

Methodology for Determining Treasury Fee Charges – Summary

Objective:

To accurately reflect investment management costs associated with state restricted funds

Methodology:

Calculated by multiplying the basis points, determined by activity level by the Bureau of Investments, and the total value of State managed investments for each fund.

- There are 3 levels of activity or ‘tiers’ defined by the Bureau of Investments, based on the level of effort (average, above average or high) required by each agency.
- The State managed investment value is the fund’s average daily balance plus the market value of non-cash investments

Responsibilities:

Bureau of Investments

1. Provides data on funds that receive common cash earnings and funds that have other assets, in addition to common cash earnings.
2. Assigns each fund a tier level, based on maintenance requirements established by each department and the level of activity required to be performed by the Bureau of Investments.

Budget Division

1. Assess funds to be charged, based on materiality of the average daily balance.
2. Calculates the investment fee to be charged to each fund, based on tier levels as assigned above by the Bureau of Investments.
3. Spreads economic factors, determined by DTMB’s State Budget Office, and administrative overhead for the Department across all funds as the ‘administrative fee’.
4. Calculates the Treasury Fee by adding the investment fees and administrative fees for each fund.
5. Prepares and distributes the Treasury Fees report, listing each fund charged and the amount, by agency, as required by boilerplate.

Office of Accounting Services

1. Bills each department for their portion of the Treasury Fees.

Methodology for Determining Treasury Fee Charges – Detail

1. Receives 'Common Cash Average Daily Balance' report annually from the Bureau of Investments, Trust Accounting Division after the close of the fiscal year. A spreadsheet is created showing 'average daily cash balance' in all funds that receive common cash earnings (except noted exceptions). The average daily balance for the fiscal year is calculated. (If a fund was established for the entire year, adds each quarter and divides by 4. If a fund was established during the year, adds each quarter for which the fund was established and divides by that number of quarters. For example, if a fund was established during the second quarter (ending March 31st), divide the total by 3, as the fund was active during the second, third and fourth quarters. If the fund was established in the third quarter, divide the total by 2. If the fund was established in the fourth quarter, divide the total by 1. Note: average daily balance for the year is based on absolute values.)
2. Receives 'Investment and Cash Position' reports monthly from the Bureau of Investments, Trust Accounting Division. Creates spreadsheet showing the total 'market value' of investments (less State Treasurer's Common Cash, which is the amount in step 1) for the funds that have other assets (such as bonds, certificates of deposit, commercial paper, securities, etc.) for each month of the fiscal year. The average monthly balance for the year is then calculated (by dividing the total for all months by 12).
3. Adds 'average daily balance' and 'market value' to get a total market value of investments for each fund that will be assessed a 'treasury fee'. Note: Treasury fees consist of investment fees that support activities performed by the Bureau of Investments and administrative fees that support overhead operations within the Department of Treasury.
4. Each fund is assigned a tier level, determined by the Bureau of Investments and are as follows:
 - Tier 1 = 2 basis points Average maintenance (Common cash earnings only)
 - Tier 2 = 3 basis points Above average maintenance (Common cash + Gov't. Bonds)
 - Tier 3 = 5 basis points High maintenance (Common cash + Corp Bonds/Equities)

1 basis point = 1/100% or .0001

The basis points are used in the calculation of the investment fees portion of the Treasury Fees. The investment fee is calculated by multiplying each fund's total value of investment by the basis points assigned using the tier levels above.

5. Each fund is also assessed an administrative fee, which includes overhead expenses and economic factors. Economic factors are added to the prior fiscal year's appropriation of Treasury fees by the DTMB State Budget Office. The economics and overhead are distributed over all funds. This amount changes each year.
6. The investment fee calculation and the administrative fee calculation are added together to obtain the 'Treasury Fee' charged to each fund. The figures are rounded to the nearest hundred.
7. Each department is billed for their portion of the Treasury Fees.
8. A report is prepared and distributed, in accordance with boilerplate section 931, listing each fund charged and the amount, by agency.
