensities, peak width, and mass shift results, complete with method file information.

Note: After calibration, the mass shift result must be within 0.1 Da for all assigned masses.

Mass (Da)	Intensity (cps)		Peak Width (Da)	
	Specification	Result	Specification	Result
175.133	$\geq 8.0 \times 10^6$	2.7e7	0.6 to 0.8	0.72
500.380	$\geq 8.0 \times 10^6$	3.0e7	0.6 to 0.8	0.76
906.673	$\geq 2.0 \times 10^7$	4.9e7	0.6 to 0.8	0.70
1 952.427	$\geq 8.8 \times 10^5$	5.4e6	0.6 to 0.8	0.74

Q3 Positive PPGs Test is Complete: Peak Width for Identified Masses	✓

- **Test solution:** POS PPG, 2e-6 M
- **Flow rate:** 5 µL/min
- **MCA:** On

Reserpine MS/MS Test is Complete	✓

- **Test solution:** Reserpine solution 0.167 pmol/µL
- **Flow rate:** 5 µL/min
- **Scan rate:** 10 Da/s (both MS and MS/MS)
- **Scan mode:** Product Ion (MS2)
- **Product Of:** 609.3 (or as calibrated)
- **Product Ion:** 195.1
- **Cycles:** 10
- **MCA:** On
- **Printouts required:** Spectra for masses 609.3 and 195.1, with peak intensities, peak width, and mass shift results, complete with method file information.

Specification	Result
Transmission efficiency $\frac{Intensity\ for\ ion\ at\ m/z\ 195.1}{Intensity\ for\ ion\ at\ m/z\ 609.3\ (or\ as\ calibrated)} \times 100 \Rightarrow 10\%$	11.9%

Post-PM Tasks

Task	Complete	N/A
Delete any unnecessary files.	✓	—
Back up the Analyst Data folder.	✓	—
(If applicable) Defragment the hard drive.	○	◉
(Not applicable for MD instrument families) If the customer has a Software Support Plan, then perform the Software Health Check: • (Obtain customer approval first) Install any compatible HotFixes and updates for SCIEX add-on software.	◉	○
(Not applicable for MD instrument families) Discuss warranty coverage for the StatusScope® Remote Monitoring Service. Determine whether the customer already has StatusScope® Remote Monitoring Service installed and, if not, whether it should be installed. **Note:** Installation of the StatusScope® Remote Monitoring Service is available only to warranty and eligible contract customers. Refer to sciex.com/instrument-service-and-support/statusscope-remote-monitoring for a list of eligible contracts.	○	◉

StatusScope® Remote Monitoring Service Tasks

Note: The StatusScope® remote monitoring service is not applicable for MD systems.

Task	Complete	N/A
If the StatusScope® Remote Monitoring Service is not installed, then perform these tasks: 1. Make sure that the *StatusScope® Customer Remote Connectivity Authorization* and *Customer Remote Connectivity Registration* forms are both completed. 2. Verify the connection to the server for the StatusScope® Remote Monitoring Service. 3. Install the agent for the StatusScope® Remote Monitoring Service.	○	◉
Log on to the server for the StatusScope® Remote Monitoring Service using the FSE user name and then verify that the assets under the customer organization are connected to the server for the StatusScope® Remote Monitoring Service.	○	◉
Perform the post-PM fault test to verify that the mass spectrometer fault generated is shown in the StatusScope® Remote Monitoring Service.	○	◉

Wrap Up

Task	Complete	N/A
Review the work performed with the customer.	✓	—
Record the test results in this document and then attach all of the test data.	✓	—
Review the routine maintenance schedule and the procedures with the customer.	✓	—
Complete this document: • Review the test results with the customer. • Provide the customer with the completed document and the test data. • If an electronic copy of the document is supplied to the customer, then save a copy on the Service drive.	✓	—

Comments and Exceptions

Due to administrative restrictions, I was unable to use ASD to perform vacuum system test.
Oil and filter changes were not performed during this PM because they were not due. LER 09Mar2020

Inspect for Contamination A

1. Run the **Q1 Pos PPG** method for 10 minutes, monitoring the TIC for degradation of the signal or sensitivity drops.
2. Change the polarity to negative, and then scan for one minute.
3. Change the polarity to positive, and then make sure that the **IS** parameter returns to the original value.
4. Run the method.

   If the signal sensitivity is restored temporarily but it starts to degrade again, then the charging effect is present.

Guidelines for Identifying Components to be Cleaned

If the Q1 quadrupole is showing the charging effect and signal drop out, then clean the Q0 and the vacuum interface components (the curtain plate, orifice plate, the QJet® ion guide, and the Q0 side of the IQ0 and IQ1 lens) using the customer cleaning procedure, with the rod and tissues. In most cases, this will remove the contamination.

Notes:

- Do not remove the ion optics during a PM. This is considered to be a repair activity and requires a separate service call to be opened.
- Consider cleaning the Q1 quadrupole as well as other components (the stubbies and the IQ1 lens), if cleaning the front end does not eliminate the contamination.
- This guideline does not provide complete troubleshooting for all possible technical root causes of signal degradation or charging effect. Signal degradation might also result from a contaminated TurboIonSpray® probe or electrode, method parameters that are not optimized, and so on.

Pace Environmental Services, LLC

Initial Calibration RF Report

Batch: \\organics\LL\LCMSMS02.i\012621-nonDOD+ICAL.b

Method: LCMSMS02_PFAS-ID.M Instrument: LCMSMS02

Cal Start Date: 26-Jan-2021 13:22:18 Cal End Date: 26-Jan-2021 14:58:01

Method Lock: Unlocked Lock Date:

No.Compounds: 66 Integrator: picker

Calib Method: PFAS-ID

Calibration Concentration Units: ng/L

Initial Calibration Samples: Primary Reagent: Analytes

Report Date: 27-Jan-2021 16:50:51 AIM Revision: 2.0 05-Oct-2020 14:59:22

Pace Environmental Services, LLC

Initial Calibration RT Report

Batch: \\organics\LL\LCMSMS02.i\012621-nonDOD+ICAL.b

Method: LCMSMS02_PFAS-ID.M Instrument: LCMSMS02

Cal Start Date: 26-Jan-2021 13:22:18 Cal End Date: 26-Jan-2021 14:58:01

Method Lock: Unlocked Lock Date:

No.Compounds: 66 Integrator: picker

Calib Method: PFAS-ID

Calibration Concentration Units: ng/L

Initial Calibration Samples: Primary Reagent: Analytes

Pace Environmental Services, LLC

Initial Calibration RF Report

Batch: \\Organics\LL\LCMSMS01.i\020721-nonDOD-ICAL.b

Method: LCMSMS01_PFAS-ID.M Instrument: LCMSMS01

Cal Start Date: 07-Feb-2021 14:32:59 Cal End Date: 07-Feb-2021 16:08:04

Method Lock: Unlocked Lock Date:

No.Compounds: 66 Integrator: picker

Calib Method: PFAS-ID

Calibration Concentration Units: ng/L

Initial Calibration Samples: Primary Reagent: Analytes

Pace Environmental Services, LLC

Initial Calibration Signal Ratios Report

Batch: \\Organics\LL\LCMSMS01.i\020721-nonDOD-ICAL.b

Method: LCMSMS01_PFAS-ID.M Instrument: LCMSMS01

Cal Start Date: 07-Feb-2021 14:32:59 Cal End Date: 07-Feb-2021 16:08:04

Method Lock: Unlocked Lock Date:

No.Compounds: 66 Integrator: picker

Calib Method: PFAS-ID

Calibration Concentration Units: ng/L

Initial Calibration Samples: Primary Reagent: Analytes

Case Narrative
GZA GeoEnvironmental, Inc.
Lot Number: WA28027

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved The NELAC Institute (TNI) standards, the Pace Analytical Services, LLC ("Pace") Laboratory Quality Manual, standard operating procedures (SOPs), and Pace policies. Any exceptions to the TNI standards, the Laboratory Quality Manual, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Pace Project Manager listed on the cover page.

Due to a spiking error, the WA28027-005 Matrix Spike and Matrix Spike Duplicate (MS/MSD) were double-spiked with the EIS and Surrogate standard, affecting the recoveries. There was insufficient sample remaining to perform a re-extraction; therefore, the data have been reported and qualified. Parent sample WA28027-005 was correctly spiked.

double spike confirmed. MS/MSD not used to qualify data as the parent had acceptable "surrogate" recoveries

REVISED REPORT - February 11, 2021
A revised report was issued. The following PFAS note below was added to the Case Narrative page.

All other sample results are as reported in the original PDF report. This report supersedes and replaces any prior reports issued under this lot number.

PFAS – by Isotope Dilution

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.3 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples was in compliance with DOD QSM 5.3 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). For undiluted analysis. For undiluted analysis, the extract is prepared for injection by adding 182 uL of

sample extract + 8 uL of reagent water + 10 uL of internal standard solution to a polypropylene autosampler vial. An extra correction factor of 0.91 (182 uL / 200 uL = 0.91) applies. The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1/0.91.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

Attachments:	image001.png image002.png image003.png VJ29012_Report (1).pdf VI10034_Report.pdf

This sender is trusted.

Hi Jared,

I have attached a revised Level 2 report for VJ29012 and VI10034. The Level IVs are in the process of being revised to include the attached Level 2 reports. As soon as those are completed, I will forward to you.

For VJ29012, the COC was revised to reflect the correct preservative.

For VI10034, a note has been added to the Case Narrative page regarding the VI10034-001DU and VI10034-005MS.

For WA28027 – We no longer supply Internal Standard summary sheets (Form 8) for the Isotope Dilution (ID) methods (ID-AQ and ID-Solid) as they are not required by the methods (QSM Table B-15 or Wisconsin guidance); they are not used in the calculation of PFAS by ID. We only provide Form 8 for EPA 537.1 and 533.

Thank you,

Karen Coonan

Subject: RE: Pace SC / GZA requests for VI10034,VJ29012,WA28027

Hi Jared,

For WA28027, the revision to the report was that the "PFAS – by Isotope Dilution" note that was added to the Case Narrative. It is the note following the statement that is bold. The note pertains to the correction factor.

For the other requests below, I have asked the lab to look into these and provide the requested information. I will forward the information as soon as I receive it.

Thank you,

Karen Coonan

Subject: Pace SC / GZA requests for VI10034,VJ29012,WA28027

Good afternoon all, we have some requests for both the laboratory and GZA for a few items in SDGs VI10034, VJ29012, WA28027. Can these please be addressed and revised data packages issued?

VI10034 – Samples VI10034-001DU and VI10034-005 each had a failing pre-injection internal standard, the run log indicated they were to be re-ran. Can details of these failures be noted in the Case Narrative (if the samples were re-ran and confirmed the failure, ect) as it is a method deviation?

VJ29012 – Page 2 of the Chain of Custody indicated water preservation instead of Trizma, this appears to be in error; can this be confirmed and a revised CoC issued?

WA28027 –

1. A pre-injection internal standard summary form was not included. Historically this was provided for 537ID in the old data package format. Can this please be provided?
2. The Case Narrative includes language about the report being revised with a note added. However, I'm not seeing a note indicating a reason for the revision, only language about the repot superseding prior reports. Can this be checked or explained?

Thanks everyone

Jared Acker
