

2022 November General Election: Recounts, Ballot Audits, and Post-Election Procedural Audits

Michigan election officials have long conducted statewide post-election audits, which are required under the Michigan Election Law. Since November 2018, when proposal 2018-3 was passed by voters, Michiganders have had the right to post-election audits to ensure the accuracy and integrity of elections enshrined in Article II, Section 4 the Michigan State Constitution. In November 2022, another ballot proposal (Proposal 2022-2) amended this section of the constitution to clarify that post-election audits must be conducted only by election officials.

Michigan is one of eight states that administer elections at the local level and is one of the largest in both in terms of its population and geography to do so. The 83 county clerks, 280 city clerks, and 1,240 township clerks each play a role in the administration of elections. The Secretary of State serves as Michigan's chief election officer with supervisory control over county and local election officials in the performance of their election-related duties. Additionally, 83 bipartisan boards of county canvassers and the bipartisan Board of State Canvassers each are responsible for canvassing election results.

As the state's chief election officer, the Michigan Election Law provides the Secretary of State with the authority to prescribe the procedures with which audits will be conducted across the state. Statewide audits reflect the decentralized nature of Michigan's election system. Running of elections is a local responsibility held by Michigan's 1,520 city and township clerks, along with their staff, volunteers, and poll workers (election inspectors) they have hired to work in polling places and perform other election functions. Auditing of elections, which includes review of election materials, ballots, and the actions taken by city and township clerks who ran the elections, is performed by county and state officials.

Audits occur following completion of the canvass and certification process and any requested recounts, if applicable. Audits cannot occur until these processes are complete because the materials needed for audits—voting machines, ballots, ballot containers, and other Election Day materials—are required by the Michigan Election Law to be secured until these processes are complete.

The majority of the November 8, 2022, post-election audits were conducted by Michigan's 83 county clerks and their staff. County clerks do not administer elections directly on Election Day, but they do serve several critical election functions including the programming of election equipment and printing of ballots. The remainder were conducted by the Michigan Bureau of Elections (Bureau) on behalf of the Secretary of State.

The November 8, 2022 election included races for Governor, Attorney General, Secretary of State, U.S. Congress, and the Michigan Legislature, along with county and local races. Additionally, three statewide ballot questions appeared on the ballot. A total of 4,500,400 ballots were cast, a record for a non-presidential year. Michigan had the highest youth voter turnout in the nation according to the CIRCLE research organization at Tufts University.¹

On election night, precinct inspectors must balance the number of ballots tabulated with the number of voters listed in the pollbook and seal voted ballots in approved containers, and receiving boards verify the ballot containers are properly sealed, that seal numbers are accurately recorded in the pollbook, and the number of names entered in the pollbook balances with the number of ballots counted. Boards of county canvassers then review reported vote totals, combining the votes cast in all precincts for federal and state-level candidates, and determine the results for county and local elections and ballots questions. Finally, the Board of State Canvassers meets to canvass and certify federal and state-level offices.

After the canvass and certification of the November 8, 2022 election, three types of statewide reviews were conducted. First, individual voters requested partial statewide recounts (999 precincts) of statewide Proposals 2022-2 and 2022-3. After recounts were completed, Bureau staff and county clerks and their staff conducted two types of audits: 256 post-election procedural audits and a statistical statewide ballot audit of the gubernatorial election. Because of the need to complete recounts in December, audits were conducted in January rather than the typical audit period in December.

Recounts

A registered elector who voted at an election at which a statewide ballot question appeared on the ballot, and who believes that the canvass of the votes cast on the question is incorrect because of fraud or error in the precinct returns, may petition for a recount of the votes cast in the precincts involved. For the recount of a statewide question, the petition must be filed no later than 2 days after final certification and determination of the question by the Board of State Canvassers. A petitioner may ask that some or all of the precincts be recounted. The person seeking the recount must submit a written, notarized statement which specifies the question involved and sets forth the nature and character of the fraud or error along with a deposit of either \$25 per precinct requested or \$125 per precinct requested, depending on the vote differential.

All recounts conducted under the authority of the Board of State Canvassers are supervised by Bureau staff and done during a meeting of each county board of canvassers that have precincts included in the recount petition. The Board of State

¹ <https://circle.tufts.edu/latest-research/state-state-youth-voter-turnout-data-and-impact-election-laws-2022>.

Canvassers has instructed Bureau staff to perform recounts by hand tallying the results of the contested race or ballot questions.

The Bureau received petitions requesting recounts of both statewide proposals 2022-2 and 2022-3. Collectively, the petitions requested a total of 999 precincts—approximately 22 percent of all precincts in Michigan.

Bureau staff, with the assistance of county election officials in 43 counties, (some participating in both recounts) conducted these recounts. Recounts are conducted under the Michigan Election Law, Michigan Administrative Rules, and procedures defined by the Board of State Canvassers. All procedures are performed under the supervision of a Bureau staff member.

During a recount, a team of two workers checks the seal on the ballot container for a particular precinct against the seal number recorded in the pollbook and the ballot container certificate. If there is a match, the container is opened, and the ballots are counted. If the number of ballots equals either the number of names in the pollbook or the number of ballots tabulated on the Election Day, the precinct is recounted.² The same team of two then hand counts the requested race or ballot question. If there is an issue with the seal or the ballot count that causes the precinct to be not “recountable,” the election night results stand for that precinct.

Over a two-week period, approximately 690,000 ballots were hand counted between both proposals. Out of these hundreds of thousands of ballots, the recount of Proposal 2022-2 resulted in 14 more “Yes” votes and 20 more “No” votes than the original certified totals. The recount of Proposal 2022-3 resulted in 116 more “Yes” votes and 8 more “No” votes than the original certified totals.

Slight differences between machine count and human hand count are typical and usually result in an average difference of one vote per precinct. These differences can occur for several reasons. For example, a machine may disregard a faint mark, but human visual inspection may lead to determination that the voter marked a ballot selection. More often, a voter will make a correction (for example, by crossing out a selection and voting for the other candidate), which the machine will treat as an overvote (not counting either selection), but human visual inspection determines should be a vote for one of the candidates. This is why recount totals are sometimes slightly higher than machine-tabulated totals. Recounts can also review the ballot duplication process (in which ballots with errors or military/overseas and accessible ballots are copied by election inspectors onto regular ballots so they can be tabulated) and sometimes find duplication errors. Finally, human counters sometimes simply make mistakes in hand tallying ballots.

² If the number of ballots tabulated on Election Day, according to the tabulator tape, equals the number of names in the pollbook, a precinct is considered “balanced.” If a precinct is balanced (or there is an explanation for the imbalance), then the precinct can be recounted. However, even precincts that are out of balance can still be recounted if the number of physical ballots matches the number of ballots tabulated on Election Day).

After this careful review of approximately one out of every five precincts in the state, the recount determined that the tabulator results were correct, even though there were minor differences in vote totals. In those precincts where recounts could not be conducted because of an error, such a ballot container being improperly sealed, the recount also identified areas for improvement and points of emphasis for clerk and election inspector training. These types of errors are more comprehensively examined in post-election audits, as described further in the next section.

Post-election audits

The Bureau and clerks conducted two types of post-election audits following the November 2022 election. The Bureau and county clerks supervised precinct procedural audits, which have been conducted for many years and focus primarily on a review of election process in each reviewed precinct. Additionally, the Bureau supervised a statewide ballot audit using statistical methodology. Although this was not the first time statistical ballot audits were conducted in Michigan, it was the first statewide audit using the current format.

In 2022, the Bureau did not conduct absent voter counting board audits, which had been done for the first time in 2020.³ Compared to 2020, there were substantially fewer problems balancing absent voter counting boards. The improvement was attributable to improved training and procedures based on lessons learned from 2020; more staff and resources available to process absentee ballots, and a lower volume of absentee ballots compared to 2020.

Precinct procedural audits

As in past elections, Michigan's post-election audit process included precinct procedural audits. After an election, approximately 200 precincts are randomly selected for procedural audits with at least one precinct in each county. The vast majority of audits are conducted by county clerks and their staff, although Bureau staff also conduct several audits. County election officials audit randomly selected precincts and Bureau staff may audit randomly selected precincts or additional precincts if issues occurred in recent elections.

Procedural audits involve a check of more than 70 key points in the election process following two election dates each year.⁴ Michigan's procedural audits review each aspect of the election life cycle (pre, during, and post) to ensure that jurisdictions are meeting the statutory requirements, as well as following best practices and

³ https://www.michigan.gov/-/media/Project/Websites/sos/30lawens/BOE_2020_Post_Election_Audit_Report_04_21_21.pdf?rev=a3c7ee8c06984864870c540a266177f2

⁴ May and November. The short time between the August and November elections makes it impractical to perform post-August audits. The Bureau has recommended adjusting the election calendar partially for this reason. For more information, see legislative recommendations later in the report.

outlined procedures. Some examples of the items reviewed⁵ are described in the following paragraphs.

Election notices

Auditors check to ensure that all legally required notices to inform the public of important election information have been posted. Notices inform the public of the upcoming election, where the election will be held, what's on the ballot, and the type of voting equipment available for use at each location. Additionally, information on the steps and requirements of voter registration, options or methods of voter registration, and clerk's office hours must be posted. Clerks also provide information on absentee ballot options, access, and requirements.

Election inspectors

Auditors review proof of training and qualifications of election inspectors. Election inspectors must meet all statutory requirements, list a political party, and undergo training biennially to be certified. Election inspectors are appointed by the city or township election commission prior to each election. In statewide elections, major political parties are notified of the inspector appointments; proof of this notification is verified during the audit.

Logic and accuracy testing

Auditors review documentation showing that election equipment was thoroughly tested prior to each election to ensure that it is performing and tabulating ballots accurately. Each jurisdiction produces a test deck of ballots and a test chart based on legally required test scenarios and ballot content. Marked ballots are tabulated in the equipment and results are compared to the chart of expected results to verify voting equipment is accurately accepting ballots and accumulating results.

These tests are performed in a public venue prior to the election, allowing for interested parties to observe. Following a full test of the equipment, each unit is sealed with tamper-evident security seals that have individual serial numbers. Seals are tested and certified by the state and are custom selected for use on each equipment type. The local election commission must attest to the seals on a testing certificate and the numbered security seals are additionally noted in the pollbook. Security seals are kept intact throughout the election and are not cut until the media device is removed for result reporting after close of polls.

In addition to the election-specific seals applied following pre-election testing, tamper evident "void" seals with individual serial numbers are applied to the physical body of election equipment. These "void" seals will alert election officials to

⁵ For a full list of items reviewed during precinct procedural audits, see materials under "Post-Election Audits" at the Election Administrator page on the Secretary of State's website, <https://www.michigan.gov/sos/elections/admin-info>.

any attempted unauthorized access to internal components (if tampered with, the residual “void” wording will stay attached and will be easily visible).

Election equipment and physical storage

Auditors review the electronic pollbook (EPB) to ensure it was used properly with required security and encryption protocols. They also verify that the Voter Assist Terminal (VAT) was tested and prepared for use on Election Day. The VAT is a ballot-marking device that voters with disabilities and other voters may use to assist them in marking a paper ballot which is then tabulated. Additionally, physical storage and access to election equipment is reviewed to verify that unauthorized access is prevented, and election equipment is being stored under acceptable temperature and moisture conditions.

Ballot containers

Auditors verify a state-approved and county-certified ballot storage container is being used as required. County election commissions meet every 4 years to certify state-approved containers for use. Signed approval certificates are applied to each container that passes inspection. Auditors review container compliance and integrity as well as proper seal use and signing of container certificates. Ballot containers used to store ballots used during equipment testing are also checked for these same requirements. Use of proper ballot containers, as well as proper sealing procedures, are a vital component of ensuring the election materials are properly secured for retention.

Paperwork assessment

Auditors review the pollbook to make sure it is complete, required oaths were performed, signatures of election inspectors were gathered, proper political party apportionment of election inspectors was observed, and equipment serial and seal numbers were captured. Other items may also be included in the pollbook, which if present are reviewed to verify they are properly performed and noted in the pollbook. These include remarks, write-in votes, spoiled ballots, challenged voters, affidavit or envelope ballots, and absentee ballots.

Auditors also review the ballot summary, list of voters and statement of votes for accuracy, balance, and proper accounting of all ballots in the precinct board’s possession during the election. The paper applications to vote that voters complete at the polling place before being issued a ballot are reviewed for completeness and accurate accounting. Absent voter ballot applications completed by military and overseas voters are reviewed for proper and timely processing.

Areas for improvement identified

Procedural audits help verify election outcomes are correct and show good general compliance with election requirements. In cases where they identify lack of full compliance with election law or practice, they also identify areas for improvements.

Although the issues identified are typically relatively minor, they become points of emphasis for training and drawing attention to best practices. There are multiple ways in which these points of emphasis are provided for future elections:

- Clerk accreditation training
- Continuing education (election cycle) training
- Train-the-trainer election inspector training
- County and municipal training of election inspectors
- Individual follow-up or assignment of training to specific jurisdictions

Procedural audit findings were analyzed for commonly occurring errors, points of confusion, or lack of compliance. The following issues were noted in multiple jurisdictions and reported to the Bureau training team for incorporation or reinforcement in future election cycle trainings.

- **Ballot duplication:** Ballot duplication is the process in which an absent voter ballot may need to be duplicated onto a new ballot by two election inspectors of different political parties to allow for accurate tabulation. Pairs of election inspectors use a methodical, “reader-checker” process to capture all valid votes onto a new ballot. Ballot duplication may be necessary due to a stained, torn or otherwise damaged ballot. Ballots containing a voter correction or an invalid write-in causing an overvote, a straight party indirect vote error or a false cross-over vote in a partisan primary will require duplication. Other errors such as stray marks, pen drags, pen rests or use of an improper marking tool would require ballot duplication. Additionally, electronic ballots returned by military or overseas voters and federal write-in absentee ballots must always be duplicated onto an official printed ballot. The audits found that in some cases, precinct inspectors did not correctly duplicate a race where there was a straight party vote, a correction, or an invalid write-in, causing a false overvote.
- **Receiving board duties:** A receiving board is an independent board of election inspectors established to ensure the recountability of election precincts. Receiving board inspectors receive the sealed ballot container, the pollbook and the statement of votes from each precinct after the polls close. The receiving board inspectors verify the pollbook and/or statement of votes are not sealed into the ballot container; the ballot container is properly sealed, and the seal number is accurately recorded; and the number of names entered in the pollbook balances with the number of ballots counted. The audits found that in some cases, the receiving boards were not properly established as outlined in procedures, failed to perform all tasks, or were lacking documentation of the review.

- Election commission requirements: Local election commissions are responsible for establishing precincts, including temporary precinct consolidations for non-state/federal elections; establishing Absent Voter Counting Boards; assessing voting equipment needs; performing logic and accuracy testing for voting equipment, even if the county performs the programming for the local jurisdictions; authorizing the printing and provision of ballots for use in city, township, village and certain school district elections; providing election supplies (including forms and ballot containers); appointing precinct inspectors prior to each election; and notifying major political parties of the appointment of election inspectors in federal and state elections. The audits found that while no significant errors were discovered, in some cases, jurisdictions failed to have documentation available to verify that all necessary notifications and processes were performed.

Ballot hand count

Procedural audits also include a hand count of all votes cast in the precinct for a statewide race. In 2022, the Governor race was selected for hand count. To complete the hand count, auditors review every paper ballot in the precinct and make a hand tally of votes for the selected race. The total is compared to the number tabulated using the voting machine. After hand counts conducted in more than 200 randomly selected precincts, county clerk auditors did not report instances in which hand counts differed substantially from machine-tabulated totals. This is discussed further in the description of the ballot audit, which is a separate process from the procedural audit but was combined in some precincts as explained in the next section.

Ballot audit

Michigan performs a statewide ballot audit, which is a statistical audit using risk limiting audit (RLA) methodology. This audit supplements procedural audits, which review that elections were conducted using proper procedures and also include ballot spot checks, by systematically reviewing and verifying the election result in a selected race.

When conducting an RLA, a “risk limit” is set that determines how many ballots must be reviewed to discover if a problem in the tabulation occurred that would have changed the outcome of the election. To determine the risk limit ballot sample size, a statistical program uses the certified election results, number of ballots cast and counted, the total number of “batches” of ballots in each precinct or container and the total number of batches, and the margin of votes between each candidate or ballot question as data points. It then compiles this data and calculates how many ballots must be reviewed to generate a proper sample size for the audit.

RLAs are a valuable tool because of their ability to efficiently review the results of an election in which a large number of ballots were cast *without* conducting a full hand recount of the election. Instead, RLAs review a random sample of ballots drawn statewide. RLAs review enough ballots to determine there is a sufficiently minimal risk (the risk limit) that completing a full hand recount of the entire election would not lead to a different result than the result reached in the audit. The more ballots randomly reviewed, the lower the statistical risk limit is and the higher the statistical confidence is in the outcome of the election.

Michigan began piloting RLAs in 2018 and conducted two statewide RLA processes in 2020: a pilot audit of the 2020 presidential primary⁶ and a statewide exercise in the 2020 general election.⁷ In recent years, Michigan has experimented with multiple types of RLA ballot review methods. There are two basic RLA ballot review methods.

- In the “ballot polling” method, individual ballots are selected from the statewide sample of all ballots. The audit software will instruct each clerk or audit team with a ballot selected to select that specific ballot for review. For example, the program may tell the clerk to select ballot #79 as it rests inside the ballot container for precinct 1 in jurisdiction A. The election official counts down to that ballot in the stack, retrieves the ballot and notes the result. In each precinct, once all of the selected ballots are retrieved from the container and tallied, it is re-sealed.

This is done for thousands of ballots statewide to create a random sample of ballots, which is then “polled” and compared to the statewide totals in the certified results. Specifically, the contest selected for the audit is hand counted by each individual clerk or audit team and vote tallies are shared with a central location for result calculation. Upon conclusion of the counts, the risk limit is calculated based on the hand counts vs. original counts.

- In the “ballot comparison” method, randomly selected paper ballots are compared to the tabulator record for that ballot, rather than being combined into a sample and compared to the statewide total. The ballot comparison model works well in some states, like Colorado, which tabulate ballots in batches at more central locations. In these locations, high-speed scanners are utilized and generate and store a “cast-vote record” that can be easily compared to each individual ballot. Because of the level of decentralization in Michigan, not all equipment used generates and stores a cast-vote record. While high-speed equipment used to tabulate absent voter ballots in large cities like Detroit and Grand Rapids do generate and store these records,

⁶ https://www.michigan.gov/-/media/Project/Websites/sos/14lawensn/Michigan_RLA_Report.pdf?rev=27e74fddb2e946a3aa4b8b5debfe1bb9

⁷ https://www.michigan.gov/-/media/Project/Websites/sos/30lawens/BOE_2020_Post_Election_Audit_Report_04_21_21.pdf?rev=a3c7ee8c06984864870c540a266177f2

regular tabulators used in smaller locations do not. Overall, while this method is efficient and produces accurate results and is similar in structure to Michigan's absentee boards, it does not align with the in-precinct voting.

In audits conducted between 2018 and 2020, the Bureau and clerks identified challenges implementing both models in Michigan. The ballot-polling method, used in November 2020, did allow for a statewide statistical sample to be drawn, and the results in the sample did align with the certified results. However, election officials found that this method, while accurate, proved difficult to explain to interested parties. Additionally, it required a separate audit stage to be conducted after precinct procedural audits were completed, which was not time efficient. Finally, a complete sample required 100 percent participation from over 1,000 clerks, which was a compliance and enforcement challenge. For the reasons described earlier in this report, an individual ballot-comparison audit cannot currently be done with equipment as it is currently utilized in Michigan.

In an effort to find a method that is more suitable, the Bureau explored an alternate method of ballot-comparison audits called "batch comparison." In this methodology, a batch of ballots (rather than an individual ballot) is compared to the tabulator total for that batch of ballots. This method was previously considered but not fully explored, in part because typical batch comparison previously depended on a uniform number of ballots per batch (for example, 100 per batch), which is feasible when using high-speed scanners used for absentee ballots but not regular precinct tabulators, in which the container holds however many ballots were cast on that tabulator. However, after the inefficiencies identified through the ballot-polling method, the Bureau re-examined its feasibility in Michigan.

In 2021 and early 2022, based on the experience in ballot audits and clerk input, Michigan began piloting a new version of statistical auditing using the batch comparison method, but allowing for entire containers to be used as "batches" regardless of how many ballots are in the container. This hybrid method, the "Ballot Audit," is in some ways a blend of the "polling" and "comparison" methods.

Michigan's ballot audit involves selecting a batch sample size that is equal to an entire precinct (in-person or absentee), rather than a portion of a precinct or an individual ballot. The audit process then requires a hand count of the entire batch (precinct) sample, which is similar to the process currently used by election officials in procedural audits and recounts. However, it differs in that the precincts or "batches" are selected to generate a statistically valid sample. The statistical calculation can be modified to account for the fact that batches will occur in different sizes and still generate a valid sample to calculate the risk limit.

In several pilots in 2021 and 2022, the Bureau and clerks identified several benefits to this model. The process is familiar to clerks and the public and needs little additional training, since it looks much more like the hand count done in a procedural audit or recount, in which every ballot in the container is counted. The ability to compare the hand count of an entire precinct to the certified total for that

precinct is easily understood and the process has proven to be much easier to explain, while being of equal statistical validity. Clerks have expressed satisfaction with the ballot audit method as they can easily use the results to verify equipment performance and convey the verification process and the results effectively to their voters.

Critically, these audits can also be done simultaneously and in conjunction with procedural audits. Although the random selection of precincts for procedural and ballot audits are done separately, the results of the random selections are merged where possible so that a single precinct can be used for both the procedural and ballot audits if doing so will not affect the statistical sample in the ballot audit and will ensure the minimum requirements for procedural audits (at least 1 per county) are observed.

Following the 2022 November general election, Michigan conducted its first statewide ballot audit. Michigan utilized Arlo, the same software program it (and other states) used previously to randomly select precincts from jurisdictions across all 83 counties. The Governor race was also selected to be hand counted during the ballot audit due to its importance and appearance on every ballot.

A total of 4,496,725 votes for Governor were cast statewide. Michigan aimed for a risk limit of no higher than 10, (essentially 10 percent), which is the industry standard.

Certified election results for each precinct in the state were entered into the Arlo program by county election officials. Arlo then randomly selected batches for audit. County and local election officials performed hand counts of the ballots and counties entered these tallies into Arlo for statistical analyzation. Completion of the hand count of 27,656 ballots resulted in the following differences in votes for candidates in the Governor race:

- The Gretchen Whitmer hand count reflected an increase of 9 votes compared to the tabulated total.
- The Tudor Dixon hand count reflected a decrease of 3 votes compared to the tabulated total.
- The Kevin Hogan hand count reflected a decrease of 1 vote compared to the tabulated total.
- The hand counts of Mary Buzuma, Daryl Simpson and Donna Brandenburg reflected no change to the tabulated total.

Slight differences between machine count and human hand count are normal, as explained earlier in this report. Even without conducting a statistical review, these very small differences (single-digit differences in a sample of nearly 30,000 ballots) demonstrate the accuracy of tabulation equipment.

The statistical findings⁸ further bolster confidence in the certified results. Arlo calculated that the ballot audit was able to easily surpass the limit of 10; upon further calculations, the number of ballots reviewed allowed the audit to reach a risk limit of 1 (essentially rounded to 1 percent). Using statistical methodology, it is virtually impossible to achieve a lower risk than this without conducting a full recount of the entire state. Although such a low-risk limit may not be possible in further elections with closer margins, the limit met here does demonstrate the capability of the ballot audit methodology in demonstrating a high confidence in election results based on a relatively small sample size (about 6 percent of ballots cast in the race were reviewed).

Additionally, because batch (precinct) totals were also able to be compared to the tabulator totals for each precinct, clerks were able to show voters that there were no, or minimal, differences between the hand count and machine count in an audited precinct. The audit also included complete clerk participation, demonstrating the value of soliciting and incorporating clerk feedback, as well as conducting pilots in cooperation with clerks to find an effective ballot audit process that comes without significant training hurdles.

Conclusion and recommendations

Overall, Michigan's election system performed effectively in 2022, as demonstrated by rigorous pre-election testing and post-election reviews in the canvass, recount, procedural audit, and ballot audit processes. Elections demand a tremendous amount of preparation, training, and planning to be conducted effectively. Municipal and county election officials deserve recognition for their tireless work to prepare for the 2022 November general election.

Their work and attention to detail can be seen in the smooth conduct of an election under challenging conditions. The strength of the election community was tested on multiple fronts: Of the 7,297,900 active registered voters, 61.7% turned out to vote (a record in a non-presidential election, as noted earlier in this report). Voters cast votes for 7,332 candidates, 3 statewide proposals, and 542 local proposals.

Overall, 4,500,400 ballots were cast, of which 42% (1,886,269) were cast by absentee voters. This required significant ballot-tabulation efforts for absent voter counting boards while staffing busy in-person voting precincts. Because absentee ballots could not be tabulated until Election Day, and ballots were received up until 8 p.m. on election night, tabulating all absentee ballots and closing out polling places required work late into the night and the following morning.

Despite all of these complexities, 90% of the unofficial Election Day returns were submitted by 9:00 a.m. the morning after the election. The results of the recounts

⁸ Data is available here: <https://www.michigan.gov/sos/-/media/Project/Websites/sos/Elections/Ballot-Access/November-8-2022-General-Election-Statewide-Ballot-Audit.xlsx>

and audits show that the clerks performed their duties well and the voting machines accurately counted the hand-marked paper ballots.

Following the county and state canvasses, the partial statewide recount posed additional challenges for election officials. Although most recounts were smooth, there were several instances of disruptive or aggressive behavior by challengers at recounts. Some private individuals made threats of prosecution or demands that election officials be investigated for committing crimes, most often based on misunderstanding or ignorance of election processes.

Before, during, and after the election, misinformation about elections has continued to circulate, posing additional challenges for election officials throughout the election process. Clerks also continue to receive a high volume of record requests, often seeking duplicative records or records that do not exist, which takes away valuable time from election administration responsibilities. Nevertheless, clerks continue to focus on administering safe, secure, and fair elections and have been successful in doing so.

Legislative recommendations

The Bureau appreciates the enactment of legislation allowing local clerks to process and tabulate absent voter ballots prior to Election Day, as recommended by the Bureau's Audits of the November 3, 2020 General Election Report. Although this was not in effect for 2022, it will be vitally important in 2024 and beyond. As more Michigan residents move to absentee voting, this will allow unofficial election night results to be reported much earlier (as is done in states like Florida and Ohio, which can tabulate before Election Day), and also reduce errors in processing AV ballots because clerks could assign fewer, more experienced staff to process ballots.

Several additional changes remain necessary to facilitate improved election administration and post-election reviews. The election calendar should be adjusted, and county canvassers need more time to complete canvasses. A more equally-spaced calendar would allow for audits to be conducted after the summer (currently August) primary election, which is difficult, if not nearly impossible, to do under current timelines.

Additionally, canvassers have less than two weeks to review pollbooks, tabulator tapes, other election documentation and to attempt to balance all out-of-balance precincts in the county. Counties have the same number of canvassers and number of days regardless of the population of the county or the number of local jurisdictions, and county clerks typically have limited election staffs. Particularly in large counties, canvassers need at least another week to complete the canvass. An adjusted calendar would allow for the additional canvassing time.

Michigan's recount statutes should be modernized. Recountability standards are antiquated and should be reevaluated. Currently, if the number of ballots tabulated or number of voters in the pollbook does not match the number of ballots to be recounted in a precinct and it cannot be explained, precincts and absent voter

counting boards often cannot be recounted. This makes little sense, particularly if a hand recount would make a difference in the outcome larger than the margin by which the precinct is out of balance. While other requirements for recountability (such as a sealed ballot containers) make good sense, the hyper-strict requirements that counting boards or precincts be perfectly balanced for a recount reduces, rather than increases, the ability to utilize post-election remedies to address Election Day errors.

Finally, recount statutes should be adjusted to ensure that recounts are utilized only when they have a realistic chance of changing the outcome. Recounts requested to “prove a point” rather than assess whether the correct outcome was reached should be dissuaded. Election officials used a large amount of taxpayer money and valuable time to conduct a partial statewide recount of two statewide ballot proposals in which the total number of ballots recounted was lower than the statewide margin for either proposal (that is, the recounts had zero chance of changing the outcome). Although the recount did verify that tabulators worked correctly and identified some areas for election process improvement, this is already done more comprehensively and effectively by the audit process. The Legislature should adjust recount statutes to align both candidate and proposal recounts with realistic challenges to election outcomes, minimizing recounts that serve little purpose while preserving the ability to recount close races.

Bureau updates and improvements

As noted earlier in this report, the Bureau identified several areas for improvement in clerk and election inspector training based on the audit findings. The Bureau will continue to work to develop programs that can more efficiently assign individual clerks training based on the results of a procedural audit.

The Bureau is also reviewing forms and written instructions to help reduce the possibility of error (for example, re-designing ballot container seal certificates). The Bureau will also continue to work to improve electronic pollbook functionality and user experience to help prevent human error by election inspectors.

The Bureau will incorporate the most frequently missed or inaccurate procedures into its upcoming trainings. With the passage of Proposal 2022-2, the Bureau will also need to develop and incorporate early voting procedures into its audit structures.

APPENDICES: RECOUNT RESULTS AND AUDIT LIST
