FOUNDATIONS

SECTION UIP 1

FOUNDATION COSTS

Foundation costs include all labor, materials and equipment, plus overhead and profit for the installing contractor.

All foundations are normally below the level of the lowest floor. If the building has a basement, the basement floor is the lowest floor. Whether there is a basement or not, the cost of foundations should be included in all buildings. These costs, converted to a Segregated Cost basis, are in Sections SEG 1 through SEG 6 for the various types of construction and building occupancy and they include an allowance for foundation excavation and backfill. Basement excavation must be priced separately.

In Section UIP 1, foundation costs are directly related to size and composition, but not to occupancy. Specific foundation costs can be developed using this section. Foundation costs may normally comprise excavation or trenching, concrete footing, foundation wall, waterproofing and drain tile.

Foundation and frame costs are dependent on the total weight that must be supported. The foundation cost for a one story with basement building is approximately the same as for a two story building without a basement. In using the Segregated Costs, the total area including basement, which is supported, must be used in order to develop a reasonable cost.

Buildings with heavy floor loads, such as warehouses, must have larger foundations than lighter structures. Also buildings with greater wall heights or heavier walls must have heavier foundations even though they have comparable floor areas.

Buildings with slab floors constructed on the ground usually have lighter foundations. In light construction where heavily insulated shallow foundations are employed, these buildings may have very little foundation; however, a cost of 40% to 60% of the normal foundation cost should be included to allow for perimeter footings and preparatory work not included in the slab cost. In these areas, ordinary foundation costs may be 40% lower than in the conventional deep foundations. Where the slab and footings are poured simultaneously (monolithically poured) and form one unit, the costs will be lower.

HILLSIDE CONSTRUCTION

Buildings located on hillsides have added costs because of the more extensive underground footings, the higher foundation walls required on the low side, the difficulty of construction on steep slopes, added excavation and the additional cost of transporting materials to the site. In addition, there is usually a great deal of site preparation, which must be estimated separately.

The costs of hillside foundations can run up to more than five times as much for a similar building on flat land. Generally, reinforced concrete foundation costs will run 150% to 200% more than the costs for normal footings and walls listed on Page 2. Beam and column supports will cost 25% to 75% more than those shown on Pages 7 and 8. Hillside screen walls (finished one side) can be built-up from Section UIP 5.

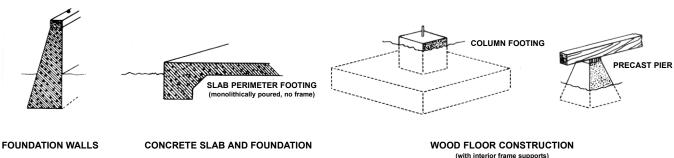

SUBTERRANEAN CONSTRUCTION

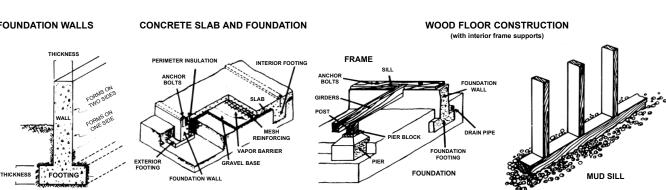

Earth sheltered residences and similar buildings usually require additional waterproofing; this includes materials similar to those used on roofs and exterior walls of standard structures above ground. These costs can be found on Page 3 of this section.

WOOD FOUNDATIONS

The mineral content of soils, in certain areas, makes treated wood a viable and desirable alternative to concrete and concrete block for underground foundation walls (including full basements). Costs for these types of walls are on Page 3 of this section.

Mudsills are a substandard construction practice of resting a wood frame directly on the earth. This is not to be confused with current terminology, where the term refers to the first wooden framing member that is in direct contact with a foundation stem wall or slab, to which it is attached by anchor bolts or power pins. In this case as well as where the frame rests on light wood blocking, there is little or no foundation cost and it is often included in the frame cost. In some areas a so called concrete mudsill is used, which is merely a thin layer of concrete spread under the frame to remove it from contact with the earth and give a level bearing surface. This cost is usually negligible.

FOUNDATIONS

SECTION UIP 1

BULK CONCRETE FOR FOUNDATIONS

(in place)

	LOW	AVERAGE	GOOD
Concrete, plain (cubic foot)	\$ 7.02	\$ 8.22	\$ 9.35
Concrete, reinforced (cubic foot)	8.95	10.60	12.55
Concrete, reinforced deep caissons (cubic foot)	16.40	21.70	28.25
Forms, surface area (square foot)	3.91	5.39	7.31
Concrete, piers, precast residential (each)	10.60	22.95	49.25

MISCELLANEOUS SITE PREPARATION

SITE CLEARING . . . Cost per acre. Does not include demolition.

	COST RANGE
Level with light grass	\$ 625 - \$1,170
Rolling with medium brush and small trees	1,170 - 2,490
Steep with heavy growth and trees	2,725 - 5,350
General lot grading, cut and fill, etc., is listed in the sections	Segregated Cost

SOIL STABILIZATION . . . Cost per square yard.

	COST	RANGE
Lime stabilization	\$ 5.39 -	\$ 10.50
Gabions filled with stone	81.00 –	245.00
Riprap	79.00 –	110.00
Geotextile fabric	.61 –	4.53
Synthetic matting	9.92 –	17.00
hexagonal matrix	11.90 –	19.55
rigid with integral drain	14.15 –	22.05

BULK EXCAVATION . . . Cost per cubic yard, includes allowance for one mile haul, disposal and return. For each additional mile add \$2.32 to \$3.79.

	COST RANGE
Soft earth	\$ 4.48 - \$ 6.23
Medium earth	4.87 – 6.85
Hard earth	5.39 – 7.37
Clay or adobe	8.22 – 11.50
Loose rock, hardpan or sand (requiring shoring)	9.35 – 15.30

Excavation by hand costs \$35.00 to \$74.00, per cubic yard.

UTILITY TUNNELS

Costs of tunnels carrying utilities between buildings will vary greatly depending on the depth of the tunnel and the soil type, but the following costs are smoothed averages of reinforced concrete lined tunnels per cubic foot of tunnel, including lighting and drainage.

Wall Thickness	Light Soil	Medium Soil	Hardpan	Rock
3" - 5"	\$20.50	\$22.55	\$24.85	\$27.25
5" - 7"	24.00	27.00	29.50	32.75
7" – 10"	28.00	31.25	35.25	39.25

TRENCHING

Cost per linear foot, includes chain trencher and operator.

Soft Earth	Medium Earth	Hard Earth
\$.77	\$.89	\$.95
.79	.91	.97
1.30	1.55	1.66
.95	1.10	1.19
.97	1.15	1.25
1.65	1.92	2.06
	\$.77 .79 1.30 .95	\$.77 \$.89 .91 1.30 1.55 .95 1.10 .97 1.15

TRENCHING

Cost per linear foot, including backhoe, operator, backfill and compaction. Bucket sizes vary and costs may vary plus or minus 50%.

Width x Depth	Soft Earth	Medium Earth	Hard Earth
24" x 2'	\$ 1.49	\$ 1.68	\$ 2.53
24" x 4'	2.97	3.34	5.08
36" x 3'	3.35	3.71	5.64
36" x 6'	6.73	7.47	11.35
36" x 8'	8.92	9.92	15.00
48" x 3'	4.46	4.97	7.51
48" x 4'	6.01	6.61	10.05
48" x 6'	8.66	9.92	15.25
48" x 8'	11.75	13.20	20.40
72" x 4'	9.13	10.25	15.80
72" x 8'	17.70	19.65	30.00

EARTH WORK

SECTION UIP 1

EXPLANATIONS

DEFINITION

Frames are independent structures which hold up the floors and roof of a building. In many cases they will also support or brace the walls. Frame costs are listed in the Segregated Cost sections.

Bearing walls and partitions are priced under Walls and Interior Construction, respectively. In addition, some buildings with bearing walls have floor supports for wood floors, which are priced separately under Frames in the Segregated Cost sections.

Pilasters and bond beams for bearing walls are priced under Walls as an additional wall cost.

Roof trusses are priced under Trusses and Girders in the Segregated Cost sections. When a complete frame cost is used, generally the trusses or girders would be included as the horizontal members of the frame. In certain cases, a low frame cost (Rank 1) could be used to account for just the vertical portions, and then the appropriate truss or space frame cost could be priced separately.

BEARING WALLS

A bearing wall is constructed to support the weight of the floors or roof above. In addition, in many buildings the interior walls will aid in supporting the roof and floors. In the case of a bearing wall, the costs given under Walls in the Segregated Cost sections are all-inclusive, with an average amount of wall materials, windows, doors, plaster, paint, etc., commensurate with the classification. Since this cost is complete, no further charge is made for supporting structure except for pilasters and bond beams, which are listed under Concrete or Masonry Walls, or floor supports, which are listed separately under Frames in the Segregated Cost sections.

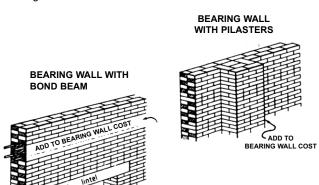

If bearing walls are used in part, they will substitute to that extent for the frame, and the frame cost is reduced accordingly, as described to the right.

PILASTERS

Brick and concrete walls are often strengthened with added thicknesses forming columns at intervals. Often the roof trusses will bear on these columns or pilasters, which are priced as an additive to the bearing wall cost in the Segregated Cost sections.

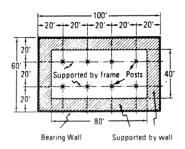

BOND BEAMS

Masonry walls also may be strengthened by horizontal concrete beams, bonded to the bricks or concrete blocks, which distribute vertical loads. These costs are also found as an additive to the bearing wall costs.

PARTIAL BEARING WALLS

When a building has a combination of frame and bearing walls, it is more accurate to first price the bearing walls with pilasters and bond beams and then price the frame on the basis of the area supported by the frame, or to price the columns and girders separately. In the drawing below it is assumed that each wall supports the roof halfway to the posts or columns as shown by the shaded area. Therefore, the balance is supported by the frame. For this example, assume a frame cost from the Segregated Cost section of \$3.66 per square foot.

Area supported by frame = $40' \times 80' = 3,200 \text{ sq. ft.}$ Total area supported by walls and frame = $60' \times 100' = 6,000 \text{ sq. ft.}$ Percentage of total supported by frame = 53% ($3,200 \div 6,000$). $.53 \times \$3.66 = \1.94 per square foot of total area for the frame cost including pipe columns or posts and girders.

The table below indicates approximate percentages which may be used in lieu of this computation.

PARTIALLY FRAMED BUILDINGS

If a building is supported partially by frame and partially by bearing walls, and the exact proportion is difficult to determine in the manner shown above, then the following table may be useful. The distances listed are the smallest dimension between bearing walls.

SHORTEST DISTANCE	PERCENTAGE OF FRAME COST	SHORTEST DISTANCE	PERCENTAGE OF FRAME COST
30'	30%	75'	60%
40'	40%	90'	70%
50'	50%	120' and over	75%

EXAMPLE

This building is $60' \times 100'$ without interior bearing walls; therefore, the shortest dimension is 60'. If there were an interior bearing wall like that shown by the broken line, the shortest dimension would be 50'.

	100'		
60'	0 0	0 0	
00	0 0	0 0	
	50'	50'	

From table above: 50' span, use 50% of full frame cost. 75' span, use 60% of full frame cost.

By interpolation 60' span, use 54% of full frame cost.

FRAMES SECTION UIP 1 EXPLANATIONS

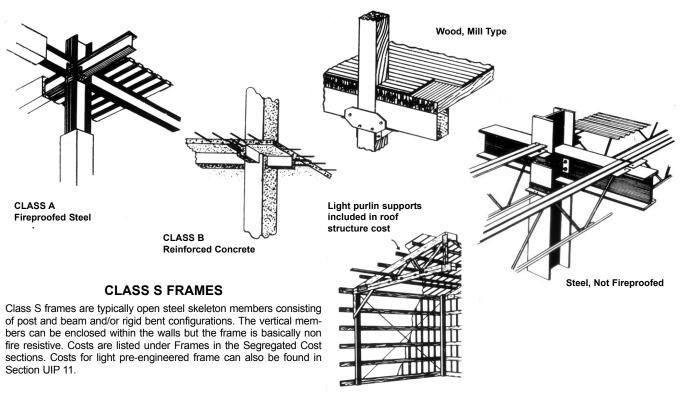

CLASS A AND B FRAMES

Class A and B frames are of fireproof construction, steel or concrete. In these buildings, especially in composite construction, there must be some arbitrary breakdown between roof, floors, walls and frame. This has been done by making the frame costs residual to the costs of other elements of the building shell, or in other words, the frame costs include all supporting structure costs which are not charged to the wall, roof or floors.

The walls of Class A and B buildings may rest on the frame or may be hung on it, and usually bear no more than their own weight. These are known as curtain walls since they merely enclose space.

CLASS C AND D FRAMES

Class C and D buildings may also be of framed construction where an independent frame supports the floors and roof, and if all walls and partitions were removed, the skeleton would still stand insofar as vertical loads are concerned. This frame may consist of wood or steel posts and girders, wood poles, Glulam arches, etc. The vertical members can be encased in fire resistive coverings or enclosed within the walls. It is often called an open frame since it lacks the complete fire resistance of a Class A or B frame. Costs are listed under Frames in the Segregated Cost sections and further descriptions and pictures may be found in the introduction.

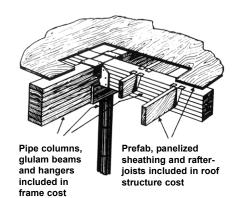

Rigid tapered plate frame

Columns, beams and ties included in frame cost Wall cover, girts. and windows, included in wall cost

Post and beam frame

CLASS D Pole Frame (posts and prefab. trussed rafters)

FRAME COSTS

SECTION UIP 1

WOOD BEAMS AND COLUMNS

Average cost, in place, per linear foot, including bolts, gussets and miscellaneous ties. For other sizes, use the equivalent cross section. For finished and wrapped or treated structural lumber add 10% to 20%.

SIZE	TIMBER	BUILT UP	SIZE	TIMBER
4" x 4"	\$ 4.36 - \$ 4.98	\$ 4.36	8" x 24"	\$ 55.00 -\$ 62.00
4" x 8"	7.88 – 9.97	7.99	10" x 10"	26.25 - 30.50
4" x 12"	11.55 – 13.60	11.85	10" x 20"	48.00 - 56.00
6" x 6"	9.06 - 11.45	9.63	10" x 30"	74.00 - 80.00
6" x 10"	14.85 - 18.05	15.50	12" x 12"	37.50 - 43.50
6" x 14"	20.70 - 24.35	19.45	12" x 24"	68.00 - 76.00
6" x 20"	29.50 - 34.25	25.75	12" x 36"	105.00 - 120.00
8" x 8"	16.05 - 20.85	18.30	14" x 14"	53.00 - 60.00
8" x 12"	26.50 - 30.75	23.80	14" x 28"	105.00 - 110.00
8" x 16"	35.75 - 41.50	29.25	16" x 32"1	50.00 - 175.00

For posts and girders supporting the floor structure of the first floor, use costs above, deducting 15%.

WOOD GLULAM BEAMS

Average cost, in place, per linear foot, including erection, hangers and miscellaneous connectors. For other sizes, use the equivalent cross section. For finished and wrapped lumber add 10%.

SIZE	COST	SIZE	COST	SIZE	COST	SIZE	COST
3" x 9"	\$17.00	7" x 15"	\$38.50	9" x 21"	\$ 82.00	11" x 21"	\$105.00
3" x 12"	20.20	7" x 18"	45.25	9" x 24"	94.00	11" x 24"	120.00
3" x 15"	23.50	7" x 21"	52.00	9" x 27"	105.00	11" x 27"	135.00
5" x 12"	26.00	7" x 24"	59.00	9" x 30"	120.00	11" x 30"	145.00
5" x 15"	30.75	7" x 27"	66.00	9" x 33"	130.00	11" x 33"	155.00
5" x 18"	35.50	7" x 30"	73.00	9" x 36"	140.00	11" x 36"	170.00
5" x 21"	39.25	7" x 33"	79.00	9" x 39"	150.00	11" x 42"	200.00
5" x 24"	42.75	9" x 18"	72.00	9" x 42"	160.00	11" x 45"	215.00

WOOD POLE FRAMES

Average cost, in place, per linear foot above ground for pressuretreated columns. Add wood trussed rafters from Section UIP 7. For untreated lumber, deduct 10%.

4" x 4" posts	\$4.59 - \$6.26	6" x 6" posts	\$ 7.93 - \$ 9.46
4" x 6" posts	5.67 - 7.37	6" x 8" posts	10.55 - 12.30
8" x 8" posts	12.90 - 14.75	12" to 14" poles	20.85 - 31.25

WOOD SILLS

Average cost, in place, per linear foot of bolted, pressure-treated or redwood sills. For sill sealer add \$.40 to \$.57 per linear foot.

2" x 4"	\$2.15 - \$2.66	2" x 6"	\$3.06 - \$3.79
2" x 8"	4.31 - 4.59		

REINFORCED CONCRETE COLUMNS

Average cost per linear foot. The amount of reinforcement can vary considerably based on the weight supported, and costs may vary plus or minus 15%.

CIRCULAR COLUMNS		ADD FOR	SQL	JARE COLUMNS
DIA.	COST RANGE	CAPS (each)	DIA.	COST RANGE
12"	\$ 34.25 - \$ 46.00	\$295	12"	\$ 47.25 - \$ 59.00
14"	43.25 - 59.00	320	14"	57.00 - 73.00
16"	52.00 - 72.00	345	16"	67.00 - 88.00
18"	61.00 - 87.00	360	18"	78.00 - 105.00
20"	72.00 - 100.00	395	20"	90.00 - 120.00
24"	92.00 - 135.00	450	24"	110.00 - 155.00
28"	110.00 - 165.00	535	28"	140.00 - 190.00
32"	140.00 - 210.00	610	32"	165.00 - 230.00
36"	165.00 - 245.00	695	36"	185.00 - 275.00

For ornamental nonbearing columns, see Section UIP 6.

REINFORCED CONCRETE BEAMS

Cost per linear foot, includes erection and ties. For other sizes, use equivalent cross section. Add 10% for stressing.

SIZE	COST RANGE	SIZE	COST RANGE
4" x 6"	\$14.75 - \$22.05	10" x 18"	\$49.25 - \$63.00
6" x 8"	24.35 - 34.00	12" x 16"	53.00 - 65.00
8" x 10"	34.00 - 48.00	12" x 20"	58.00 - 73.00
10" x 12"	44.00 - 52.00	12" x 24"	64.00 - 79.00

PILASTERS AND BOND BEAMS

Average cost in place per linear foot.

BLOCK (BOND BEAMS)	CONCRETE	MASONRY (PILASTERS)
\$12.20 - \$17.00	\$24.65 - \$39.75	\$31.25 - \$47.00

PIPE AND TUBE COLUMNS

Typical cost range, per linear foot, including ancillary items and/or welding.

SIZE	ROUND COST RANGE	SIZE	SQUARE COST RANGE
3"	\$ 28.25 - \$ 34.25	3"	\$ 27.75 - \$ 34.75
4"	36.50 - 44.75	4"	35.00 - 46.00
6"	53.00 - 65.00	6"	52.00 - 67.00
8"	71.00 – 87.00	8"	68.00 - 89.00
10"	87.00 - 105.00	10"	84.00 - 110.00
12"	105.00 - 130.00	12"	100.00 - 135.00

Add \$.33 to \$.49 each inch of diameter per linear foot for concrete fill. Adjustable jack columns for residential basements cost \$61.00 to \$105.00 each.

FRAME COSTS

SECTION UIP 1

PRE-ENGINEERED STEEL FRAMES

Costs are for industrial type integral roof and wall column truss frames including ties, connections and/or welding. Design loads vary and costs may vary by plus or minus 25%.

TYPE		C	OST – EA	CH TRU	ss	
Span	20	30	40	50	60	80
Open-web tapered truss	. \$1,300	\$1,650	\$2,180	\$2,725	\$3,350	\$5,300
Post and web truss	. 1,420	1,750	2,230	2,850	3,650	5,550
Post and beam .	. 1,480	1,870	2,440	3,050	3,825	6,000
Tapered plate	2,060	2,575	3,275	4,175	5,250	8,350

Add 4% for high profile (4:12 roof slope) buildings.

Add or deduct 4% for each foot of deviation from 14' base eave height.

STEEL

(Wide Flange "H" and "I" Beams)

Average cost per linear foot. Steel weights and types vary considerably and costs may vary from a plus 50% to minus 25%. Beams are designated by web length, where the flange width at each end increases the beam weight and cost as the flange gets larger.

Example: W8 cost range

Low, 15# per linear foot "I" beam, 8" web, 4" flange

High, 40# per linear foot "H" beam, 8" web, 8" flange

SIZE (web length)	COST	RANGE	SIZE (web length)	COST RANGE
3"	\$28.25	- \$ 29.75	18"	\$87.00 - \$140.00
4"	33.75	- 39.75	21"	100.00 - 145.00
5"	39.25	- 45.25	24"	110.00 - 155.00
6"	44.00	- 52.00	27"	125.00 - 165.00
8"	47.00	- 67.00	30"	140.00 - 240.00
10"	52.00	- 87.00	33"	150.00 - 250.00
12"	59.00	- 110.00	36"	160.00 - 295.00
14"	69.00	- 125.00		

For trusses, see Section UIP 4, Roofs.

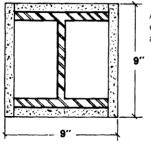

FIREPROOFING

The following are average costs per square foot of covered or enclosed area for fireproofing of structural steel.

TYPE OF ENCASEMENT	1 HR.	FIRE F 2 HR.	RATING 3 HR.	4 HR.
Sprayed fiber, beams	\$ 1.99	\$ 2.89	\$ 3.28	\$ 3.74
columns	2.61	3.91	5.15	6.40
Drywall	7.31	9.86	11.85	13.40
Lath and plaster	11.00	13.95	15.85	17.65
Concrete	12.15	15.15	17.05	18.70
Masonry units		11.90	15.30	18.05

Sprayed fiber on underside of decking costs \$1.65 to \$2.10 per square foot.

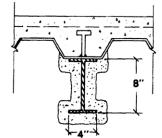

To convert the amount of covered area to a cost per linear foot, add up the total number of covered sides and divide by 12 inches.

A Wide-Flange "H" Column (W8 x 40#) enclosed by drywall boxed all around with a 2-hour fire rating.

$$\frac{9 + 9 + 9 + 9}{12} =$$

3.00 sq. ft. x \$9.86 = \$29.58 /LF

A Wide-Flange "I" Beam (W8 x 15#) covered by sprayed fiber all around except for one flange side with a 3-hour fire rating

$$\frac{8+4+4+8+4}{12} =$$

2.33 sq. ft. x \$3.28 = \$7.64 /LF

SECTION UIP 2

INTERIOR PARTITIONS

Costs are averages for wall construction only, per square foot of wall area of nonbearing partitions. Additions should be made for doors from the Interior Door table without deducting for the areas of the openings. See Section UIP 5 for basic walls, wall covers, insulation and finishes not shown here. For shear walls or double layers of gypsum or sound board, add costs from the Sheathing category found on Page 4 of Section UIP 5.

MASONRY

				PLAS	TER	
TYPE	UNFIN	NISHED	ONE	SIDE	TWO S	DES
Clay tile, 4"	\$ 9.15 -	\$10.50	\$11.35 - 3	\$14.10	\$13.50 -	\$17.50
6"	10.65 -	12.45	12.70 -	16.00	14.90 –	19.50
8"	12.00 -	13.35	14.10 -	16.80	16.15 –	20.35
Concrete block,						
2" solid	6.17 –	7.74	8.36 -	11.20	10.45 –	14.70
4" solid	7.02 –	8.75	9.36 -	12.40	11.45 –	15.80
6" solid	8.36 -	9.93	10.50 -	13.35	12.60 -	16.85
4" hollow	6.85 -	8.47	8.97 –	12.00	11.10 –	15.45
6" hollow	7.85 –	9.15	9.98 –	12.70	12.00 -	16.20
8" hollow	8.64 –	10.20	10.85 –	13.70	12.80 –	17.30

NOTE: For gypsum board, deduct \$.37 to \$.79. For furring, add \$1.00 to \$2.24.

For glazed block or tile, add \$5.95 to \$8.24 for each glazed side.

FRAME

TYPE	2½" – 3"	WALL	4" WA	LL	6" W	۱LL
Steel studs,						
Plaster one side	\$4.37 - \$	8.59	\$4.49 - \$	8.75	\$4.49 -	\$ 9.15
Two sides	6.85 -	13.65	6.96 - 1	14.00	6.96 -	14.30

Gypsum board						
One side	3.54 -	5.38	3.60 -	5.61	3.60 -	5.99
Two sides	4.82 -	7.02	4.88 -	7.41	4.88 -	8.08
Solid wall	7.91 –	9.87				
NOTE: Add insulat	ion to sol	id wall f	or 4" shaf	t wall c	cost.	
Wood studs,						
Plaster one side	3.54 –	5.28	3.69 -	5.72	3.60 -	6.29
Two sides	5.90 -	8.86	6.17 -	9.36	5.78 –	9.98
Gypsum board						
One side	2.35 -	3.54	2.58 -	3.81	2.53 -	4.49
Two sides	3.81 –	5.04	4.16 -	5.61	3.81 –	6.23

NOTE: For staggered studs on 2" x 6" plate, add \$1.26 per square foot to 4" wall.

For lead lined lath, add \$10.10 to \$24.90 per square foot.

For gypsum green board (wet walls), add \$.17 per square foot per side.

MISCELLANEOUS

TYPE	COST RANGE	
Glass block, white or aqua	\$ 38.00 -	\$ 53.00
Color and intaglio	52.00 -	71.00
Folding partitions, wood and plastic	16.50 -	25.25
Acoustical	40.00 -	84.00
Add for electrical operation	22.45 -	24.40
Movable office partitions, hardboard/plastic	10.35 –	15.65
Softwood/plywood	12.35 –	20.80
Hardwood	18.80 –	29.50
Metal partitions, single thickness	14.90 –	23.25
2" insulated	16.50 –	27.75
3" insulated	18.80 –	28.50
add for glazing	1.35 –	2.58
Clear glass, full height	27.00 -	70.00
Frameless, structural glazing	210.00 -	270.00
Metal channels, 21/4" gypsum	8.41 –	12.35
Cement fiber panels	13.45 –	24.40
Woven wire, including doors	7.29 –	14.30
X-ray viewing, clear-opaque		
Lead-plastic panels	190.00 -	310.00
For hospital privacy curtains, see Section UIP 12	, Page 3.	

TOILET PARTITIONS

Average cost of each unit completely installed, including door. For privacy screens use the low side of the price range, deducting 10% to 20%. For stall shower with dressing cabinet, use high side of the price range plus 50% to 75%.

TYPE	COST RANGE	
Laminated plastic	\$ 675 -	\$1,300
High-density solid plastic	955 –	1,830
Marble or Corian	1,120 -	1,970
Metal, baked enamel	700 –	870
Stainless steel or porcelainized	985 –	2,020
Wood	420 -	895
For grab bars, add \$68.00 to \$160.00 each.		

INTERIOR DOORS

Average cost in place per square foot of door opening, including hardware.

Accordion Bypass folding Cafe (bar) doors Blush doors	\$13.20 - 8.02 - 16.25 -	16.35
Flush`doórs, hollow core:	8.97 – 24.40 – 23.80 – 14.30 –	12.65 35.00 30.75 21.60
add for solid core add for raised panel door add for decorative pattern or carved add for metal frame	3.09 – .93 – 27.25 – 2.18 –	4.32 6.46 41.75 4.32
add for lead–lined frame add for lead–lined door or glass add for glass areas add for Underwriters' label	30.75 – 54.00 – 9.81 – 8.02 –	41.00 62.00 18.45 16.65
add for security locksets (restrooms, hotel/motel) card entry, excluding monitoring system French doors, wood Louver doors, wood Mirror wardrobe panels Add for automatic door closers, each	4.04 - 11.45 - 18.45 - 13.45 - 14.20 - 71.00 -	11.45 16.00 23.80 21.05 24.95 230.00

For panic hardware, see Section UIP 6, Page 6; smoke-activated closers, Section UIP 3, Page 12.

INTERIOR STAIRWAYS

Apply cost to each full flight of stairs. The following costs includestair framing, finish and railings. For staircases that have a large number of the same railings and balustrades along an open landing or balcony, increase cost by 20% to 30%. For partial flights use proportionate costs. For every foot of floor height above 10', add 5%. Custom curved or floating stairways are constructed of hardwood, hardwood with some tile or stone or with marble, with costs ascending in that order. The width of the staircase, landings if any, overall height, along with materials used, workmanship, and complexity of design (split staircase), must be considered when determining quality.

Disappearing attic stairs, slide-up pivot		
type, manual	\$ 560 -	\$ 2,020
Motorized	10,600 -	13,500
Folding type, wood	700 –	1,570
Aluminum	2,750 -	3,525
Telescoping access ladder	2,950 -	3,525
Spiral stairs, aluminum	3,525 -	6,450
Steel	3,125 -	6,800
Wood	4,925 -	7,400
Wood, residential, with balustrade,		
Softwood	1,300 -	4,100
Hardwood	1,790 –	6,850
Spiral or curved	4,850 -	15,200
Add or deduct 10% – 15% for each ft. deviation	n from 42" b	ase width.
Custom stairways, spiral	8,500 -	21,200
Curved	16,000 –	53,000
Floating	16,600 -	74,500

Add 15% for conductive flooring. For exterior decking, see Section UIP 13. Synth Section UIP 14.	etic sports surfa	aces, see

SECTION UIP 2

CEILING COSTS

(Cost per square foot)

Costs of ceilings, with the exception of suspended or dropped ceilings, do not include framing, as flat plaster on lath is usually supported by the bottom of the floor joists or roof structure. Painting or other finish typical of the quality and type of ceiling is included. For wallpaper, see Section UIP 5.

For finished buildings and residences, ceiling joists are considered in the roof structure costs. In plain buildings such as industrials and warehouses, no such allowance is made, and where a ceiling exists under a roof, the cost of ceiling joists must be added, as in all instances where special ceiling framing is needed.

A ceiling structure hung by wires or supports is a suspended ceiling, and the cost of the suspension system must be added, except as noted.

To convert costs to floor area for high-pitched ceilings, use the roof-slope multipliers from Section UIP 4.

TYPE	COST RA	ANGE
Acoustical ceilings, tile or panels:		
Metal panels, including pads		
and suspension system	\$ 6.46 -	\$15.15
Mineral fiber, fiberglass, tiles (1' x 1')	1.95 –	4.88
panels (2' x 2' or 4')	1.07 –	4.16
Mirror–faced panels	17.40 -	29.50
Organic fiber, wood or cane	1.74 –	3.30
Embossed metal	4.26 -	15.40
Fiberboard panels	1.40 -	2.58
Gypsum board, taped and painted	1.79 –	3.03
Spray-on, texture	1.74 –	2.69
Hardboard paneling, 1/4", decorative	2.47 -	5.67
Paint only, on bottom of roof or floor structure	.56 –	1.68
Plaster on lath: acoustical	3.54 -	6.40
Spray-on (thincoat w/texture) on lath	2.53 -	4.43
Standard, add 20% for Keene's	3.13 -	5.67
add for metal lath	.50 –	.93
Plaster on masonry soffit: acoustical	2.98 -	5.50
Spray-on (thincoat w/texture)	2.02 -	3.60
Standard, add 24% for Keene's	2.53 -	4.72
Plaster panels, reinforced, decorative	12.65 -	20.80
Plastic panels, including suspension system		
but excluding lighting (included in electrical co	ost) 5.44 –	12.80
Plywood paneling, softwood, 1/4" 3/8"	2.69 -	5.50
Hardwood, 1/4" 3/8"	3.87 –	8.70
Coffered or vaulted panel with molding	8.70 –	27.50

Add for ceiling structure which is not part of the		
roof or floor structure	1.35 –	3.13
Add for suspended ceiling, metal	1.23 –	3.03
Add for suspended ceiling, fiberglass	1.79 –	4.16
Add for suspended ceiling, hardwood decorative		9.36
Add for suspended ceiling, seismic supports	.18 –	.56
For ceiling insulation or exposed plank or deck,	see detailed	costs in
Section UIP 4.		
For art glass, see Section LIP 6		

For art glass, see Section UIP 6.

INTERIOR DECORATING

The following costs are for the highly specialized type of ornamental finishes associated with auditoriums, public buildings and some high-value theaters. These figures are generally included in the costs in the Calculator and Segregated Cost Methods. In some cases, however, it may be desirable to make separate estimates of ornamented interiors. If a figure on the ornamentation is desired, the method suggested is to multiply the total area of all decorated surfaces by the costs given below.

The assessor who uses these costs must ascertain the proper classification. As a guide, small or neighborhood cinemas will usually fit into the plain category, the medium–size theater will be in the average category and the expensive major theater will normally be in the expensive classification.

A study of the individual structures will enable the assessor to place the type of decoration in the cost range. Two or more of the classifications listed may be found in one building. Thus, a theater auditorium may be extensively decorated and the foyer relatively plain. Both the extent of the decoration and the relative cost of the medium employed should be considered.

PLAIN DECORATING... This consists largely of flat or plain color work, some border or cove stenciling, or a minimum of plaster staff or other ornamental medium.

\$4.37 to \$7.06 per square foot

AVERAGE DECORATING... This includes basic flat work and considerable ornamental treatment of openings, columns, beams and arch facings; also a limited amount of staff, terra cotta, marble or tile, such as for niches, plaques or crestings.

\$11.25 to \$31.75 per square foot

EXTENSIVE DECORATING... This ranges from the upper limit of the average class to the finest type wherein the surfaces are largely covered with intricate designs in expensive media.

\$40.00 to \$82.00 per square foot

Detailed costs for stone and marble veneers can be found in Section UIP 6.

Hand-painted murals by famous artists must be valued by a qualified art appraiser, but those by commercial or billboard artists usually cost \$75.00 to \$115.00 per square foot. Simple hand-painted stenciling will cost \$22.90 to \$46.00 per square foot.

Photo murals in black and white or sepia, pasted on the wall, will cost \$18.05 to \$32.25 per square foot. In color, the cost is \$44.50 to \$98.00.

Staff, stone or wood ornamentation will usually take the same depreciation as the building, but items of artistic merit may depreciate little, and ornamentation which is subject to wear may depreciate at a high rate. Works designated as having historical or artistic merit must be valued by fine arts specialists.

	07.00	0.0.00

NOTE: Equipment and cabinet costs for some occupancies can be found in Section UIP 12.

SECTION UIP 2

VAULTS

Costs per square foot of floor area for poured-in-place construction are based on an average eight foot ceiling height, exclusive of floors and doors, but including built in alarm systems, ventilators and interior finish. Add or deduct 2% for each foot of height variation.

TYPE	COST	RANGE
Security vault	\$170.00 -	\$270.00
Record storage	67.00 -	92.00

MODULAR VAULT SYSTEMS

Costs per square foot of floor area are based on an average eight foot ceiling height exclusive of floors and doors, but including built-in alarm systems, ventilators and interior finishes for solid precast panel construction. All modular vault systems shown are comprised of U.L. listed components. For other than ground level construction, add 30% to 40% for security vault systems comprised of laminated lightweight panels.

Security Vault Systems – Attack Resistance Rated Components

Class M	\$ 52.00 -	\$ 59.00
Class 1	59.00 -	82.00
Class 2	75.00 -	110.00
Class 3	125.00 -	145.00

Insulated/Record Storage Vault Systems – Fire Resistance Rated Components

1 Hour	\$43.75 -	\$57.00
2 Hour	53.00 -	59.00
4 Hour	58.00 -	71.00
6 Hour	70.00 –	82.00

VAULT DOORS

Costs for security vault doors include door delivered to premises and installed with time lock, day gate, sill and other hardware. Cost for insulated/record storage doors includes complete installation. Costs shown are for doors with clear opening of 78" high x 40" wide; reduce costs by 15% for doors 78" high x 32" wide. These vault doors are shown by U.L. listing. Older, unrated rectangular doors are shown in approximate equivalence to current U.L. listings. Circular doors are no longer made; the listed costs are normal at the time installed trended to date.

Socurity	Vault Doors	Attack-Resistance Rating
Security	vault Doors –	Allack-Resistance Rating

Class M (2" - 3" thick)

, , ,	,	, ,
Class 1 (3½" – 6" thick)	23,600 -	34,100
Class 2 (7" – 9" thick)	28,400 -	44,300
Class 3 (10" thick)	39,600 –	64,250
Insulated/Record Storage Vault Doors -	Fire-Resistance	e Rating
1 Hour	\$3,500 -	\$5,100
2 Hour	3,925 -	5,450
4 Hour	4,700 -	5,900
6 Hour	5,450 -	7,400
Circular Vault Doors – Thickness

5" x 10"		160 –	190
10" x 10"		250 –	335
5" x 16"		305 –	360
11" x 16"		495 –	735
22" x 16"		1,090 –	1,390
44" x 16"	(includes 4" base)	1,990 –	2,410

BANK FIXTURES

Costs for teller stations include teller cages, undercounter equipment, service counters, islands, alarm systems, and other equipment not listed individually on this page.

Cost per teller station	 \$9,150.00 -	\$12.300.00
Cool por tonor otation	 φο, ισσ.σσ	Ψ 12,000.0

Costs for hardened steel plates include complete installation with necessary accessories. Hardened steel plate, per square foot.

1/2"	 \$ 78.00 -	\$120.00
1"	 120.00 –	195.00
2"	 180.00 –	260.00

For security surveillance equipment, see Section UIP 3.

TRANSACTION EQUIPMENT

Night deposit chutes and boxes, each	\$12,600.00 -	\$24,100.00
Drive-up/walk-up windows, each	10,600.00 -	19,000.00
Vision window only, per station	2,270.00 -	2,675.00
Pneumatic drive-up system, excluding can	opy, window, ar	nd other
site improvements.		

For multiple installations: deduct 20% for second unit;

2% for each unit thereafter.		
Cost per station	21,900.00 -	39,000.00
Customer TV monitor systems,		
Per station	65,250.00 -	78,250.00
add for remote cameras, each	2,140.00 -	2,675.00
Automated teller machines		
Lobby/retail units, each	9,650.00 -	36,600.00
Drive-up/walk-up through-wall units,		
Stand-alone island units	26,500.00 -	58,000.00

For ATM structures, see Section UIP 11.

\$8,750 -

\$12,700

SECTION UIP 2

CLEAN ROOMS DEFINITIONS

Each clean room space is specially engineered based on how clean the room must be. Costs can vary greatly for each of the three basic cost ranges and should be used with caution. We would recommend that, wherever possible, actual contract costs be obtained.

Clean room space is subdivided into three types classifed by the number of particles of a certain size present in a cubic foot of air. The classifications used in this book are described below:

Type 1: Class 100,000 to 10,000. This cost range represents cleaned space that has no more than 100,000 to 10,000 particles of 0.5 microns or larger per cubic foot of air.

Type 2: Class 1,000 to 100. This cost range represents cleaned space that has no more than 1,000 particles of 0.5 microns or larger, to 100 particles of 0.3 microns or larger, per cubic foot of air

Type 3: Class 100 to 10. This cost range represents cleaned space that has no more than 100 particles no larger than 0.3 microns, to 10 or fewer particles of 0.12 microns or smaller, per cubic foot of air.

MODULAR ROOM ENCLOSURE SYSTEMS

Cost each, based on an average 8 foot ceiling height exclusive of floors or roof deck, but including downflow filtered air flow, lighting and ceiling panel and wall modules appropriate for the two enclosure types.

PREFABRICATED HARDWALL ROOMS

ROOM SIZE		COST RANGE	
(SQ. FT.)	Type 1	Type 2	Type 3
50	\$ 9,000	\$19,300	\$ 30,600
100	14,600	29,400	45,700
150	20,600	40,100	64,750
200	26,500	52,500	83,750
300	34,900	68,500	111,000
400	45,600	92,250	157,000

VINYL CURTAIN ROOMS

ROOM SIZE		COST RANGE		
(SQ. FT.)	Type 1	Type 2	Type 3	
50	\$ 4,925	\$ 7,400	\$ 21,800	
100	7,900	10,700	31,800	
150	11,200	15,600	46,500	
200	14,100	19,500	61,500	
300	18,900	27,000	80,500	
400	28,100	41,800	122,000	

For curtain tunnels and horizontal airflow, add 50% to 70%.

For pass-thru chambers, add \$465 to \$4,325.

Personnel air showers, 16 to 30 square feet, add \$17,600 to \$28,100 per unit.

CLEAN ROOM EQUIPMENT

COST EACH	COST RANGE		
Clean room storage cabinets, filtered	\$5,650 -	\$7,400	
Unfiltered	4,100 -	4,925	
Containment weigh station	6,600 -	8,950	
Work stations, laminated finish, horizontal lamin 3' to 5' long	5,650 –	-	

For table mount units without base cabinet, deduct 10%. For downflow units, add 10%; vertical recirculation or negative flow, add 25%. For polypropylene units, add an additional 100%. For wet stations without hood (air flow), deduct 40%.

For general laboratory equipment, see Section UIP 12.

MISCELLANEOUS INTERIOR ITEMS

UNIT	COST	RANGE
Building directories, 6 to 12 sq. ft., per sq. ft	\$ 180.00 -	\$ 480.00
12 to 24 sq. ft., per sq. ft	150.00 -	400.00
Mail chutes, per floor	2,850.00 -	5,200.00
Mail collection boxes, single, each	1,990.00 -	2,550.00
Double, each	3,125.00 -	4,475.00
Mail boxes, apartment type, 4 8 doors,		
Vertical, each door	43.75 –	120.00
Over 8 doors, each door	37.00 -	115.00
Horizontal, each door	49.25 –	75.00
Post office type, wall unit, each door	37.00 -	135.00
Free-standing, each door	8.70 -	24.70
Plaques, bronze, per square foot	320.00 -	590.00
Sound system, base cost	860.00 -	1,540.00
add per speaker, paging only	86.00 -	160.00
Music and voice	210.00 -	290.00
Telephone enclosures, wall hung	915.00 -	1,800.00
Full height	3,650.00 -	4,975.00
Handicapped, portable amplifiers	49.25 -	62.00
Telecommunicators	480.00 -	800.00
Television antenna system, per outlet	135.00 -	210.00
For waste/linen chutes, see Section UIP 9.		

KITCHEN UNITS

Average costs per linear foot of single-unit steel kitchens such as those found in motels, efficiency apartments, etc., containing sink, stove, oven and refrigerator. Add \$75.00 per foot for snack bar. For microwave oven see, SEG 2.

UNIT	COST R	ANGE
Base section only (72" to 30")	\$ 745.00 -	\$ 945.00
Base section and upper cabinets	1,020.00 -	1,140.00

Lump Sum Method:

HEATING

SECTION UIP 3

EXPLANATION

The following costs are averages of typical installations, including cost of unit, miscellaneous materials and labor included in installation, cost of roughing in necessary utilities and vents, and a pro rata share of contractor's profit and overhead through a general contractor.

Heating and cooling costs per square foot of floor area are included in the Calculator and Segregated Cost Sections.

FLOOR AND WALL FURNACES

Costs are for gas fired units. Add \$145 to \$200 per thermostat. Add \$180 to \$230 for electric ignition. Add \$145 to \$210 for circulating fan. For direct vent thru-wall or freestanding units, add \$110 to \$275.

RATED	FLOOR FURNACES		WALL FURNACES	
CAPACITY	SINGLE	DUAL	SINGLE	DUAL
25,000 B.T.U.	\$1,040		\$ 910	\$1,020
35,000	1,130	\$1,380	970	1,070
45,000	1,230	1,460	1,050	1,160
55,000	1,290	1,580	1,130	1,240
65,000	1,340	1,670	1,240	1,350
75,000		1,810		

FORCED-AIR AND GRAVITY FURNACES

Average cost of installed gas fired units with electric ignition including thermostat. Gravity and upflow furnaces will typically be at the lower end of the cost range while downflow (counterflow), horizontal and electric furnaces will be at the higher end. For high-efficiency models use higher side of the range, adding an additional \$350 for deluxe low-NO $_{\rm X}$ emission high-efficiency condensing furnaces. Add \$210 to \$305 per outlet for ducts, registers and grills. Deduct \$190 to \$255 for standing pilot ignition systems. Add 10% for oil-fired or stoker-fired units plus cost for a storage tank below. For dual chamber wood-burning units, add 100%; for outdoor wood-burning units, add 110% to 130%, larger units cost \$24.50 to \$28.50 per 1,000 B.T.U.s. See Section UIP 12 for chimneys.

RATED CAPACITY	COS RANG		RATED CAPACITY	COS RANG	
65,000 BTU . 75,000 85,000 100,000	1,930 – 2,010 –	2,750 2,925	125,000 BTU . 150,000 200,000 300,000	. 2,525 – . 3,000 –	3,575 4,325
For storage tan 275 gallons 550	\$ 880 -		1,000 gallons . 1,500		

CLOCK THERMOSTATS

Single setback thermostats will range in cost from \$165 to \$200 plus \$8.48 for each additional setback. Multistage programmable thermostats, used to automatically raise or lower temperature at preselected times, cost from \$325 to \$495. Hazardous location thermostats for controlling heating systems in explosive environments cost \$260 to \$405.

AUTOMATIC VENT DAMPERS

Automatic vent dampers cost \$285 to \$390 installed.

VENTILATION

For roof ventilators and blowers, see Section UIP 4.

© 2014 Marshall & Swift/Boeckh, LLC, all rights reserved.

SPACE HEATERS - SUSPENDED

Costs are for each gas-fired unit complete with propeller type fans, including installation. High efficiency, power vented units are at the high end of the range. Add \$345 for blower-type operation. For polytube adapter, add \$175. Add \$210 to \$350 for electric ignition. Add \$99 for propane-powered units. For oil fired units, add 150%. For steam heat costs, use Section SEG 3 or 4.

RATED CAPACITY	COST RANGE	RATED CAPACITY	COST RANGE
35,000 BTU .	\$1,120 - \$1,730	150,000 BTU	\$1,880 - \$2,525
50,000	1,290 - 1,840	175,000	1,930 - 2,750
60,000	1,330 - 1,880	200,000	2,070 - 2,975
75,000	1,380 - 2,040	250,000	2,525 - 3,450
100,000	1,480 - 2,200	300,000	2,925 - 4,025
125,000	1,630 - 2,330	400,000	4,025 - 5,800

SPACE HEATERS - FLOOR

Costs are for oil fired industrial heaters complete with fans, filters, controls, limited ductwork, storage and piping.

RATED CAPACITY	COST EACH	RATED CAPACITY	COST EACH
100,000 BTU	\$4,350	400,000 BTU	\$11,600
150,000	5,550	500,000	13,900
200,000	6,750	750,000	19,700
300.000	9.150	1.000.000	26.000

RADIANT HEATERS - SUSPENDED

Costs are for gas fired units complete with piping and controls. Continuous pipe loop systems with reflectors and vacuum pump are at the high end of the range.

RATED		COST	RATED	COST	
	CAPACITY	RANGE	CAPACITY	RANGE	
	15,000 BTU	\$1,480 - \$1,730	75,000 BTU	\$2,650 - \$3,100	
	30,000	1,730 - 2,040	100,000	2,975 - 3,575	
	45,000	1,930 - 2,330	125,000	3,775 - 4,475	
	50,000	2,040 - 2,480	150,000	4,350 - 5,100	

FANJET DISTRIBUTION

Costs are for suspended fanjets including housing. Add \$305 for motorized shutters.

FANJETS SIZE	FANJETS COST (EACH)	POLYTUBE DUCTING COST RANGE (PER LINEAR FOOT)
12"	\$ 800	\$.61 - \$.76
18"	965	.69 – .83

30"	1 380	86 - 110

VENTILATION FANS - WALL

Costs are for each fan unit complete with square or slant-wall housing. Automatic wall shutters are included at the high end of the range.

SIZE	COST RANGE	SIZE	COST RANGE
24"	\$1,210 - \$1,630	42"	\$1,730 - \$2,310
30"	1,290 – 1,760	48"	2,010 - 2,675
36"	1,570 - 2,090	54"	2,370 - 3,175

HEATING

SECTION UIP 3

SOLAR HEATING SYSTEMS

The following costs are averages, including all ducting and ancillary equipment necessary for space heating either by use of liquid transfer-type or direct air-type collector systems.

The costs for individual installations can vary greatly and every application must be examined for its own special design costs, locational considerations, varying capacity, type of absorption, medium and storage facilities employed. Any conventional backup system must be priced separately. For large commercial applications use the complete system costs only, where 5,000 to 10,000 square feet of collector area will fall within the Good cost range and 50,000 square feet and over will normally fit the Low cost range for pricing purposes.

LIQUID SYSTEM	LOW	AVG.	GOOD
Complete system based on square feet of collector area	\$ 60.00	\$ 96.00	\$ 160.00
Cost of individual component items:			
Collectors, per sq. ft	30.75	48.25	76.00
Storage tank, per gal./capacity	4.02	5.01	5.95
Pipe loops, heat exchangers, ducts and controls, complete .	7,850	12,400	19,300
Insulation, tank and pipes	1,430	2,500	4,150

AIR SYSTEM	LOW	AVG.	GOOD
Complete system based on square foot of collector area	\$ 58.00	\$ 93.00	\$ 150.00
Cost of individual component items:			
Collectors, per sq. ft	29.50	46.50	72.00
Pebble bed storage container with gravel, 200 – 400 sq. ft., each	1,900	3,025	4,975
Air handler, ducts, blowers and controls, complete	9,050	14,200	22,000
Insulation, tank and pipes	1,210	2,140	3,625

HOT WATER BOILERS

Cost are for small natural gas or propane fired cast iron boilers or generators with insulated jackets and standard controls and include pumps and gauges. For oil-fired, add 10% to 20%; electric hydronic boilers, add 25% to 40%. Deduct \$190 to \$265 for standing pilot ignition systems. For thru-wall power venting, add \$470. Costs do not include piping or electric wiring. For large commercial and industrial boilers, see Section UIP 9. Add for expansion tank below.

RATED CAPACITY	COST RANGE	
33,000 BTU	\$2,525 - \$3,250	
60,000	2,675 – 3,575	
75,000	2,750 – 3,775	
100,000	2,975 – 4,000	
125,000	3,075 – 4,275	
150,000	3,250 - 4,575	
175,000	3,400 - 4,850	

HYDRONIC EXPANSION TANKS

Costs are for high-temperature steel expansion tanks installed with a maximum working pressure of 100 to 125 PSI.

2 gallon	\$160 -	\$215	10 gallon	\$345 – \$475
5	215 –	320	15	440 – 635
7	265 –	385	20	550 - 805

HYDRONIC BASEBOARD HEATERS

Costs are for installed 7" high heaters used in hot-water systems with boilers and include tubing, panels, end caps and pivot-mounted dampers to regulate heat flow. Add \$11.00 to \$18.00 (\$44 to \$72 for 1-1/4" tube) for each corner application. For two-tier 1-1/4" tube assembly, add 50%; for three-tier, add 75%. For electric-heated hydronic, use electric baseboard costs from Page 3.

1/2" Tube

Cost Range

\$ 56 - \$ 69

65 - 83

HEAT-RECOVERY SYSTEMS

The following costs are rough averages for complete air to air heatrecovery systems. The costs for individual design systems can vary greatly due to the many variables involved.

HEATING AND COOLING

SECTION UIP 3

REFRIGERATION

The rated horsepower of the motor is approximately equivalent to the number of tons of refrigeration. One ton of refrigeration equals 12,000 B.T.U.

WINDOW UNITS

CAPACITY	COST EACH	CAPACITY	COST EACH
1/2-Ton	\$935 – \$1,110	1 Ton	\$1,460 - \$1,740
3/4	1,110 - 1,520	2	2,200 - 2,725

For units installed in wall sleeves, the cost on new work is approximately the same. For remodeling, add cost of making hole and repairing. Add \$320 for 220-volt units. Add 25% to 50% for reverse cycle (heat pump) window or wall units.

PACKAGE UNITS

Average cost includes single duct and outlet, or use of heating ducts. Add \$200 per additional ducted outlet or intake.

CAPACITY	COST EACH	CAPACITY	COST EACH
2 Ton	\$ 4,225 -\$ 4,725	7½ Ton	\$14,700 - \$16,500
3	6,200 - 6,950	10	19,300 - 21,800
5	10,100 - 11,200	15	28,400 - 32,000

COMPLETE COOLING SYSTEM

Costs are averages of engineered systems, including complete ductwork, zone controls, power, and electrical connections. Open buildings such as auditoriums, industrials, and markets will usually have a lower cost per ton than buildings requiring a larger number of temperature zones and intricate piping or ductwork such as good offices, hospitals, etc. The costs shown are medians in three cost ranges.

COST PER TON OF CAPACITY

CAPACITY	LOW	AVERAGE	GOOD
5 Ton	\$3,175	\$3,925	\$4,850
10	3,025	3,775	4,650
15	2,975	3,600	4,475
25	2,825	3,550	4,325

AIR CURTAINS

Air curtains in place, including necessary connections, cost from \$39.00 to \$65.00 per square foot of entrance opening. Add 70% to 80% for particulate filtered units and 80% to 100% for heated units.

COMBINED HEATING AND COOLING PACKAGE UNITS

Costs are averages per installation, with single duct system and necessary vents, plumbing, power, and electrical connections for each unit. Costs are for commercial split systems of gas fired, forced air heating with gas or electric refrigerated cooling, and for heat pumps (reverse cycle refrigeration). Residential-type systems will cost 20% less for a 2-ton unit to 40% less for 5 tons.

Add \$250 to \$305 for each additional ducted outlet or intake, and \$390 for each control to commercial systems only.

In cooler climates, heat pumps need supplemental heat. If supplemental electric coils are installed in ducts, add \$590 for each coil. If a complete extra heating system is used, price separately.

RATED COOLING CAPACITY	SPLIT SYSTEM	HEAT PUMP
2 Ton	\$ 6,200 - \$ 6,700	\$ 5,550 - \$ 6,050
3	9,050 - 9,700	8,150 - 8,850
5	14,400 - 15,700	13,300 - 14,400
7½	21,100 - 23,000	19,300 - 21,100
10	27,500 - 29,800	25,400 - 27,900
15	39,800 - 43,600	37,300 - 40,900
20	51,750 - 56,750	49,100 - 53,750
25	63,500 - 69,750	60,750 - 66,500
30	75,000 - 82,750	72,000 - 79,500

HEATING AND COOLING

SECTION UIP 3

COMBINED HEATING AND COOLING

ENGINEERED SYSTEMS

Costs of these systems vary greatly with climate and degree of temperature control required. Buildings with large open areas and few controls need much less ductwork and fewer control items than buildings with many subdivided rooms with individual controls. In cooler climates larger heating units are involved, while costs are listed per ton of cooling capacity. Costs are averaged medians of three cost ranges and include the complete unit, installation, power, connections, and all ancillary items.

The lowest priced installation would normally be in a sheltered area in an industrial plant or market with few separate temperature zones. The highest priced installation per ton would normally be found in good and excellent buildings with occupancies such as offices, hospitals, hotels, and others which require many temperature zones, in an open area experiencing severe wind chill.

The determining cost factors are the year round ambient temperatures and the number of temperature controls, plus the quality of equipment and design of the complete system.

AIR TERMINAL UNITS

VARIABLE AIR VOLUME

Costs are each and include reheat coils, controls and installation.

HEATING, COOLING AND VENTILATING

SECTION UIP 3

AIR-CONDITIONING REQUIREMENTS

Air conditioning requirements are greatly dependent on the occupancy of the structure. The following figures give typical quantities by occupancy in square feet per ton of cooling capacity, except as otherwise stated. Figures do not include cooling for ice making, cold storage, etc. The range of areas includes approximately 80% of all cases.

OCCUPANCY	SQUARE FEET/ TON			
Fast food restaurants, small bars and taverns .	100 – 225			
Lounges and restaurants	125 – 275			
Radio & TV stations, laboratories, barbershops, drug stores	150 – 300			
Luxury high-value residential occupancies	150 – 450			
Hospitals	180 – 280			
Specialty retail shops, dental offices	200 – 300			
Churches, auditoriums, theaters	200 – 375			
Fraternal buildings, governmental, clubhouses, country clubs	225 – 400			
Colleges, banks, department stores, libraries, museums	250 – 450			
Schools, light industrials, offices, medical offices, telephone	275 – 500			
Mortuaries, veterinary hospitals	300 – 475			
Bowling alleys, retail stores, shopping centers .	300 – 500			
Hotels, motels, post offices	280 – 450			
Discount stores, loft buildings, nursing homes $% \left(1\right) =\left(1\right) \left(1\right)$	350 – 500			
Dormitories, food markets	280 – 550			
Vocational schools, jails	400 – 600			
Residential occupancies	400 – 750			
Fire stations and service garages	550 – 750			
Food markets with energy recovery systems	600 – 750			
Auditoriums	each 15 to 25 seats			
Theaters1 ton per	each 10 to 20 seats			
Bars and taverns 1 ton per each 7 to 12 seats				

HOME AUTOMATION SYSTEMS

	COST R	ANGE
Home automation base system, one monitor and control panel for temperature, lighting, appliances and water heater control	\$ 2,480 -	\$ 5,800
Custom system, including security (2040 zones), no camera base, up to 5 additional temperature		
zones	10,700 –	15,400
Two monitors, up to 20 temperature zones	19,000 –	28,300

BUILDING AUTOMATION SYSTEMS

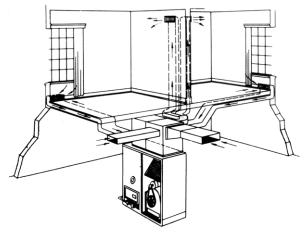

Commercial energy management or building automation system costs can vary greatly depending on the amount and sophistication of the monitoring and control equipment involved for HVAC, lighting, automation and life safety control, and energy management capabilities.

The following cost ranges are in some cases based on only a few projects and should be considered as very rough guides at best. We would suggest that whenever possible, survey, bid or contract costs should be obtained.

Should be obtained.	С	OST R	ANGE
Small buildings, under 10,000 sq. ft., total cost Single function, no computer*	\$	770 –	\$8,450
Medium buildings, under 50,000 sq. ft., total cost multifunction, stand alone (microprocessor) \dots	3,	850 –	15,400
*Note - add for computer monitoring	8,	450 –	30,500
Large buildings, over 50,000 sq. ft., fully distributed multifunction and central station			
cost per point, HVAC only		250 –	1,240
Lighting only		115 –	605
Integrated, energy, fire, security	1,	540 –	3,450

PLUMBING

SECTION UIP 3

EXPLANATION

FIXTURES

In the Segregated Cost Sections, plumbing is priced on the basis of floor area or average cost per fixture. Many times, it is desirable to give a more detailed breakdown, especially in industrial occupancies. These tables will enable the assessor to detail plumbing costs by type of fixture.

The costs listed include cost of the fixture, labor, miscellaneous materials for rough and finish, and contractor's profit and overhead. Average amounts of water, gas, and waste lines within the building are included but not exterior sewer or utility lines or meters.

Industrial plumbing may be priced from this page, but long pipe and sewer runs must be added. Including all items, industrial and warehouse costs range from \$2,650 to \$7,550 per fixture; it is recommended that if priced from the following table, add for pipe and sewer runs of over 25' per fixture. Store and office fixtures have a normal range from \$2,150 to \$4,000 per fixture and may be priced from the table in a like manner. Toilet partitions and restroom accessory costs are found in Section UIP 2.

WATER HEATERS

Residential type:	20 Gal.	30 Gal.	40 Gal.	50 Gal.	70 Gal.
Minimum, competitive	\$740	\$760	\$805	\$860

Terrazzo (marble chips)	2,800 -	3,725	3,300 -	4,275
Enameled steel	3,225 -	4,075	3,600 -	4,675
Stainless steel	3,550 -	4,550	4,050 -	5,100
Two-person wash fountains: .				
Enameled steel			1,370 -	1,910
Stainless steel			1,680 -	2,250
For infrared control, add			920 –	1,860

INSTALLED PIPE

In large buildings with few fixtures, some consideration must be given to the length of pipe runs from the fixture to the point where the pipe is stubbed out of the building. Cost of runs longer than an average of approximately 25' per fixture should be added from Section UIP 9, or the following abbreviated table. Costs are per linear foot of run including fittings and valves.

	GALVANIZED	COPPER	CAST IRON	PLASTIC
1/2"	\$ 11.05	\$ 10.35		
3/4"	13.40	12.50		
1"	18.30	15.65		
1-1/2"	23.95	23.45	\$ 18.85	\$10.75
2"	29.50	30.25	24.45	12.15
3"	42.00	53.00	29.00	16.40
4"	58.00	86.00	34.50	21.20
6"	110.00	160.00	47.25	32.00
8"			74.00	
10"			105.00	

WATER-SUPPLY METERS

Installed costs do not include piping.

TYPE	SIZE	CAPACITY	COST RANGE
Bronze, screwed	3/4"	30 gpm	\$ 230 - \$ 320
	1"	50	320 – 395
	1-1/2"	100	550 – 715
	2"	160	965 – 1,200
Bronze, flanged	3"	360	3,025 - 3,600
	4"	500	4,525 - 5,200

INDUSTRIAL SHOWERS

Average cost-in-place including rough and finish plumbing.

	ENAMELED STEEL	STAINLESS STEEL	ADD FOR RECEPTORS
Column showers:			
Circular, 5 person	\$2,925	\$4,050	\$2,250
Semicircular, 3 person .	2,340	3,175	1,820
Corner, 2 person	2,210	2,800	1,860
Multi-stall showers:			
Circular, 5 person	6,850	8,950	2,490
Semicircular, 3 person .	5,350	7,250	2,150
Corner, 2 person	4,650	6,300	1,910
Emergency shower		1,290 –	1,820
Multi-nozzle, up to 12 spra	ay	2,170 –	3,225
decontamination		5,550 -	6,750
Add for eye wash		655 –	925

For exterior foot and body shower towers, see Section UIP 13, Page 4.

GREASE INTERCEPTORS

As found in restaurants and meat packing houses. Installed costs do not include piping.

SIZE, GPM CAST IRON	CAPACITY, LB	COST	RANGE
7	14	\$1,050 -	\$1,700
15	30	1,680 –	2,800
50	100	3,600 -	5,800
FABRICATED STEEL			
100	200	\$ 6,750 -	\$ 8,950
250	500	13,000 -	16,300
500	1,000	20,900 -	25,400

SEWAGE DISPOSAL

SEPTIC TANK Average costs installed and connected in normal soil. 750 gallon . . \$ 980 – \$1.580 2.000 gallon \$ 2.725 – \$ 3.800

100 gallori	$\phi = 900 - \phi 1,300$	2,000 gallon	$\phi = 2,723 - \phi = 3,000$
1,000	1,350 - 1,960	4,000	5,950 - 7,600
1,250	1,820 - 2,420	6,000	9,050 - 11,300
1,500	2,150 - 2,925	10,000	15,200 - 19,000

Drainfields will typically cost 1 to 1.5 times the tank cost. Add 10% to 15% for elevated fields (for fill, see Section UIP 1) plus \$5,450 to \$12,600 for a grinder pump system.

Leaching lines, tile, per linear foot	\$9.75 -	\$15.60
Plastic pipe, per linear foot	5.88 -	9.75
add for gravel or stone backfill, per cubic foot	.47 –	1.49
Cesspools, \$760 plus \$29.75 per linear foot of dep	th.	

WATER WELLS

Average costs of water wells, 100 to 1,000 feet deep. Costs include drilling, casings, gravel pack, setup, testing, and miscellaneous costs up to point of actual operation excluding pumps. Costs of vertical turbine pumps are listed in Volume I, page 267. The low and high costs do not represent the minimum or maximum possible, but the centers of low and high cost ranges.

	COST PER FOOT OF DEPTH

FIRE PROTECTION

SECTION UIP 3

FIRE PUMP EQUIPMENT

HORIZONTAL SHAFT (CENTRIFUGAL, 100 PSI)

VERTICAL SHAFT (TURBINE, MULTISTAGE)

Prices include installation costs, coupling and motor or engine on a steel base, plus relief valve and waste cone. Controller must be added for electric units. Diesel engine costs include battery, trickle charger, coupling and automatic controller. Electric motors are 230/460 volt, 3 phase, 60 Hz.

The following prices include a vertical electric motor with thrust bearing. Costs for diesel engines include a right angle drive, coupler, metal skid, fuel tank, battery, trickle charger and automatic controller.

GPM	HP	RPM	ELECTRIC	DIESEL	GPM	HP	RPM	PUMP ONLY	ADD FOR ELECTRIC	ADD FOR DIESEL

1000	1,680 –	3,575	4000	3,225 –	7,300
1500	1,890 –	4,400			

Costs per square foot may be found in the Segregated Cost Sections. Refer to the section applicable to the type of building under consideration (see discussion in SEG INTRO).

COST PER HEAD								
LOW	AVERAGE	GOOD	HIGH COST					
\$220	\$285	\$385	\$500					

AUXILIARY LIGHT PACKS

Average cost in place for emergency lighting, including ancillary connections. Low end of range applies to lead acid batteries and the high end to nickel cadmium batteries.

Single	\$550 - \$	855
Double	\$555 - \$	910
Multipacks	\$710 - \$1,	130

SMOKE- AND HEAT-ACTUATED ALARM SYSTEMS

Most commercial installations are leased. The costs below represent the installation costs charged to the user. For in place costs see independent detectors under Fire Alarm Systems costs on next page. For duct type detectors use the Control Panel connected system cost range.

Commercial base cost \$1,510.00 plus \$.47 per square foot of protected areas.

Residential ionization smoke detectors cost \$105.00 to \$195.00 installed. Residential gas detectors, carbon monoxide, radon, etc., cost \$53.00 to \$110.00 installed.

Residential battery operated smoke detectors cost \$34.75 to \$100.00 installed.

FIRE PROTECTION

SECTION UIP 3

FIRE ALARM SYSTEMS

Buildings under 75' height.	COST	RANGE
Control panel at lobby	\$1,160 -	\$1,450
Add for each zone	235 –	330
Pull station	325 –	555
Smoke detector	435 –	655
Water leak detector	460 –	550
*Pull station with horn or bell alarm	150 –	185
*Pull stations	93 –	110

High-voltage unit substations, complete with transformers, breakers and grounding, cost from \$96 to \$385 per KVA.

EXAMPLES

RATING	COST	COST/ KVA	RATING	COST	COST/ KVA
150 KVA	\$ 58,250	\$385	1,000 KVA .	\$140,000	\$145
500	102,000	205	2,000	193,000	96

POWER WIRING

The following tables may be used in lieu of actual costs.

The tables indicate an estimate of the average costs installed in place. They include (where applicable) wire, fittings, hangers, bends, termination, and contractor's overhead and profit. Costs are based on a maximum height above the floor of 12'.

Power wiring for motors and motor costs are found in Section UIP 9, Page 6.

RIGID CONDUIT AND WIRING (EXPOSED)

Costs include three conductors of the maximum wire size in each size conduit. They also include: tees, ells, junction boxes, bends, hangers and fittings.

SIZE	COST/FOOT	SIZE	COST/FOOT
1/2"	\$10.90	2"	\$ 26.50
3/4"	13.05	2-1/2"	37.50

ELECTRICAL

SECTION UIP 3

GENERATORS

Costs of home generator sets including connection. Lower end of range is with rope starter. Upper end is with battery and automatic starter.

	COST	RANGE
1,000 watts	\$1,020 -	\$1,330
1,500	1,360 –	1,730
2,000	1,660 –	2,210
3,000	2,250 -	3,800
4,000	2,750 -	4,575
5,000	3,275 –	5,400
7,000	4,500 –	7,250

STANDBY POWER

Emergency generators for institutional, commercial and other buildings, complete with controls for immediate operation in the event of loss of the primary power source, cost from \$385 to \$1,590 per KW. The costs vary with the size and type of driver. 120-volt battery systems cost \$2,210 to \$3,275 per kilowatt.

EXAMPLES

RATING (GAS/ GASOLINE DRIVE	COST/ KW	RATING	DIESEL DRIVE	COST/ KW
10 KW	\$15,900	\$1,590	30 KW .	\$ 34,600	\$1,140
15	20,300	1,350	100	73,250	735
30	31,000	1,040	150	94,500	630

150	82,500	550	500	198,000	400
			750	289,000	385
			1,000	387,000	385

ELECTRICAL OUTLETS

The following costs may be used to arrive at a more detailed estimate of electrical costs than is obtained by using the costs per square foot of floor area that are given in the Segregated Cost Sections. The following costs apply to convenience and lighting outlets only, not to power wiring for equipment or heating. Cost per outlet includes allowance for service, but not for fixtures, panelboards, safety switches or circuit breakers.

Normal residential wiring will usually be in the low and average ranges, and commercial and public buildings in the average to high ranges. Large industrial buildings and warehouses with relatively few outlets and long, heavy wiring runs may run much higher on a cost-per-outlet basis. Explosion proof receptacles can run 300% to 400% more.

COST PER OUTLET

LOW	AVG.	GOOD	HIGH
\$ 57.00	\$ 68.00	\$ 83.00	\$100.00
64.00	81.00	98.00	120.00

PHOTOVOLTAIC

SECTION UIP 3

PHOTOVOLTAIC POWER SUPPLY

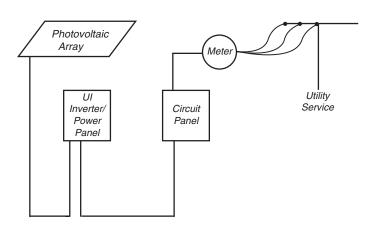

These solar power systems run from basic direct current systems, which consist of a simple solar module directly running DC equipment to Utility Inter-tie (UI) systems incorporating inverters, control panels and meters. The UI system allows the user to use the utility rather than a battery bank for storage. The excess power is sold back to the utility at a rate determined by the utility or credited to the user through the use of additional utility meters.

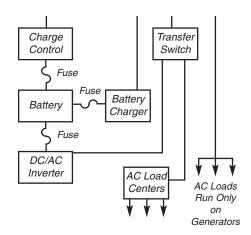

PRE-ENGINEERED RESIDENTIAL UTILITY INTER-TIE SYSTEM

Includes solar modules, inverter, panel and meter. The number of panels required is determined by several factors including power demand, percentage of solar supplementation, and available square footage. For battery backup, additional components to be added from below.

	COST	RANGE
12 - 24 module system, installed, per module .	\$1,660 -	\$ 2,210
36 - 48	1,430 -	1,810

PERCENTAGE OF TOTAL COST

The following table records the results of studies of many recently completed buildings, by occupancy, giving the percentage of total contract cost spent on the electrical items. The average used is the median and the high and low percentages which are given do

not include extremes, but are computed to include approximately 90 percent of all cases within the given range (45% each side of the median).

ROOFS

SECTION UIP 4

EXPLANATION

TYPICAL ROOFS

The general headings for roof structures in the Segregated Cost sections include the complete roof structure: rafters, purlins, sheathing or deck, bracing and ties. If a more detailed cost is needed, use the tables in this section.

WOOD RAFTERS

Cost per square foot includes necessary ties, ridges and bracing. Ceiling joists should be added. For pitched roofs, use the multipliers in the Roof Slope table. For prefabricated trussed rafters, see Page 3, in this section.

SPACING

DIMENSIONS (inches)	12" o.c.	16" o.c.	20" o.c.	24" o.c.	32" o.c.	48" o.c.

4 x 12	10.85	8.79	7.45	6.50	5.26	3.91

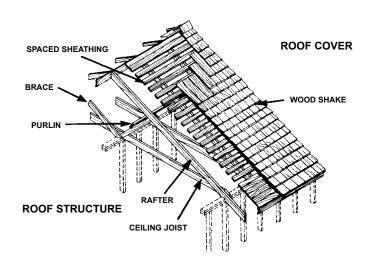

ROOF SLOPE MULTIPLIERS

For roof components of sloping roofs, multiply by the figures given below to obtain the cost per square foot of horizontal projection.

R	ISE	MULTIPLIER	RISE	MULTIPLIER
1½	to 12	1.01	6 to 12	1.12
2	to 12	1.01	8 to 12	1.20
3	to 12	1.03	12 to 12	1.42
4	to 12	1.06	15 to 12	1.60
5	to 12	1.08	18 to 12	1.80

These multipliers may also be used to convert the horizontal projected area to the actual roof area for sloping roofs.

Plywood	15' to 30'	\$6.21	\$7.50	\$9.24
Tubular steel	40' to 70'	5.77	7.06	9.52

PURLINS

Costs per linear foot of purlin including connections or hangers. Light Z or C flanges for pre-engineered metal buildings may run 30% to 50% of the structural channel costs. Light wood nailing strips for wood pole frame buildings may run 65% to 85% of the purlin costs.

					WOOD	14/17/1

15"	58.00	15"	67.00	2 x 12	4.24	8.17

STEEL SPACE FRAMES

The following square foot costs are averages of typical three dimensional roof structures for buildings requiring long two way spans. They do not apply to architectural embellishments or patented systems primarily designed for appearance and skylight areas. Costs include sheathing.

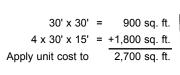

LIGHT	MEDIUM	HEAVY	
\$17.60 - \$26.50	\$25.50 - \$33.25	\$31.75 - \$48.50	

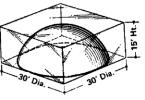

DOMES

Typical range of costs of dome structures where the dome forms both roof and walls. Cost per square foot of horizontal area which is covered, for dome structure only, excluding floor, finish, lighting, etc.

Skylight cover on metal frame, D = 5' to 40'	\$59.00 -	\$125.00
Metal geodesic, D > 70'	26.50 -	49.75
Reinforced concrete, cast-in-place	36.00 -	54.00
Thin shell, concrete	23.55 –	38.75
Wood deck and frame	18.25 –	40.00

Domes may also be estimated by adding up the unit costs of the component parts and multiplying by an area calculated by converting the dome into a rectangular structure as shown in the illustration.

SECTION UIP 4

STEEL ROOF TRUSSES

Tapered steel girders will cost from 15% to 30% less for short spans to 25% to 35% less for long spans (over 80'). Costs include end connections.

COST FOR EACH TRUSS

SPAN	LIGHT	MEDIUM	HEAVY
30'	\$ 3,075	\$ 3,775	\$ 4,575
40'	4,125	5,000	6,100
60'	6,350	7,650	9,150
80'	8,600	10,200	12,300
100'	10,700	13,000	15,500
120'		15,500	18,600
140'		18,200	21,700
160'			24,800

WOOD-TRUSSED RAFTERS

Costs are for prefabricated roof trusses common to light wood framing (12" to 48" on center) using 2" x 4" and 2" x 6" (up to 45' span) and 2" x 8", 2" x 10" and 2" x 12" (over 45' span) members, attached with steel plates or plywood gussets, including ancillary items and ties.

For pole-frame construction (8' to 14' spacing) with members 2" x 8" and larger with spans below 50', add 20%. Add 10% for site-built trusses. For double trusses, count both and deduct 5% from the total.

COST FOR EACH TRUSS			
LIGHT	MEDIUM	HEAVY	
\$ 92.00	\$ 98.00	\$105.00	
145.00	160.00	175.00	
205.00	235.00	270.00	
280.00	330.00	385.00	
365.00	430.00	510.00	
	\$ 92.00 145.00 205.00 280.00	LIGHT MEDIUM \$ 92.00 \$ 98.00 145.00 160.00 205.00 235.00 280.00 330.00	

INDUSTRIAL WOOD TRUSSES

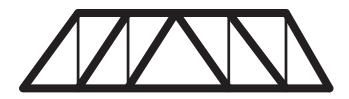

Costs are for timber or glulam industrial trusses, including end connections. For finished commercial trusses add 20% to 25%. Glued, laminated wood girders will cost approximately 25% to 50% less than bowstring trusses for short spans (up to 25'), 20% more for mid-range spans (up to 45'), to 50% to 75% more for long-span girders (up to 75'). Glued, laminated arches with ties, will cost approximately 15% to 20% less than bowstring trusses for short spans to 10% more for long spans (over 80'). Cost ranges are for trusses bearing roof loads only, not for those carrying hoists or cranes.

BOWSTRING SPAN	COST FOR EACH TRUSS					
	LIGHT	MEDIUM	HEAVY			
20'	\$ 1,140	\$ 1,340	\$ 1,490			
40'	2,825	3,250	3,800

48"	20,000	2 HP	4,950.00	5,650.00

GUTTERS AND DOWNSPOUTS

Costs are given per linear foot of gutter or downspout. For scupper and conductor head, add \$160.00 to \$270.00 each.

TYPE	COST R	ANGE
Aluminum	\$ 6.33 - 3	\$13.55
Copper or stainless steel	14.45 –	22.05
Fiberglass or vinyl	5.94 –	9.18
Galvanized steel	5.82 –	11.65
Wood	11.55 –	16.70
Add for mesh guard	1.49 –	1.96
Add for solid guard	4.70 –	7.78

FALSE-MANSARD FASCIA

False mansard framework is not normally a part of the roof structure. It can be priced on a cost per square foot of vertical projection, exclusive of sheathing and cover which can be added from Page 4.

TYPE	COST RA	NGE
Metal frame	\$7.67 - \$	14.45
Wood frame	5.26 -	9.81

For finished soffit, add \$4.70 to \$7.39 for plaster or stucco, \$2.99 to \$6.67 for wood, \$4.28 (residential) to \$7.73 for metal or vinyl, per square foot of soffit area.

FASCIA BOARD

Cost per linear foot for wood, metal or vinyl fascia boards. For residential construction, use low end of range. For 1" wood material reduce costs by 50%.

	COST RANG	Ε	COST R	ANGE
6" and less	\$2.94 - \$3.7	5 8" and over	\$3.12 -	\$5.66

STEEPLES

Costs are given per linear foot of height except where noted.

CUPOLAS

COST RANGE COST RANGE COST RANGE Copper or terne \$630 - \$1,490 \$985 - \$2,360 \$1,490 - \$3,60 Aluminum or steel . 230 - 945 330 - 1,310 515 - 1,7	LARGE (over 20')

SECTION UIP 4

ROOF SHAPES

ROOF SHAPES

THIN-SHELL REINFORCED CONCRETE

Cost ranges per square foot of horizontal area. For domes, see page 2.

	COST F	RANGE
Barrel shell	\$17.60 -	\$31.25
Folded plate	16.10 -	29.25
Hyperbolic-paraboloid, small bays	15.60 -	30.25
Large span	17.60 -	33.25

FABRIC ROOF STRUCTURES

Costs per square foot of floor area for permanent single layer fabric structures completely installed. For interior thermal liners, add \$3.65 to \$7.15 per square foot.

	COST	RANGE
Air supported	\$38.25 -	\$53.00
Tension supported	43.00 -	65.00

DORMERS

Costs of exterior construction of dormer windows and necessary dormer structure vary greatly with the size of the dormer. It may be approximated by applying 1/3 to 2/3 of the dwelling square foot cost to the horizontal area of the dormer at the dormer eave line.

MONITOR AND SAWTOOTH ROOFS

Costs of monitor and sawtooth roofs may be built up as with any other roof structure, adding for trusses if they exist and then pricing the vertical window sections as follows:

	FIXED WINDOWS	VENTED WINDOWS
Fiberglass	\$17.00 - \$21.30	\$22.95 - \$28.50
Glass	19.15 - 23.85	25.50 - 31.25
Wire glass	23.30 - 29.00	30.25 - 38.00

FIVED WINDOWS

EXPLANATION

This section is not a part of the Segregated Cost Method. It is presented here to provide a detailed cost buildup where it is felt that a specific wall being valued varies significantly from the typical walls on the Segregated Cost pages or where such detail is demanded. The costs in this section differ from the Segregated Costs of Sections SEG 1 through SEG 6 in that each individual wall component is priced separately, while the segregated wall costs include, in the one cost, an allowance for each of the following components:

- 1. BASIC WALL
- 2. EXTERIOR COVER
- 3. INTERIOR FACING
- 4. FINISH (exterior and interior)
- 5. OPENINGS (windows and doors)

Some walls will be made up of many component parts, while others may have only two or three. The examples, on the next page, illustrate the method to use in building up a total wall cost. The costs are given per square foot of actual area of the various components except as otherwise stated. If any component, such as windows or doors, does not occupy the total wall area, the unit price should be multiplied by the proportion of the area of the component to the total wall area. Costs include full allowance for the general contractor's overhead and profit however, the architect's fee must be added.

Wall costs are the sum of the costs of all their parts. Basic wall costs for wood frame, brick, stone, etc., and for wall coverings such as face brick, wood shingles, and many others, are priced for the entire wall area regardless of the number and size of openings. To these costs are added the unit costs for windows and doors. These unit costs are applied in the proportion the windows and doors bear to the entire wall area.

This principle is demonstrated in the examples. In Example 1, for instance, where 10% of the total wall area consists of windows, 10% of the unit cost for windows is applied to the total wall area. There are exceptions to the above rule. For instance, in the building elevation illustrated in Figure A, the basic wall cost would be applied only to the lower half of the wall which is shown and the window costs applied to the upper half.

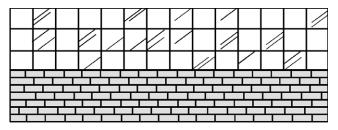

FIGURE A

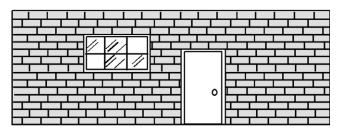

FIGURE B

Between this type of wall and the completely blank wall, there is a complete chain of gradations, which leaves much to the experience and judgment of the assessor.

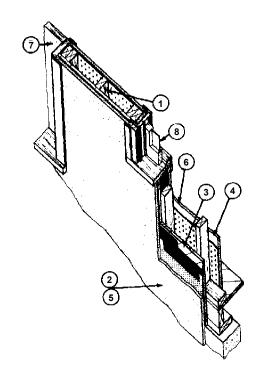

Figure B shows the front elevation of a typical industrial building, where the basic wall costs are applied to the entire wall and the cost of the windows and door is applied to the actual area of the openings.

This so called doubling of areas for computation, as in Figure B, provides an allowance for the added cost of building the wall around openings.

This section can also be used to test the proper rating choice in the Segregated Cost section. For example, the assessor may encounter a wall which is not typical either in the number of openings, type of interior finish, or some other feature. They may profitably build up the cost of that particular wall in detail and not only use the cost for that particular appraisal, but also could use it as a guide in choosing the proper rating number in the Segregated Costs when a similar wall is encountered in the future.

It is sometimes desirable to build up the cost of interior partitions instead of pricing them on a square foot basis. Some of the component parts for interior construction may be priced from this section; however, interior doors and built in cabinets should be priced from Section UIP 2.

Dutch	28.50 - 42.25
Natural finish hardwood or plastic-faced overlay	
Flush, hollow core	14.95 - 34.25
Solid core	17.25 - 37.00
Decorative, standard pattern or carved	39.00 - 51.00
Deluxe pattern or carved	53.00 - 82.00
For sidelites, use 50% of decorative door co	osts
Custom hardwood, solid core, flat panel, oak	82.00 - 105.00
Raised panel, oak	100.00 - 250.00
Teak	120.00 - 270.00
White ash	135.00 - 205.00
Philippine mahogany	180.00 - 380.00
Walnut	170.00 - 425.00
Decorative, glass lites, standard pattern	230.00 - 300.00
For plastic or metal, deduct 40%	
Custom carved	275.00 - 465.00
For triple-insulated beveled glass, add	32.75 - 49.25
For 3/4"-thick sculptured crystal glass, add	52.00 - 69.00
Solid brass adjustable sill	16.70 - 31.00
Sidelites, sq. ft. of panel area	140.00 - 230.00
Falf round or ellipse toplites	190.00 - 415.00
Rectangular toplites	110.00 - 190.00
Wood storm and screen	16.70 - 21.45
Deluxe	21.45 - 28.50
Weatherstripping, compression	1.51 – 4.12
magnetic	2.62 - 4.84
Glass patio doors, sliding or prefabricated swinging	
Aluminum, single glazed, 3/16"	14.95 - 24.50
double glazed, 5/8"	24.70 - 40.00
triple glazed	27.50 - 44.25
Wood, softwood	42.25 - 55.00
Deluxe hardwood	63.00 - 90.00
For exterior metal or vinyl cladding, add	7.16 – 10.45
For diamond grilles, add	8.95 – 12.75
For curved–top grilles, add	24.50 - 29.75
For insulated glass, add	16.15 – 21.15
For insulated Low E glass with Argon gas, add	1 28.50 - 32.00
For solar bronze or solar gray insulating	
Glass, add	10.45 – 14.65
For special glass treatments, use additives from Page	₹7.

ORNAMENTAL DOORWAYS

Cost per square foot of ornamental opening, excluding the entry door area.

	COST RANGE		
Fiberglass, stock (no lites)	\$ 39.00 -	\$ 69.00	
Wood, Stock trim	50.00 –	98.00	
Custom wood, hand carved,			
including lites	180.00 –	370.00
