

June 16, 2023

Mr. Anthony Estell
Director, Office of Retirement Services
530 W. Allegan
Lansing, Michigan 48909

**Re: Separate Actuarial Valuation as of September 30, 2022 for
University Members of MPSERS (Retiree Health Benefits Only)**

Dear Mr. Estell:

We have completed a separate actuarial valuation of retiree health benefits for current and former employees of the seven Michigan Universities that have withdrawn from the Michigan Public School Employees' Retirement System (for their employees hired on or after January 1, 1996) due to the enactment of Act No. 272 of the Public Acts of 1995. This actuarial valuation was prepared as of September 30, 2022, and utilized the same actuarial assumptions and methods, plan provisions, and premiums used for the September 30, 2022 valuation of the Michigan Public School Employees' Retiree Health Benefits, with the exception that:

- (1) The Unfunded Actuarial Accrued Liability for University members is expected to be amortized by September 30, 2036, and
- (2) The payroll growth assumption for amortization purposes is 2.75%.

The purpose of the valuation is to provide the actuarially computed employer contribution for fiscal year 2025 and to evaluate the liabilities and funded status of the Retiree Health System for the affected members in total. This report should not be relied upon for any other purpose. Please see the September 30, 2022 Michigan Public School Employees' Retiree Health Benefits actuarial valuation report dated March 3, 2023 for additional discussion of the nature of actuarial calculations, additional disclosures required by Actuarial Standards of Practice, and more information related to economic and demographic assumptions and benefit provisions.

Table of Contents:

Table 4 - Summary of MPSERS Liability Transfers Between Non-University and University from October 1, 2021 through September 30, 2022

Table 5 - Allocation of September 30, 2022 MPSERS Assets Between University and Non-University Members

Table 6 - University Experience Gains/(Losses) During the Year Ended September 30, 2022

Comments

This report was prepared at the request of the Office of Retirement Services (ORS) and those designated or approved by the Office of Retirement Services. This report may be provided to parties other than the Office of Retirement Services only in its entirety and only with the permission of the Office of Retirement Services. GRS is not responsible for unauthorized use of this report.

The valuation was based upon information furnished by the Office of Retirement Services, concerning retiree health benefits, financial transactions, plan provisions, and active members, terminated members, retirees and beneficiaries. Data was checked for internal and year-to-year consistency but was not audited by us. We are not responsible for the accuracy or completeness of the information provided by the Office of Retirement Services.

The valuation summarized in this report involves actuarial calculations that require making assumptions about future events. The assumptions and methods are disclosed fully in the September 30, 2022 actuarial valuation report of the Michigan Public School Employees' Retiree Health Benefits, unless otherwise noted. In particular, we have assumed that the University members experience the same per capita costs as that of the entire MPSERS population. We believe that the assumptions and methods used in this report are reasonable and appropriate. However, other assumptions and methods could also be reasonable and could result in materially different results. Some of the numbers in this report are rounded. The use of rounded numbers should not imply a lack of precision. In addition, because it is not possible or practical to consider every possible contingency, we may use summary information, estimates, or simplifications of calculations to facilitate the modeling of future events. We may also exclude factors or data that we deem to be immaterial.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

Mr. Anthony Estell

To the best of our knowledge, the information contained in this report is accurate and fairly presents the actuarial position of the Plan as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. Mita D. Drazilov and Louise Gates are Members of the American Academy of Actuaries (MAAA), are independent of the plan sponsor, and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

Sincerely,
Gabriel, Roeder, Smith & Company

Mita D. Drazilov, ASA, FCA, MAAA

Louise Gates, ASA, FCA, MAAA

Table 1

Summary of Reported Participant Data Comparison of University and Non-University MPSERS Members as of September 30, 2022

Reported Program Participants	Total - All MPSERS Members	University MPSERS Members	Non-University MPSERS Members
Active Members ⁴			
Graded Premium			
Number	108,282	499	107,783
Average age	50.5	58.2	50.5
Average service	17.9	27.4	17.9
Reported payroll (millions)	\$ 6,599.7	\$ 28.0	\$ 6,571.7
Average annual pay	\$ 60,949	\$ 56,210	\$ 60,971
Other Coverage ³			
Reported payroll (millions)	\$ 2,993.3	\$ 100.4	
Inactive Vested Members			
Number ¹	2,271	33	2,238
Average age	54.9	58.4	54.8
Retirees and Beneficiaries			
Number ²	225,215	4,941	220,274
Average age	73.7	75.0	73.7

¹ Only includes inactive vested persons with 21 or more years of service at termination (10 or more years for MIPP/PPP members).

² Includes alternate payees and other individuals not eligible for or otherwise receiving subsidized retiree health benefits.

³ Unfunded Actuarial Accrued Liability (UAAL) contributions are expected to be collected on total payroll, not just the payroll of those employees eligible for Graded Premium retiree health coverage. For the Total MPSERS column, Other Coverage refers to payroll attributable to those covered by the Personal Healthcare Fund. For the University column, Other Coverage refers to payroll attributable to University MPSERS members covered by the Personal Healthcare Fund and University Non-MPSERS members.

⁴ The active members statistics exclude people provided in the valuation with both \$0 pay and 0 service as of September 30, 2022 (6,874 Total MPSERS members and 0 University MPSERS members).

Table 2

**Development of the Actuarially Computed Employer Contribution
as of September 30, 2022
for Fiscal Year 2025**

	Fiscal Year Beginning October 1, 2024		
	6.00% Interest		
	Total - All MPSERS Members	University MPSERS Members	Non-University MPSERS Members
Employer Normal Cost	\$ 65,347,086	\$ 276,256	\$ 65,070,830
Amortization of UAAL ¹	\$ 0	\$ 0	\$ 0
Actuarially Computed Employer Contribution	\$ 65,347,086	\$ 276,256	\$ 65,070,830

¹ UAAL was amortized over 14 years from October 1, 2024 in the total MPSERS retiree health valuation (12 years in the University retiree health valuation).

The UAAL was amortized as a level percent of active member payroll over a period of 14 years and a payroll growth assumption (for amortization purposes only) of 0.75% for the total MPSERS retiree health valuation. The UAAL was amortized as a level percent of active member payroll over a period of 12 years and a payroll growth assumption (for amortization purposes only) of 2.75% for the University retiree health valuation.

The actuarially computed employer contribution amounts presented throughout this report do not reflect: (1) the normal cost or UAAL “floor” provisions of Public Act 92 of 2017 and Public Act 181 of 2018, (2) the payroll floor provisions of Public Act 136 of 2016, or (3) any reconciliation payments as required by subsection 41(9) of MPSERS statute (for Non-University MPSERS members).

I. Market Rate of Return	(4.91)%	(4.91)%	(4.91)%
J. Ratio of Funding Value to Market Value	1.0754	1.0761	1.0754

¹ Administrative expenses include staff salaries and benefits, consulting, printing, postage, telephone, and other. The Administrative Expense attributable to University and Non-University members is derived from the total MPSERS values by allocating in proportion to the membership counts provided by ORS (5,631 University members and 339,995 total MPSERS members).

² Allocated in proportion to average market value.

³ Includes an adjustment for the difference between the amount submitted as Market Value Beginning of Year for the current report and the amount submitted as Market Value End of Year for the prior report. The adjustment was allocated between the University and Non-University groups in proportion to the prior year's end of year market values.

Table 6

University Experience Gains/(Losses) During Year Ended September 30, 2022

A. Derivation of Actuarial Gain/(Loss):

1. Unfunded Actuarial Accrued Liability (UAAL) - Previous Valuation	\$	(39,101,361)
2. Total Normal Cost (employer plus member) for Year Ending 9/30/2022		1,195,179
3. Total Contributions (employer plus member) for Year Ending 9/30/2022		14,469,316
4. Interest on:		
a. UAAL: Discount Rate* x (1)		(2,346,082)
b. Normal Cost and Contributions: Discount Rate* / 2 x [(2) - (3)]		(398,224)
c. Net Total: (a) + (b)		(2,744,306)
5. Change in UAAL due to Benefit Changes		-
6. Change in UAAL due to Assumption Changes		5,361,895
7. Expected UAAL Current Year:		
(1) + (2) - (3) + (4c) + (5) + (6)		(49,757,909)
8. Actual UAAL Current Year		(76,285,898)
9. Experience Gain/(Loss): (7) - (8)		26,527,989
as a percent of beginning of year liability		14.82%

* Discount rate is 6.00%.

Type of Activity

		Gain/(Loss)
1. Premiums. Gains and losses resulting from actual premiums in valuation year versus that assumed from prior valuation.	\$	26,875,075
2. Investment Income. If there is greater investment income than assumed, there is a gain. If less income, a loss.		(3,820,026)
3. Demographic and Other. Gains and losses resulting from demographic experience, data adjustments, timing of financial transactions, etc.		3,472,940
4. Composite Gain/(Loss) During Year.	\$	26,527,989

Please note that the Investment Income row above includes the accelerated recognition of investment gains associated with the Dedicated Gains Policy, if applicable.

Comments

Comment A: It has been reported that full funding of the retiree health benefit program began in fiscal year 2013 for the Non-University group. It has been reported that full funding of the retiree health benefit program began in fiscal year 2015 for the University group. It has also been reported that the September 30, 2022 annual actuarial valuation is used to establish the employer contribution for fiscal year 2025. Therefore, this report presents the actuarially computed employer contribution for fiscal year 2025 (based upon a 6.00% investment return assumption). Plan changes resulting from Public Act 300 of 2012 are reflected in this annual valuation. (They were first reflected in the September 30, 2012 valuation.) A brief summary of the plan changes follows:

- (1) 90% employer subsidy for benefit recipients already Medicare eligible as of January 1, 2013;
- (2) 80% employer subsidy for other members not covered by a grading provision;
- (3) 80% maximum employer subsidy for members covered by a grading provision;
- (4) Members hired prior to September 4, 2012 had the option to elect to forfeit employer subsidized retiree health coverage and participate in the Personal Healthcare Fund (PHF); and
- (5) Members hired on or after September 4, 2012 participate in the PHF with defined benefit retiree health coverage essentially limited to a lump sum at termination (\$1,000 or \$2,000 depending on age at termination), except in cases of duty death-in-service.

In addition to the above changes, future 3% of payroll active member contributions required to participate in the defined benefit retiree health program have been reflected in this valuation. A potential refund of a member's 3% contributions is assumed to occur from the pension portion of the Retirement System.

The actuarially computed employer contribution for fiscal year 2025 was determined to be \$65,347,086 for the total MPSERS retiree health valuation with \$276,256 attributable to the University members.

As indicated in the cover letter, only University members hired before January 1, 1996 are eligible for MPSERS retiree health benefits. The actuarially computed employer contribution amounts presented throughout this report do not reflect: (1) the normal cost or UAAL "floor" provisions of Public Act 92 of 2017 and Public Act 181 of 2018, (2) the payroll floor provisions of Public Act 136 of 2016, or (3) any reconciliation payments as required by subsection 41(9) of MPSERS statute (for Non-University MPSERS members).

Comment B: One of the key assumptions used in any valuation of the cost of post-employment benefits is the investment rate of return on Plan assets. Higher assumed investment returns will result in a lower actuarially computed employer contribution. Lower returns will tend to increase the actuarially computed employer contributions. We have calculated the liability and the resulting actuarially computed employer contribution based on a 6.00% assumed rate of return, and based on the employer's funding policy of contributing the full actuarially computed employer contribution into a qualified trust.

In accordance with the Dedicated Gains Policy, the investment return assumption remained 6.00%.

Comments

Comment C: It is our understanding that full funding of the retiree health benefits based on University specific employer contributions began in fiscal year 2015. As such, to the extent possible, assets attributable to University retiree health benefits will be tracked separately from those attributable to Non-University retiree health benefits. ORS provided certain non-investment cash flow items. The remaining cash flow items were estimated. The allocation of MPSERS retiree health assets is shown in Table 5, including accompanying notes describing the basis for allocating cash flow items not provided by ORS.

Comment D: Starting with the September 30, 2018 valuation, the funding value of assets was developed using an asset smoothing method. The funding value of assets recognizes assumed investment return fully each year. Differences between actual and assumed investment return are phased-in over a closed 5-year period. Prior to the September 30, 2018 valuation, the funding value of assets was equal to the market value of assets. For the total MPSERS retiree health valuation, the market value of assets as of September 30, 2022 was \$10.6 billion, while the funding value of assets as of September 30, 2022 was \$11.4 billion. For the University retiree health valuation, the market value of assets as of September 30, 2022 was \$214.1 million, while the funding value of assets as of September 30, 2022 was \$230.4 million.

Comment E: Because retiree health benefits are not related to active member payroll, full funding employer contributions are reported as a dollar amount, instead of expressed as a percentage of payroll. Some readers, however, are interested in the actuarially computed employer contributions expressed as a percentage of payroll. The actuarially computed employer contribution amounts expressed as percentages of payroll do not reflect: (1) the normal cost or UAAL “floor” provisions of Public Act 92 of 2017 and Public Act 181 of 2018, (2) the payroll floor provisions of Public Act 136 of 2016, or (3) any reconciliation payments as required by subsection 41(9) of MPSERS statute (for Non-University MPSERS members).

Total Retiree Health Valuation

The non-PHF active member payroll is projected to be \$6,050.7 million for the year beginning October 1, 2024, and the PHF active member payroll is projected to be \$4,360.2 million for the year beginning October 1, 2024. With the introduction of the PHF, the employer normal cost percent (i.e., 1.08%) is expressed as a percentage of non-PHF active member payroll, while the UAAL percent (i.e., 0.00%) is expressed as a percentage of total payroll (i.e., including both non-PHF and PHF active member payroll) based on current administrative practice.

University Retiree Health Valuation

The non-PHF (Graded Premium) University MPSERS active member payroll is projected to be \$20.0 million for the year beginning October 1, 2024, and the active member payroll for all University members not eligible for Graded Premium retiree medical coverage is projected to be \$119.3 million for the year beginning October 1, 2024. With the introduction of the PHF, the employer normal cost percent (i.e., 1.38%) is expressed as a percentage of non-PHF (Graded Premium) University MPSERS active member payroll, while the UAAL percent (i.e., 0.00%) is expressed as a percentage of total University member payroll (i.e., including both University MPSERS and non-MPSERS active member payroll) based on current administrative practice.

Comments

As previously noted, the payroll floor associated with Public Act 136 of 2016 is not reflected in this valuation report. The amortization payment portion of the employer contribution in dollars for the fiscal year beginning October 1, 2024 is \$0. The source of this payment, if applicable, either from the Universities or from the State, does not impact valuation results. In accordance with discussions with ORS staff, there is no reduction to the computed employer normal cost (i.e., amortization credit) in situations where an amortization payment is not required to finance a UAAL. As MPSERS is projected to be over 100% funded as of the beginning of fiscal year 2025 for both the University and Non-University groups, no amortization payment is required in the determination of the fiscal year 2025 actuarially computed employer contribution.

Comment F: The fiscal year 2025 employer contribution rates shown include the amortization of the UAAL over 14 years, beginning October 1, 2024 for the total MPSERS retiree health valuation. The amortization of the UAAL is over a 12-year period, beginning October 1, 2024 for the University retiree health valuation. The 12-year period was chosen to be consistent with the amortization period used in the 2022 University pension valuation.

Comment G: The employer subsidized October 1, 2022 per person health benefit costs were lower than projected by the 2021 valuation assumptions. The lower actual increases from 2021 to 2022 resulted in a lower-than-projected actuarially computed employer contribution and accrued liability.

Comment H: Beginning with the September 30, 2019 valuation, it was reported to the actuary that a reconciliation process, similar to that used for the pension valuation, had been implemented with respect to the employer retiree health contributions, with reconciliation payments beginning in fiscal year 2021. It is our understanding that the reconciliation process does not apply to University employer contributions. As noted previously, the Non-University contribution amounts shown in this document are in addition to any reconciliation payments as required by subsection 41(9) of the MPSERS statute. The scheduled reconciliation payments were prepared and reported by ORS and disclosed in the full MPSERS retiree health valuation report as of September 30, 2022.

Comment I: In accordance with Public Act 181 of 2018, the payroll growth assumption for amortization purposes used in determining the fiscal year 2025 employer contributions decreased from 2.00% to 1.50% for the total MPSERS retiree health valuation. In accordance with Public Act 220 of 2022, the payroll growth assumption for amortization purposes used in determining the fiscal year 2025 employer contributions further decreased from 1.50% to 0.75% for the total MPSERS retiree health valuation. These assumption changes had no impact on the Actuarial Accrued Liability or the actuarially computed employer contribution. As noted in Comment E, due to the projected funded status of MPSERS as of the beginning of fiscal year 2025, no amortization payment is required in the determination of the fiscal year 2025 actuarially computed employer contribution; therefore, there is no impact associated with reducing the amortization payroll growth assumption.

Additionally, it is our understanding that the schedule of decreasing payroll growth assumptions for amortization purposes associated with Public Act 181 of 2018 and Public Act 220 of 2022 do not apply to the Universities. As such, a payroll growth assumption for amortization purposes of 2.75% was used in determining the amortization of the UAAL component of the actuarially computed employer contribution for the University retiree health valuation.

Comments

Comment J: It is our understanding that the plan is participating in the Medicare Advantage program for calendar year 2023. The September 30, 2022 actuarial valuation was completed under the assumption that the plan will participate in the Medicare Advantage program for each year following the valuation date.

Comment K: In a Medicare Advantage program, the liability is based on the difference between the present value of future claims minus the present value of future Medicare reimbursements. For purposes of this valuation, future growth in Medicare reimbursements was assumed to be equal to future growth in post-65 medical and prescription drugs claims.

Comment L: Future trends in health costs defy accurate prediction. To the extent that future costs increase more (or less) than projected in this report, the computed liabilities and actuarially computed employer contributions will be higher (or lower) than shown in this report.

Comment M: Governmental Accounting Standards Board (GASB) Statement No. 74 is effective for the plan year ending September 30, 2017. A separate report is issued to comply with the actuarial requirements of this Statement.

Comment N: If a positive UAAL exists, it is GRS' understanding from ORS that the Universities are obligated to finance the UAAL even if a 100% funded ratio has been achieved in the past.

Comment O: Unless otherwise indicated, a funded status measurement presented in this report is based upon the Actuarial Accrued Liability and the funding value of assets. Unless otherwise indicated, with regards to any funded status measurements presented in this report:

- (1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's obligations. In addition, the measurement is inappropriate for assessing benefit security for the membership.
- (2) The measurement is dependent upon the actuarial cost method, which, in combination with the plan's amortization policy and asset valuation method, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. A funded status measurement in this report of 100% is not synonymous with no required future contributions. If the funded status were 100%, the plan would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
- (3) The measurement would produce a different result if the market value of assets were used instead of the funding value of assets, unless the market value of assets is used in the measurement.
