Acknowledgements

This data has been collected and tabulated by Robert J. Ballard, Planning and Program Analysis Division and Howard Heideman, Taxation and Economic Policy Office (TEPO), under the general direction of Ronald C. Fisher, Deputy State Treasurer.

INCOME AND INCOME TAX DATA BY SCHOOL DISTRICT, 1982

This report presents data from income tax returns for 1982 tabulated by school district. This tabulation is based upon the school district code entered on individual income tax returns by taxpayers.

The basic income tax data are reported in Table 2, entitled "1982 Income and Net Tax Paid by School District." The data presented are federal adjusted gross income (AGI), Michigan taxable income (AGI after adjustments and minus personal exemptions), household income used for property tax credit computations, and net tax paid, that is tax liability net of credits.

This information is combined with detailed data on property tax credits for each school district, previously published in the Treasury report, Property Taxes in Michigan: Rates, Revenue and Relief, to provide the summary statistics on income, income tax and property tax credits shown in Table 1. These summary statistics include average AGI, average tax paid both before and after credits, the fraction of returns claiming a property tax credit (including farmland preservation credits), and average property tax credit for those taxpayers receiving one.

The statistics in this report should be interpreted with some caution, for several reasons. First, not all income tax returns are represented in this tabulation because 11 percent of the returns listed no school district code or a nonexistent code. These returns were excluded. Second, it was not feasible to check whether some taxpayers may have listed an incorrect school district in error. For instance, the Bloomfield Hills School District is in Oakland County, while Bloomfield District #1 and Bloomfield Township Districts #4 and #7F are in Huron County. To the extent taxpayers miscategorized themselves, the data

in those districts are incorrect.

As always, averages may give a misleading picture in some instances. A \$300 property tax credit, for example, may result from everyone receiving about a \$300 credit or from many small credits and a few very large ones. The average fiscal statistic for a district tells nothing about the distribution of that statistic among taxpayers within the district. One should also note that, in Table 2, the number of returns reported in each class is a count of returns with nonnegative values.

How To Read Table 1

School districts are grouped by county. After each fiscal statistic, the district's ranking relative to all districts for that statistic is given.

For example, Alcona School District had an average AGI of \$14,760 in 1982, placing them 486 out of 574. Similarly, the average tax after credits was \$294, 53.8 percent of tax returns received a property tax credit, while the average property tax credit was \$315, which ranked 432nd.

How To Read Table 2

Again, school districts are grouped by county. In the Alcona district, 1,891 returns had nonnegative AGI totaling \$27.9 million, 1,612 returns had nonnegative taxable income (after exemptions) totaling \$17.0 million, and 974 returns reported household income (used in computing homestead property tax credits) totaling \$10.5 million. The total net income tax paid after all credits was \$473,370.

If you have any questions or comments, please call Howard Heideman, Manager, Taxation and Economic Policy Office, (517) 373-9002.
