This data has been collected and tabulated by the Budget and Accounting Division and the Taxation and Economic Policy Office (TEPO).

INCOME, INCOME TAX, AND PROPERTY TAX CREDIT DATA
BY SCHOOL DISTRICT

1987

This report presents data from 1987 Michigan income tax returns tabulated by school district. This tabulation is based on school district codes entered by taxpayers on individual income tax returns.

The basic income tax data are reported in Table 2, "1987 Income and Net Tax Paid by School District," and Table 3, "1987 Property Tax Credits by School District." Table 2 includes federal adjusted gross income (AGI), Michigan taxable income (AGI after adjustments and minus personal exemptions), household income used for property tax credit computations, and net tax paid. Table 3 includes the several categories of property tax credits for each school district. Table 1 combines the information in Tables 2 and 3 to provide summary statistics on income, income tax, and property tax credits. These summary statistics include average AGI, average tax paid both before and after credits, the ratio of property tax credits claimed (including farmland preservation credits) to income tax returns filed, and average property tax credit and average homestead property tax credit (excluding farmland credits) for those receiving these credits.

The statistics in this report should be interpreted with some caution. Not all income tax returns are represented in this tabulation, since 15.7% of total returns and 11.6% of property tax credit claims listed no school district code or a nonexistent code. These returns were excluded. In addition, some taxpayers may have mistakenly listed an incorrect school district code. For example, the Bloomfield Hills School District is in Oakland County, while Bloomfield District #1 and Bloomfield Township Districts #4 and #7F are in Huron County. To the extent taxpayers miscategorized themselves, the data in those districts are incorrect.

Also, the average of any fiscal variable in the study for a district tells nothing about the distribution of that variable among taxpayers within the district.

Note that in Table 1, average income tax before and after credits is calculated using the number of returns with positive taxable income, and is thus not compatible with the county averages included in the 1987 income tax report.

Table 1

After each fiscal variable, the district's ranking relative to all districts for that variable is given. A ranking of 1 is given the highest average or ratio.

For example, the Alcona School District had an average AGI of \$19,130 in 1987, with a ranking of 488 out of 574 school districts. The average tax after credits was \$491. The ratio of property tax credits to income tax returns filed was 47.0%, with an average property tax credit of \$329, with a ranking of 482 among the school districts. The average homestead property tax credit, excluding farmland credits, was \$323, ranking 467th. The average homestead property tax credit is calculated using the total number of credits claimed. (Most farmland credit claimants also claim a homestead credit but are only counted once in the total number of credit claimants.)

Table 2

In the Alcona District, for example, 1,981 returns had nonnegative AGI totaling \$37.8 million; 1,633 returns had nonnegative taxable income (after adjustments and exemptions) totaling \$25.6 million; and 933 returns reported household income (used in computing homestead property tax credits) totaling \$12.6 million. The total net income tax paid after all credits was \$801,823.

If there are any questions or comments on this statistical information or its interpretation, please call Howard Heideman, Manager, Taxation and Economic Policy Office, Department of Treasury, (517) 373-9002.
